Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused Dispose of in accordance with local regulations.

products

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
None

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies Volume restriction.
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Does not comply
Eurasian Economic Union: Russian Inventory	Complies

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Poh Yue Cheong
Supersedes Date:	11-Feb-2016
Revision date	15-Mar-2021
Version	6
This SDS has been revised in the following section(s)	All sections No changes with regard to classification have been made.

SDS no. U066
Version 3
Revision date 03-Sep-2018
Supersedes Date: 28-Sep-2016

Safety Data Sheet
Mutual Solvent U66

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Mutual Solvent U66
Product code U066

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Solvent in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Dermal	Category 4
Acute toxicity - Inhalation (Vapors)	Category 4
Skin corrosion/irritation	Category 2
Serious eye damage/eye irritation	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H302 - Harmful if swallowed
H312 - Harmful in contact with skin
H315 - Causes skin irritation
H319 - Causes serious eye irritation
H332 - Harmful if inhaled

Precautionary statements
P280 - Wear protective gloves and eye/face protection
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P362 - Take off contaminated clothing and wash before reuse

Supplementary precautionary statements
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P271 - Use only outdoors or in a well-ventilated area
P330 - Rinse mouth
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P337 + P313 - If eye irritation persists: Get medical advice/attention
P403 + P235 - Store in a well-ventilated place. Keep cool
P501 - Dispose of contents/ container to an approved waste disposal plant

Contains
2-butoxyethanol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
2-butoxyethanol	203-905-0	111-76-2	60-100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion IF SWALLOWED: Rinse mouth. DO NOT induce vomiting. Get immediate medical attention.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention.

Eye Contact Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Get medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Extinguish with carbon dioxide, dry chemical, foam or waterspray.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
When heated strongly or burned, oxides of carbon and harmful organic chemical fumes are released

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. Avoid breathing vapors or mists. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil. Keep out of waterways.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Ensure adequate ventilation. Avoid contact with skin and eyes. Avoid breathing vapors or mists. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing Do not eat, drink or smoke when using this product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded Keep away from direct sunlight. Incompatible with oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Component Information

Chemical Name	Arabic	Australia	Egypt
2-butoxyethanol	25 ppm TWA 121 mg/m³ TWA	50ppmSTEL 242mg/m³STEL 20ppmTWA 96.9mg/m³TWA	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
2-butoxyethanol	Not determined	25 ppm TWA 121 mg/m³ TWA Skin notation	25 ppm ACL
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
2-butoxyethanol	5 mg/m³ MAC	Not determined	25 ppm TWA 121 mg/m³ TWA Possibility of significant uptake through the skin*1)
Chemical Name	**Malaysia**	**Philippines**	**Russia**
2-butoxyethanol	20 ppm TWA 96.7 mg/m³ TWA Skin notation*3)	skin - potential for cutaneous absorption 50 ppm TWA 240 mg/m³ TWA	5 mg/m³ MAC
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
2-butoxyethanol	50 ppm TWA	Not determined	50 ppm STEL 246 mg/m³ STEL Skin*2) 20 ppm TWA 98 mg/m³ TWA

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Safety glasses with side-shields For spills and emergencies, also wear face shield Use eye protection according to EN 166, designed to protect against liquid splashes

Hand protection
Impervious gloves made of: Rubber PVC Neoprene Be aware that liquid may penetrate the gloves. Frequent change is advisable. Wear gloves according to EN 374 resistant to the solvent(s) in use
Butyl rubber
Break through time >480 minutes
Glove thickness 0.5 mm
or
Impervious gloves of Fluorinated rubber
Break through time >480 minutes
Glove thickness mm 0.4

Respiratory protection
When workers are facing concentrations above the exposure limit they must use appropriate certified respirators In case of inadequate ventilation wear respiratory protection Use respirator with organic vapor protection (A, brown) At work in confined or poorly

ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear appropriate personal protective clothing to prevent skin contact Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information Local authorities should be advised if significant spillages cannot be contained

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Clear
Odor	Ether
Color	Colorless
Odor threshold	No information available

Property	**Values**	**Remarks**
pH	Not applicable	
pH @ dilution	No information available	
Melting / freezing point	-70 °C / -94 °F	
Boiling point/range	~170 °C / 338 °F	
Flash point	66 °C / 150.8 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	10.6 %	
Lower flammability limit	1.1 %	
Vapor pressure	0.1 kPa	@ 25 °C
Vapor density	4.1 (air = 1)	
Specific gravity	0.9 g/cm^3	25 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	~ 240 °C / 464 °F	
Decomposition temperature	> 242°C / 467.6 °F	
Kinematic viscosity	No information available	
Dynamic viscosity	3 mPa s @25 °C	
log Pow	No information available	

Explosive properties	None known
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available

VOC content(%)	100
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal conditions.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Keep away from direct sunlight.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Harmful by inhalation.
Eye contact	Causes serious eye irritation.
Skin contact	Harmful in contact with skin. May be absorbed through the skin in harmful amounts. Irritating to skin.
Ingestion	Harmful if swallowed.
Unknown acute toxicity	Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
2-butoxyethanol	1200 mg/kg (Guinea pigs)	> 2000 mg/kg (Rat)	400 ppm (Rabbit)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.

Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation. Skin contact. Eye contact. Ingestion.
Routes of entry	Inhalation. Skin absorption. Eye contact. Skin contact. Ingestion.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Target organ effects	Kidney. Central nervous system. Blood. Liver.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
2-butoxyethanol	= 2950 mg/L LC50 Lepomis macrochirus 96 h = 1490 mg/L LC50 Lepomis macrochirus 96 h	No information available	= 1698 - 1940 mg/L (LC50; Daphnia magna) = 1720 mg/L (EC50; water flea)

12.2 Persistence and degradability

Product is biodegradable.

Chemical Name	Persistence and degradability
2-butoxyethanol	Readily biodegradable

12.3 Bioaccumulative potential

The product does not contain any substances expected to be bioaccumulating.

Chemical Name	Bioaccumulation

2-butoxyethanol	Not likely to bioaccumulate

log Pow
0.81

12.4 Mobility

Mobility
Soluble in water.

Chemical Name	Mobility
2-butoxyethanol	Soluble in water

Mobility in soil
No information available.

Chemical Name	Mobility in soil
2-butoxyethanol	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

2-butoxyethanol
Schedule 6

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word

None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Sodium Chloride

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Sodium Chloride	231-598-3	7647-14-5	10-30

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors Oxides of:, Sodium, Chlorides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up

Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Sodium Chloride	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Sodium Chloride	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Sodium Chloride	5 mg/m³ MAC	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**

Sodium Chloride	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Butyl PVC Break through time >480 minutes Glove thickness =>0.5 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Slight
Color	Light amber
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available

Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium Chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium Chloride	4747 - 7824 mg/L LC50 Oncorhynchus mykiss 96 h 6420 - 6700 mg/L LC50 Pimephales promelas 96 h = 7050 mg/L LC50 Pimephales promelas 96 h 6020 -	No information available	340.7 - 469.2 mg/L EC50 Daphnia magna 48 h = 1000 mg/L EC50 Daphnia magna 48 h

	7070 mg/L LC50 Pimephales promelas 96 h = 12946 mg/L LC50 Lepomis macrochirus 96 h 5560 - 6080 mg/L LC50 Lepomis macrochirus 96 h		

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
No information available.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Water-based muds containing mixtures of products listed in Chapters 17 and/or 18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies

Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Does not comply
New Zealand (NZIoC)	Complies

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Revision date	01-Oct-2019

Supersedes Date: 23-Dec-2016

Safety Data Sheet
NaCl POLYMER SYSTEM

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name NaCl POLYMER SYSTEM
Product code 141991

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Water based system.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080
+47 51577424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Barite

Sodium Chloride

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Barite	236-664-5	13462-86-7	30-60
Sodium Chloride	231-598-3	7647-14-5	1-5
Crystalline silica (impurity)	238-878-4	14808-60-7	< 3

Comments
The product contains other ingredients which do not contribute to the overall classification.

This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. Because this product is a liquid, under normal and recommended use, exposure to Respirable Crystalline Silica will not apply.

Drilling fluid is a highly complex and variable blend of several proprietary products. Each drilling fluid is designed to meet the drilling requirements of a specific well. During the drilling process the composition and physical properties of the drilling fluid are constantly changing; therefore, a complete disclosure of a particular fluid's composition is impractical.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician	Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Barite	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Impervious gloves made of: Nitrile Neoprene PVC
Break through time >480 minutes
Glove thickness 0.5 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more

information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Viscous
Odor	Slight
Color	Light gray
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.2 - 1.6	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Barite	> 15000 mg/kg (Rat)	No data available	No data available
Sodium Chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h
Crystalline silica (impurity)	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Barite	No information available	No information available	No information available
Sodium Chloride	4747 - 7824 mg/L LC50 Oncorhynchus mykiss 96 h 6420 - 6700 mg/L LC50 Pimephales promelas 96 h = 7050 mg/L LC50 Pimephales promelas 96 h 6020 - 7070 mg/L LC50 Pimephales promelas 96 h = 12946 mg/L LC50 Lepomis macrochirus 96 h 5560 - 6080 mg/L LC50 Lepomis macrochirus 96 h	No information available	340.7 - 469.2 mg/L EC50 Daphnia magna 48 h = 1000 mg/L EC50 Daphnia magna 48 h
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

Product is biodegradable. See component information below.

Chemical Name	Persistence and degradability
Barite	Inorganic compound
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
Barite	Product/Substance is inorganic
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems. See component information below.

Chemical Name	Mobility
Barite	Insoluble in water
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Barite	Not expected to adsorb on soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Water-based muds containing mixtures of products listed in Chapters 17 and/or 18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code.
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies

Potassium Chloride	231-211-8	7447-40-7	5-10

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the

length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors Sodium oxides, Potassium oxides, Chlorides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness =>0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Liquid
Appearance No information available
Odor Odorless
Color Colorless
Odor threshold Not applicable

Property	Values	Remarks
pH	~7	
pH @ dilution	No information available	

Melting / freezing point	No information available
Boiling point/range	> 100 °C / > 212 °F
Flash point	No information available
Evaporation rate (BuAc =1)	No information available
Flammability (solid, gas)	Not applicable
Flammability Limit in Air	
Upper flammability limit	Not applicable
Lower flammability limit	Not applicable
Vapor pressure	No information available
Vapor density	No information available
Specific gravity	1.15 - 1.21
Bulk density	No information available
Relative density	No information available
Water solubility	Soluble in water
Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium Chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h
Potassium Chloride	= 2600 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium Chloride	4747 - 7824 mg/L LC50 Oncorhynchus mykiss 96 h 6420 - 6700 mg/L LC50 Pimephales promelas 96 h = 7050 mg/L LC50 Pimephales promelas 96 h 6020 - 7070 mg/L LC50 Pimephales promelas 96 h = 12946 mg/L LC50 Lepomis macrochirus 96 h 5560 - 6080 mg/L LC50 Lepomis macrochirus 96 h	No information available	340.7 - 469.2 mg/L EC50 Daphnia magna 48 h = 1000 mg/L EC50 Daphnia magna 48 h
Potassium Chloride	750 - 1020 mg/L LC50 Pimephales promelas 96 h = 1060 mg/L LC50 Lepomis macrochirus 96 h	= 2500 mg/L EC50 Desmodesmus subspicatus 72 h	= 83 mg/L EC50 Daphnia magna 48 h = 825 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Water-based muds containing mixtures of products listed in Chapters 17 and/or 18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Potassium Chloride
Schedule 4

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

This SDS is not for use in the European Union (EU).

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	10-Apr-2012
Revision date	27-May-2020
Version	2
This SDS has been revised in the following section(s)	All sections Product Code change This SDS have been made in a new database and therefore a new layout. No changes with regard to classification have been made. Updated according to GHS/CLP.

SDS no. D264
Version 2
Revision date 19-Jul-2018
Supersedes Date: 31-Oct-2017

Safety Data Sheet
Nano-Sealant D264

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Nano-Sealant D264
Product code D264

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Silicon Dioxide

Ethylene Glycol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Silicon Dioxide	231-545-4	7631-86-9	10-30
Ethylene Glycol	203-473-3	107-21-1	1-5

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating and toxic gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away

traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid excessive heat for prolonged periods of time.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Butyl Nitrile
Break through time >480 minutes
Glove thickness 0.7 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Liquid
Appearance Aqueous solution
Odor Characteristic
Color Colorless - Milky white

Odor threshold Not applicable

Property	Values	Remarks
pH	9.0 - 10.5	@ 25 °C
pH @ dilution	No information available	
Melting / freezing point	< -7 °C / -20 °F	
Boiling point/range	100 °C / 212 °F	
Flash point		
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	23 hPa (@ 20°C)	
Vapor density	No information available	
Specific gravity	No information available	@ 20 °C
Bulk density	No information available	
Relative density	1.20-1.23	@ 20°C.
Water solubility	Soluble	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	<10 mPa s	
log Pow	No information available	

Explosive properties None known
Oxidizing properties None known.

9.2 Other information

Pour point No information available
Molecular weight No information available
VOC content(%) No information available
Density No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid excessive heat for prolonged periods of time.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Silicon Dioxide	> 5000 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	> 2.2 mg/L (Rat) 1 h
Ethylene Glycol	= 4700 mg/kg (Rat)	= 9530 µL/kg (Rabbit) = 10600 mg/kg (Rat)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Skin contact. Eye contact. Inhalation. Ingestion.

Routes of entry Inhalation. Skin contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that

large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Silicon Dioxide	= 5000 mg/L LC50 Brachydanio rerio 96 h	= 440 mg/L EC50 Pseudokirchneriella subcapitata 72 h	= 7600 mg/L EC50 Ceriodaphnia dubia 48 h
Ethylene Glycol	14 - 18 mL/L LC50 Oncorhynchus mykiss 96 h = 41000 mg/L LC50 Oncorhynchus mykiss 96 h = 16000 mg/L LC50 Poecilia reticulata 96 h 40000 - 60000 mg/L LC50 Pimephales promelas 96 h = 40761 mg/L LC50 Oncorhynchus mykiss 96 h = 27540 mg/L LC50 Lepomis macrochirus 96 h	6500 - 13000 mg/L EC50 Pseudokirchneriella subcapitata 96 h	= 46300 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

No product level data available.

Chemical Name	Persistence and degradability
Silicon Dioxide	No information available

12.3 Bioaccumulative potential

No product level data available.

Chemical Name	Bioaccumulation
Silicon Dioxide	Not likely to bioaccumulate

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Ethylene Glycol

Schedule 6
Schedule 5

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Product dust may be irritating to eyes, skin and respiratory system
Suspended dust may present a dust explosion hazard

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Crystalline silica (impurity)	238-878-4	14808-60-7	<1

3.2 Mixtures

Not applicable

Comments
The product contains other ingredients which do not contribute to the overall classification.

This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Extinguish all ignition sources. Avoid sparks, flames, heat and smoking.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Take precautionary measures against static discharges. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Suspended dust may present a dust explosion hazard Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Crystalline silica (impurity)	0.1 mg/m³ TWA	0.1mg/m³TWArespirable dust	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against dusts Tightly fitting safety goggles Safety glasses with side-shields

Hand protection — Wear gloves according to EN 374 to protect against skin effects from powders
Use protective gloves made of: Neoprene Nitrile
Frequent change is advisable

Respiratory protection — In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	No information available
Odor	Odorless
Color	Tan - Brown
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	193 °C / 380 °F	PMCC
Evaporation rate (BuAc =1)	No information available	

Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.1 - 1.4	@ 20 °C
Bulk density	577–641 kg/m³ / 36–40 lb/ft3	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	Not applicable	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from open flames, hot surfaces and sources of ignition. Take precautionary measures against static charges.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Crystalline silica (impurity)	= 500 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Insoluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations

2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

WARNING

Hazard Statements
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Water

Ammonium hydrogensulfite

Sulphur Dioxide (Impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating and toxic gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Ammonium hydrogensulfite	233-469-7	10192-30-0	40-70
Water	231-791-2	7732-18-5	30-60
Sulphur Dioxide (Impurity)	231-195-2	7446-09-5	<1

Comments
Sulfur dioxide is not present as a substance. It is formed during decomposition.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Heating or fire can release toxic gas Sulphur dioxide, Nitrogen oxides (NOx), Oxides of:, Ammonia, Amines.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
This product slowly releases sulphur dioxide in contact with air. Use only in well-ventilated areas. In case of insufficient ventilation, wear suitable respiratory equipment. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents Acids Alkalis Keep at 5-30°C
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits	Exposure limit noted is for decomposition product Sulfur dioxide.

No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Respirator with combination filter for vapour/particulate (EN 141) Chemical respirator with ammonia and amines cartridge (K/P2, green filter). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Pungent Sulfur
Color	Colorless - Pale yellow
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	4.5 - 5.5	@ 20 °C
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	~ 100 °C / 212 °F	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.3	
Bulk density	No information available	
Relative density	1.25 - 1.30 kg/dm3	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Reacts violently with oxidizers. Liberates poisonous sulfur dioxide gas on contact with acid.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Keep at temperatures between 5-30°C.

10.5 Incompatible materials

Strong oxidizing agents. Acids. Alkalis.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information	Bisulfites may cause skin sensitization in sulfite sensitive persons. Bisulfites may also cause respiratory sensitization in asthmatics and sulfite sensitive persons.
Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	Causes serious eye irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.
Unknown acute toxicity	Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Water	> 90 mL/kg (Rat)	No data available	No data available
Ammonium hydrogensulfite	LD50= 2746 mg/kg - source: By analogy to product with similar composition. Notes: Related to male LD50> 2150 mg/kg By analogy	LD50> 2000 mg/kg - Duration: 24h. Source: By analogy to product with similar composition	LC50 > 5.5 mg/l - Duration: 4h. Source: By analogy to product with similar composition.

	to product with similar composition. Notes: Related to female		
Sulphur Dioxide (Impurity)	No data available	No data available	= 2500 ppm (Rat) 1 h

Sensitization Repeated or prolonged contact may cause allergic reactions in very susceptible persons.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Eye contact. Inhalation.

Routes of entry Eye contact. Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Water	No information available	No information available	No information available
Ammonium hydrogensulfite	OECD 203 Fish LC50 > 464 mg/l - Duration h: 96 - Notes: By analogy to product with similar composition	Algae EC50 = 43.8 mg/l - Duration h: 72 - Notes: By analogy to product with similar composition.	Daphnia magna EC50 = 89 mg/l - Duration h: 48 - Notes: By analogy to product with similar composition
Sulphur Dioxide (Impurity)	No information available	No information available	No information available

12.2 Persistence and degradability

Not Applicable - Inorganic chemical. See component information below.

Chemical Name	Persistence and degradability
Ammonium hydrogensulfite	Not applicable

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical. See component information below.

Chemical Name	Bioaccumulation
Ammonium hydrogensulfite	No data available

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Ammonium hydrogensulfite	No data available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated
New Zealand Hazard Classification Classified

HSNO approval no.	HSR002503 (Additives, Process Chemicals and Raw Materials (Subsidiary Hazard) Group Standard 2017.
Group number	6.4A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Skin corrosion/irritation	Category 2
Serious eye damage/eye irritation	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H315 - Causes skin irritation
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P337 + P313 - If eye irritation persists: Get medical advice/attention

Supplementary precautionary statements
P362 - Take off contaminated clothing and wash before reuse
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
Potassium hydroxide

2.3 Other hazards

Thermal decomposition can lead to release of irritating gases and vapors
Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Potassium hydroxide	215-181-3	1310-58-3	< 1

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Do not induce vomiting without medical advice. Rinse mouth. Never give anything by mouth to an unconscious person. Get immediate medical attention.
Skin contact	Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, Carbon dioxide (CO_2).

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures

Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply. No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Potassium hydroxide	Not determined	Not determined	2 mg/m³ Ceiling
Chemical Name	**India**	**Indonesian**	**Japan**
Potassium hydroxide	Not determined	2 mg/m³ STEL	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Potassium hydroxide	Not determined	2.0 mg/m³ STEL	2 mg/m³ Ceiling
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Potassium hydroxide	2 mg/m³ Ceiling	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Potassium hydroxide	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Liquid
Appearance No information available
Odor Slight

Color	Light brown
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	9.3	@ 1%
Melting / freezing point	< /= -5 °C / </= 23 °F	
Boiling point/range	No information available	
Flash point	88 °C / 190 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.02	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Dispersible	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	-37°C / -35°F
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye irritation.

Skin contact Causes skin irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Potassium hydroxide	= 284 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Skin contact. Eye contact.

Routes of entry None known.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Potassium hydroxide	= 80 mg/L LC50 Gambusia affinis 96 h	No information available	No information available

12.2 Persistence and degradability

Product is not biodegradable. See component information below.

Chemical Name	Persistence and degradability
Potassium hydroxide	Inorganic compound

12.3 Bioaccumulative potential

The product contains potentially bioaccumulating substances. See component information below.

Chemical Name	Bioaccumulation
Potassium hydroxide	Product/Substance is inorganic

12.4 Mobility

Mobility
Dispersible in water. See component information below.

Chemical Name	Mobility
Potassium hydroxide	Easily soluble

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Potassium hydroxide	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Potassium hydroxide
Schedule 6

Schedule 5

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Polyanionic cellulose

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Suspended dust may present a dust explosion hazard

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Polyanionic cellulose	Listed	Proprietary	60-100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Sodium oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment

Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Avoid dust formation. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Keep away from heat and sources of ignition.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Do not eat, drink or smoke when using this product Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Suspended dust may present a dust explosion hazard Avoid dust formation Protect from moisture Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits NUI = Nuisance dust, TWA 4mg/m³ Respirable Dust, 10mg/m³ Total Dust. No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Polyanionic cellulose	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Polyanionic cellulose	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Polyanionic cellulose	10 mg/m³ MAC	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard

present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.5 - 1.6	@ 25 °C
Bulk density	400 - 800 kg/m³	

Relative density	No information available
Water solubility	Soluble in water
Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	> 230°C / 446°F
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	Not determined

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Take precautionary measures against static charges. Avoid dust formation. Protect from moisture.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Polyanionic cellulose	= 27000 mg/kg (Rat)	> 2 g/kg (Rabbit)	> 5800 mg/m³ (Rat) 4 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Polyanionic cellulose	No information available	No information available	No information available

12.2 Persistence and degradability

Product is biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class Not regulated

IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group
ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

Safety Data Sheet
POLY-PLUS* 2000

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name POLY-PLUS* 2000
Product code PID10571
Country Limitations This SDS is not for use in EU/EEA.

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Viscosifier. Shale inhibitor. Fluid loss reducer.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080
+47 51577424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic

Alcohol, C11-14-iso-, C13-rich, ethoxylated

Hydrocarbons, C11-C12, isoalkanes, <2% aromatics

Naphtha (petroleum), hydrotreated heavy

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Contaminated surfaces will be extremely slippery

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	610-193-9	445411-73-4	<25
Alcohol, C11-14-iso-, C13-rich, ethoxylated	Polymer	78330-21-9	<3
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	265-150-3	64742-48-9	<10
Naphtha (petroleum), hydrotreated heavy	265-150-3	64742-48-9	<10

Comments
The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.

Based on test data - Eye Irritation (OECD 405), this product is not irritant.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Fire or high temperatures create:, Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid) may be produced in the event of combustion in an oxygen deficient atmosphere.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special
Extremely slippery when spilled.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Contaminated surfaces will be extremely slippery.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Do not flush with water. Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. Extremely slippery when spilled.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Keep away from direct sunlight. Protect from freezing Avoid contact with: Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	Hydrocarbons, C11-C12, isoalkanes, <2% aromatics: OSHA: 400 mg/m^3 (8 hrs) Naphtha (petroleum), hydrotreated heavy: OSHA: 400 mg/m^3 (8 hrs) No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will

vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene PVC Break through time >480 minutes Glove thickness >=0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Viscous
Odor	Faint hydrocarbon
Color	Milky
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	5 - 8	@ 5 g/l
Melting / freezing point	< 5 °C / < 41 °F	
Boiling point/range	> 100 °C / > 212 °F	
Flash point	Does not flash	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	2.3 kPa	@ 20 °C
Vapor density	0.804 g/litre	@ 20 °C
Specific gravity	No information available	
Bulk density	No information available	

Relative density	1.0 - 1.2	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	> 150°C / > 302°F	
Kinematic viscosity	> 20.5 cSt	@ 40 °C
Dynamic viscosity	No information available	
log Pow	Not determined	

Explosive properties	Not applicable
Oxidizing properties	Not applicable

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from open flames, hot surfaces and sources of ignition. Keep away from direct sunlight. Protect from freezing.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	> 5000 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	> 2.3 mg/L (Rat)
Alcohol, C11-14-iso-, C13-rich, ethoxylated	> 2000 mg/kg (Rat)	> 2000 mg/kg (Rat)	No data available
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	> 6000 mg/kg (Rat)	> 3160 mg/kg (Rabbit)	> 8500 mg/m³ (Rat) 4 h
Naphtha (petroleum), hydrotreated heavy	> 6000 mg/kg (Rat)	> 3160 mg/kg (Rabbit)	> 8500 mg/m³ (Rat) 4 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	No information available	No information available	No information available
Alcohol, C11-14-iso-, C13-rich, ethoxylated	No information available	No information available	No information available
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	= 2200 mg/L LC50 Pimephales promelas 96 h	No information available	= 2.6 mg/L LC50 Chaetogammarus marinus 96 h
Naphtha (petroleum), hydrotreated heavy	= 2200 mg/L LC50 Pimephales promelas 96 h	No information available	= 2.6 mg/L LC50 Chaetogammarus marinus 96 h

12.2 Persistence and degradability

Not readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	Readily biodegradable OECD 301B 68.1% 28 days
Alcohol, C11-14-iso-, C13-rich, ethoxylated	Readily biodegradable
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	Inherently biodegradable
Naphtha (petroleum), hydrotreated heavy	OECD 301 : 31.5% 28 days

12.3 Bioaccumulative potential

The product does not contain any substances expected to be bioaccumulating. See component information below.

Chemical Name	Bioaccumulation
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	No information available
Alcohol, C11-14-iso-, C13-rich, ethoxylated	No information available
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	log Pow : 6.7-7.2
Naphtha (petroleum), hydrotreated heavy	No information available

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems. See component information below.

Chemical Name	Mobility
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	No information available
Alcohol, C11-14-iso-, C13-rich, ethoxylated	Soluble in water
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	No data available
Naphtha (petroleum), hydrotreated heavy	No data available

Mobility in soil
No information available.

Chemical Name	Mobility in soil
Gas oils (petroleum), vacuum, hydrocracked, hydroisomerized, hydrogenated, C10-25, branched and cyclic	No information available
Alcohol, C11-14-iso-, C13-rich, ethoxylated	No information available
Hydrocarbons, C11-C12, isoalkanes, <2% aromatics	No information available
Naphtha (petroleum), hydrotreated heavy	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Suspended dust may present a dust explosion hazard

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Material becomes extremely slippery when wet.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up

Sweep up and shovel into suitable containers for disposal. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes extremely slippery when wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Suspended dust may present a dust explosion hazard Avoid contact with: Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Repeated or prolonged contact Use protective gloves made of: Nitrile Neoprene PVC Frequent change is

	advisable
Respiratory protection	No protective equipment is needed under normal use conditions In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Granular
Appearance	Powder Dust
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	5-9	@ 5 g/l
Melting / freezing point	> 150 °C / 302 °F	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.25 - 1.40	20 °C
Bulk density	641-737 kg/m³ / 40 - 46 lb/ft³	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	> 150 °C / 302 °F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Take precautionary measures against static charges. Avoid dust formation. Keep away from open flames, hot surfaces and sources of ignition.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat) (PRODUCT)
LD50 Dermal	> 5000 mg/kg (rat) (PRODUCT)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Product is not biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility

Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)

This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains , No hazardous components
2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. If spilled, take caution, as material can cause surfaces to become very slippery.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Large spills released to the environment may disturb the natural chemical balance of soil/fresh water.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up

Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. If spilled, take caution, as material can cause surfaces to become very slippery.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture Avoid contact with: Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Repeated or prolonged contact Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Granules Dust
Odor	None
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	6.0 - 8.0	@ 1% solution
Melting / freezing point	> 150 °C / > 302 °F

Density	No information available

Comments

The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat)
LD50 Dermal	> 5000 mg/kg (rat)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
IC50/Scenedesmus subspicatus/72 hrs > 100 mg/L (OECD201.

Toxicity to fish
LC50/Danio rerio/96 hrs > 100 mg/L (OECD203)
LC50/Oncorhynchus mykiss/96 hrs > 100 mg/L (OECD203).

Toxicity to daphnia and other aquatic invertebrates
EC50/Daphnia magna/48 hrs > 100 mg/L OECD202).

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

log Pow
-2

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil

No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Suspended dust may present a dust explosion hazard
Contaminated surfaces will be extremely slippery

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid) may be produced in the event of combustion in an oxygen deficient atmosphere.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Contaminated surfaces will be extremely slippery.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Avoid dust formation. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes extremely slippery when wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Suspended dust may present a dust explosion hazard Avoid heat, flames and other sources of ignition. Protect from moisture Avoid contact with: Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields

Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene PVC Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Granules
Odor	Slight Hydrocarbon-like
Color	White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	Not applicable	
pH @ dilution	7.7	@ 1% sol.
Melting / freezing point	> 150 °C / > 302 °F	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.25 - 1.40	20 °C
Bulk density	641–737 kg/m³ (40–46 lb/ft²)	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	> 150 °C / > 302 °F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	-2	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Take precautionary measures against static charges. Avoid heat, flames and other sources of ignition. Protect from moisture. Avoid dust formation.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat) (MIXTURE)
LD50 Dermal	> 5000 mg/kg (rat) (MIXTURE)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.
IC50/Scenedesmus subspicatus/72 hrs: > 100 mg/l (OECD 201).

Toxicity to fish
This product is not considered toxic to fish.
LV50/Danio rerio/96 hrs: > 100 mg/l (OECD 203)
LC50/Fathead minnow/96 hrs: > 100 mg/l (OECD 203).

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.
EC50/Daphnia magna/48 hrs.: > 100 mg/l (OECD202).

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

log Pow

-2

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required.
Group number	Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	920-107-4	RM1003179	30-60
Isotridecanol, ethoxylated	NLP	69011-36-5	<3

Comments
OECD Test No. 437: Bovine Corneal Opacity and Permeability Test Method for Identifying i) Chemicals Inducing Serious Eye Damage and ii) Chemicals Not Requiring Classification for Eye Irritation or Serious Eye Damage: Not Irritant

The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.

.

The product contains other ingredients which do not contribute to the overall classification.

*Substances which have an EC Number that begins with the number "9" is a Provisional List Number. The list numbers published by ECHA do not have any legal significance. The EC substance definition and related classification & labelling has been developed in the framework of the Regulation (EC) No 1907/2006 (REACH). For information about the related CAS number see section 15 of this SDS.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. If spilled, take caution, as material can cause surfaces to become very slippery.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Do not eat, drink or smoke when using this product Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Keep away from direct sunlight. Avoid contact with: Oxidizing agents Protect from freezing Keep at >5 - <30°C
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	Oil mist (mineral) workplace exposure limits are currently under review by legislative authorities. This workplace exposure limit (WEL) standard is applicable to highly refined mineral oils and is provided as a guidance limit only LT. EXP = 5mg/m^3 and ST. EXP = 10mg/m^3. No biological limit allocated

Component Information

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: PVC Nitrile Neoprene
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Viscous
Odor	Hydrocarbon-like
Color	Milky
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	8.0 - 9.0	@ 1%
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	> 93.3 °C / > 200 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	0.002 mmHg	@ 20°C (68°F) °C
Vapor density	No information available	
Specific gravity	1.07 - 1.10	20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	> 20.5 cSt	@ 40 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	-28.9°C / -20°F
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from direct sunlight. Avoid frost. Keep at temperatures between >5-<30°C. Avoid heat, flames and other sources of ignition.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information OECD Test No. 437: Bovine Corneal Opacity and Permeability Test Method for Identifying i) Chemicals Inducing Serious Eye Damage and ii) Chemicals Not Requiring Classification for Eye Irritation or Serious Eye Damage: Not Irritant.

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	> 5000 mg/kg (OECD 401), Rat	> 5000 mg/kg (OECD 402), Rabbit	= 4951 mg/kg (OECD 403) 4H, Rat
Isotridecanol, ethoxylated	500-2000 mg/kg Rat	> 2000 mg/kg	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
IC50- 72 hours: > 100 mg/l (PRODUCT).

Toxicity to fish
LC50 - Oncorhynchus mykiss - 96 hours: > 100 mg/l (PRODUCT).

Toxicity to daphnia and other aquatic invertebrates
EC50 - Daphina - 48 hours: > 100 mg/l (PRODUCT).

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	> 1000 mg/l (OECD 201) Oncorhynchus mykiss/96 hours	> 1000 mg/l (OECD 201) Pseudokirchneriella subcapitata/72 hours	> 1000 mg/l (OECD 202) Daphnia magna/48 hours
Isotridecanol, ethoxylated	= 1-10 mg/l (OECD 203) Cyprinus carpio/96 hours	= 1-10 mg/l (OECD 201) Desmodesmus subspicatus/72 hours	= 1-10 mg/l (OECD 202) Daphnia magna/72 hours

12.2 Persistence and degradability

Readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	Readily biodegradable
Isotridecanol, ethoxylated	Readily biodegradable

12.3 Bioaccumulative potential

Bioaccumulation is unlikely. See component information below.

Chemical Name	Bioaccumulation
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	Does not bioaccumulate
Isotridecanol, ethoxylated	Does not bioaccumulate

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems. See component information below.

Chemical Name	Mobility
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	Insoluble
Isotridecanol, ethoxylated	Practically insoluble

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Hydrocarbons, C12-C15, n-alkanes, isoalkanes < 2% aromatics*	No information available
Isotridecanol, ethoxylated	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated
New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies

Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

CAS Number 64742-47-8 can be used to identify the substance given a list number in section 3 in areas not subject to the REACH regulation.

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards

Chronic aquatic toxicity	Category 3

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
H412 - Harmful to aquatic life with long lasting effects

Precautionary statements
P273 - Avoid release to the environment
P280 - Wear protective gloves/protective clothing/eye protection/face protection

-

Contains
Starch

Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Starch	Listed	Proprietary	60-100
Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione	208-576-7	533-74-4	< 1

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Material becomes slippery when wet. Use caution if wet.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Take precautionary measures against static discharges. Avoid dust formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Suspended dust may present a dust explosion hazard Protect from moisture Avoid contact with: Strong oxidizing agents Sulfuric acid.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Starch	10 mg/m³ TWA	10mg/m³TWAinhalable dust	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	Odorless
Color	Off-white
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	4-7	1%
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.5	
Bulk density	300-700 kg/m^3 (19-44 lb/ft3)	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties Suspended dust may present a dust explosion hazard
Oxidizing properties No information available

9.2 Other information

Pour point No information available
Molecular weight No information available
VOC content(%) No information available
Density No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Take precautionary measures against static charges. Protect from moisture. Avoid dust formation.

10.5 Incompatible materials

Strong oxidizing agents. Sulfuric acid.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Starch	No data available	No data available	No data available
Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione	= 550 mg/kg (Rat)	= 7 g/kg (Rabbit)	= 8400 mg/m³ (Rat) 4 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Harmful to aquatic life with long lasting effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Starch	No information available	No information available	No information available
Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione	0.12 - 0.21 m LC50 Oncorhynchus mykiss 96 h 10.0 - 22.0 mg/L LC50 Cyprinus carpio 96 h 12 - 31.7 mg/L LC50 Oncorhynchus mykiss 96 h 0.2 - 0.4 mg/L LC50 Lepomis macrochirus 96 h	= 1 mg/L EC50 Desmodesmus subspicatus 96 h	0.26 - 0.37 mg/L EC50 Daphnia magna 48 h 9.5 - 14.8 mg/L EC50 Daphnia magna 48 h = 0.3 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione
Schedule 6

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to

hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Dry chemical, CO_2, water spray or regular foam.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. If spilled, take caution, as material can cause surfaces to become very slippery.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading and keep powder dry.

Methods for cleaning up
Take precautionary measures against static discharges. Sweep up and shovel into suitable containers for disposal. Avoid dust formation. Material becomes slippery when wet. Use caution if wet. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. If spilled, take caution, as material can cause surfaces to become very slippery. May cause sensitization of susceptible persons.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Take precautionary measures against static discharges. Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Protect from moisture Avoid contact with: Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Avoid dust formation. Avoid contact with heat, sparks, open flame, and static discharge.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation. Repeated or prolonged skin contact may cause allergic reactions with susceptible persons.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Starch	No data available	No data available	No data available

Sensitization Repeated or prolonged contact may cause allergic reactions in very susceptible persons.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Skin contact. Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Starch	No information available	No information available	No information available

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

This SDS is not for use in EU/EEA.

16. Other Information

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Material becomes slippery when wet. Use caution if wet.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations. Refer to applicable federal, state and local regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Swells on contact with water. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with

water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep at 0-35°C Avoid contact with: Oxidizing agents Strong acids
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Local exhaust ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	None
Color	White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	> 150 °C / > 302 °F	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	0.8 - 1.0	
Bulk density	0.65 - 0.75	
Relative density	No information available	
Water solubility	Insoluble in water Swells on contact with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	> 150°C / 302°F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available

VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep at temperatures between 0-35°C.

10.5 Incompatible materials

Oxidizing agents. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat) (MIXTURE)
LD50 Dermal	> 5000 mg/kg (rat) (MIXTURE)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.

Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
IC50/Scenedesmus subspicatus/72 hrs > 100 mg/L (OECD201.

Toxicity to fish
LC50/Danio rerio/96 hrs > 100 mg/L (OECD203)
LC50/Oncorhynchus mykiss/96 hrs > 100 mg/L (OECD203).

Toxicity to daphnia and other aquatic invertebrates
EC50/Daphnia magna/48 hrs > 100 mg/L OECD202).

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

log Pow
-2

12.4 Mobility

Mobility
Insoluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Classified
HSNO approval no.	Not required.
Group number	Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Does not comply
Japan (ENCS)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Hydrocarbon.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away

traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Protect from freezing Avoid extreme temperatures Keep away from direct sunlight.
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established.

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Use protective gloves made of: Nitrile Neoprene Break through time >480 minutes Glove thickness 0.4 mm

	Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Milky
Odor	Mild
Color	White
Odor threshold	No information available

Property	Values	Remarks
pH	5 - 8	
pH @ dilution	No information available	
Melting / freezing point	0 °C / 32 °F	
Boiling point/range	100 °C / 212 °F	
Flash point	> 93 °C / 200 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	17.5 mmHg	@ 20 °C
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	1.03	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from freezing. Avoid extreme temperatures. Keep away from direct sunlight.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.

Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	None known.
Routes of entry	No route of entry noted.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

This SDS is not for use in the European Union (EU).

16. Other Information

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Skin sensitization	Category 1

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H317 - May cause an allergic skin reaction

Precautionary statements
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P272 - Contaminated work clothing should not be allowed out of the workplace
P280 - Wear protective gloves and eye/face protection
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P333 + P313 - If skin irritation or rash occurs: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P362 + P364 - Take off contaminated clothing and wash it before reuse

Contains
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	mixture	55965-84-9	< 0.005

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth

to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention if irritation occurs.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Hydrocarbon.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. Persons susceptible to allergic reactions should not handle this product.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Protect from freezing

Storage class Chemical storage.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits The product does not contain any hazardous materials with occupational exposure limits established.

Component Information

Chemical Name	Arabic	Australia	Egypt
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**

5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	Not determined	Not determined	Not determined

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection — Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection — No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Slight
Color	Milky white

Property	**Values**	**Remarks**
pH	10	conc. sol.
pH @ dilution	No information available	
Melting / freezing point	0 °C / 32 °F	
Boiling point/range	100 °C / 212 °F	
Flash point	> 100 °C / > 212 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability	Not applicable	
Explosion limits:		
Upper explosion limit	No information available	
Lower explosion limit	No information available	
Vapor pressure	17.5 mmHg	@ 20 °C
Relative Vapor Density	No information available	
Specific gravity	1.02	
Bulk density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
Partition Coefficient (n-octanol/water)	No information available	
Density and/or Relative Density	No information available	
Explosive properties	Not applicable	
Oxidizing properties	None known.	

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Protect from freezing.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one	= 53 mg/kg (Rat)	No data available	= 1.23 mg/L (Rat) 4 h = 0.11 mg/L (Rat) 4 h

Sensitization May cause sensitization by skin contact.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Skin contact.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

11.2 Information on other hazards

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish. LC50 (96 hrs): 16188 mg/l (estimated).

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates. EC50 (48 hrs): 7471 mg/l (estimated).

Toxicology data for the components

12.2 Persistence and degradability
Not readily biodegradable.

12.3 Bioaccumulative potential
No product level data available.

12.4 Mobility
Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
No information available.

12.5 Other adverse effects
None known.

12.6 Other information.
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Maritime transport in bulk according to IMO instruments

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-4-isothiazolin-3-one
Schedule 6

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Seek medical attention if irritation occurs.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Chlorides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment

Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents Strong acids Strong alkalies.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	

Specific gravity	1.01 - 1.17
Bulk density	No information available
Relative density	No information available
Water solubility	Soluble in water
Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids. Strong alkalies.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Potassium Chloride	= 2600 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Listed on PLONOR list of OSPAR

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Potassium Chloride	750 - 1020 mg/L LC50 Pimephales promelas 96 h = 1060 mg/L LC50 Lepomis macrochirus 96 h	= 2500 mg/L EC50 Desmodesmus subspicatus 72 h	= 83 mg/L EC50 Daphnia magna 48 h = 825 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
The product has been assessed and contained in Chapters 17/18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Ship Type:- 3. Pollution Category:- Z. Proper Shipping Name: Potassium chloride solution

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Potassium Chloride
Schedule 4

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

Safety Data Sheet
Potassium Chloride M117

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Potassium Chloride M117
Product code M117

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Clay control agent in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating and toxic gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust.

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Eye protection must conform to standard EN 166 Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Neoprene Nitrile Rubber Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Crystalline
Odor	Very faint
Color	White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	Not applicable	
pH @ dilution	8-11	H2O soln
Melting / freezing point	770 °C / 1418 °F	
Boiling point/range	Not applicable	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	Not applicable	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	1.100 kg/m³	
Relative density	1.989 g/cm³	
Water solubility	300 g/l	@ 20 °C
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation.

10.5 Incompatible materials

No information available.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Repeated exposure may cause skin dryness or cracking.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.
Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation. Skin contact. Eye contact.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Large amounts will affect pH and harm aquatic organisms

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains No hazardous components
2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. If spilled, take caution, as material can cause surfaces to become very slippery. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Avoid dust formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. If spilled, take caution, as material can cause surfaces to become very slippery.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep away from heat, sparks, and flame. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture Avoid contact with: Strong oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces,

respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	Slight
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available

Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	1.5 sg	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	~351 °C / ~663.8 °F	
Decomposition temperature	~175°C / ~347°F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Avoid dust formation. Heat, flames and sparks.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat) (product)
LC50 Inhalation	> 5 mg/l (dust) (rat, 4 hr)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Product is biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Does not comply
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	03-Sep-2015
Revision date	28-Jun-2017
Version	3
This SDS has been revised in the following section(s)	4, 8, 9, 10, 11, 15, 16 No changes with regard to classification have been made.

Version 9
Revision date 13-Mar-2019
Supersedes Date: 07-Jul-2018

Safety Data Sheet
PTS-200*

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name PTS-200*
Product code PID4

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Temperature stabilizer.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080
+47 51577424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Dermal	Category 4
Acute toxicity - Inhalation (Dusts/Mists)	Category 4
Skin corrosion/irritation	Category 1 Subcategory 1B
Serious eye damage/eye irritation	Category 1
Specific target organ toxicity - Single exposure	Category 3

Environmental hazards

Acute aquatic toxicity	Category 3

Physical Hazards Not classified

2.2 Label elements

Signal word
DANGER

Hazard Statements
H302 - Harmful if swallowed
H312 - Harmful in contact with skin
H314 - Causes severe skin burns and eye damage
H332 - Harmful if inhaled
H335 - May cause respiratory irritation
H412 - Harmful to aquatic life with long lasting effects

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P273 - Avoid release to the environment
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician

Supplementary precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P271 - Use only outdoors or in a well-ventilated area
P301 + P330 + P331 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P302 + P350 - IF ON SKIN: Gently wash with plenty of soap and water
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P312 - Call a POISON CENTER or doctor/physician if you feel unwell
P330 - Rinse mouth
P363 - Wash contaminated clothing before reuse
P403 + P233 - Store in a well-ventilated place. Keep container tightly closed
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
2-aminoethanol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of toxic and corrosive gases/vapors

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
2-aminoethanol	205-483-3	141-43-5	60-100

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. If not breathing, give artificial respiration. Seek medical attention at once.

Ingestion Do NOT induce vomiting. Get immediate medical attention. Rinse mouth. Risk of product entering the lungs on vomiting after ingestion. Never give anything by mouth to an unconscious person.

Skin contact Promptly wash contaminated skin with soap or mild detergent and water. Promptly remove clothing if soaked through and wash as above. Burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Chemical burns must be treated by a physician.

Eye Contact Remove contact lenses, if worn. Immediately flush eyes with water for 15 minutes while holding eyelids open. Immediate medical attention is required.

4.2. Most important symptoms and effects, both acute and delayed

General advice Seek medical attention for all burns, regardless how minor they may seem. The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use halon type extinguisher.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Ammonia.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Do not get on skin or clothing. Wash thoroughly after handling. Do not breathe vapors or spray mist. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Contain and collect spillage with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local/national regulations (see Section 13).

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin, eyes and clothing. Avoid spills and splashing during use. Prevent the formation of vapors, mists and aerosols. Do not breathe vapors or spray mist.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong acids Strong oxidizing agents Nitrites Aluminum Copper Carbon steel Avoid extreme temperatures Keep away from direct sunlight.

Storage class Corrosive storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

2-aminoethanol	3 ppm TWA	8 mg/m³ TWA 15 mg/m³ STEL	3 ppm STEL 7.6 mg/m³ STEL Skin 1 ppm TWA 2.5 mg/m³ TWA

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical

hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Chemical splash goggles and/or face shield
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Break through time >480 minutes Glove thickness 0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Amine
Color	Colorless
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	11.5 - 12	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	171 °C / 340 °F	
Flash point	> 96 °C / > 205 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	70 hPa	@ 20 °C

Vapor density	No information available
Specific gravity	1.0 - 1.02
Bulk density	No information available
Relative density	No information available
Water solubility	Soluble in water
Solubility in other solvents	No information available
Autoignition temperature	Not applicable
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Corrosive.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Not known.

10.4 Conditions to avoid

Avoid extreme temperatures. Keep away from direct sunlight.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids. Nitrites. Aluminum. Copper. Carbon steel.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Harmful by inhalation. Corrosive to the respiratory tract. May cause respiratory irritation. Vapours are corrosive. After 24-36 hours, injured persons may develop serious shortness of

	breath and lung oedema. Vapours irritate the respiratory system, and may cause coughing and difficulties in breathing.
Eye contact	Causes serious eye damage. May cause irreversible damage to eyes.
Skin contact	Harmful in contact with skin. Causes severe skin burns. May be absorbed through the skin in harmful amounts.
Ingestion	Harmful if swallowed. Can burn mouth, throat, and stomach.
Unknown acute toxicity	Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
2-aminoethanol	= 1720 mg/kg (Rat)	= 1000 mg/kg (Rabbit) = 1 mL/kg (Rabbit)	> 1.3 mg/l Vapour 6h (Rat)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Skin contact. Eye contact. Ingestion. Inhalation.
Routes of entry	Ingestion. Inhalation. Skin contact. Eye contact.
Specific target organ toxicity - Single exposure	Category 3
Specific target organ toxicity - Repeated exposure	Not classified.
Target organ effects	Respiratory system.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Harmful to aquatic life with long lasting effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates

See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
2-aminoethanol	> 200 mg/L LC50 Oncorhynchus mykiss 96 h = 3684 mg/L LC50 Brachydanio rerio 96 h 300 - 1000 mg/L LC50 Lepomis macrochirus 96 h 114 - 196 mg/L LC50 Oncorhynchus mykiss 96 h = 227 mg/L LC50 Pimephales promelas 96 h	= 15 mg/L EC50 Desmodesmus subspicatus 72 h	= 65 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
2-aminoethanol	Readily biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
2-aminoethanol	Does not bioaccumulate log Kow -1.91

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

.

.

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG)	UN2491
UN No. (IMDG/ANTAQ)	UN2491
UN No. (ICAO/ANAC)	UN2491

14.2. UN proper shipping name
Ethanolamine solution

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	8
IMDG/ANTAQ Hazard class	8
ICAO/ANAC Hazard class/division	8

14.4 Packing group

ADR/RID/ADN/ADG Packing group	III
IMDG/ANTAQ Packing group	III
ICAO/ANAC Packing group	III

14.5 Environmental hazard
No

14.6 Special precautions

Hazard identification no (ADR)	80
EmS (IMDG)	F-A, S-B
Emergency Action Code (EAC)	2X
Tunnel restriction code	(E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

2-aminoethanol
Schedule 4
Schedule 6
Schedule 5

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR002984 (Ethanolamine, >26% in a non hazardous diluent)
Group number	N/A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature

Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Suspended dust may present a dust explosion hazard.

Hazardous combustion products
Fire or high temperatures create: Sulphur oxides, Carbon oxides (COx), Heating or fire can release toxic gas.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Extinguish all ignition sources. Avoid sparks, flames, heat and smoking.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Strong oxidizing agents Strong acids Strong alkalies.
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established.

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Eye protection must conform to standard EN 166 Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Rubber Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder
Odor	Faint
Color	Brown
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	4 - 5	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.2	20 °C
Bulk density	480 kg/m³	
Relative density	No information available	
Water solubility	Soluble	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Take precautionary measures against static charges. Avoid heat, flames and other sources of ignition.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids. Strong alkalies.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough. May cause irritation of respiratory tract.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Repeated exposure may cause skin dryness or cracking.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Inhalation. Skin contact. Eye contact.
Routes of entry	Inhalation.

Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required
Group number	Not required

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Muriel Martin Beurel
Supersedes Date:	17-Nov-2015
Revision date	15-Jan-2020
Version	6
This SDS has been revised in the following section(s)	All sections No changes with regard to classification have been made.

SDS no. D111
Version 6
Revision date 13-Nov-2019
Supersedes Date: 01-Aug-2016

Safety Data Sheet
RFC Agent D111

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name RFC Agent D111
Product code D111

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Skin corrosion/irritation	Category 1
Serious eye damage/eye irritation	Category 1

Environmental hazards Not classified

Physical Hazards

Corrosive to Metals	Category 1

2.2 Label elements

Signal word
DANGER

Hazard Statements
H314 - Causes severe skin burns and eye damage
H290 - May be corrosive to metals

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician
P406 - Store in corrosion resistant container with a resistant inner liner

Supplementary precautionary statements
P234 - Keep only in original container
P264 - Wash face, hands and any exposed skin thoroughly after handling
P301 + P330 + P331 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P363 - Wash contaminated clothing before reuse
P390 - Absorb spillage to prevent material damage
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
Aluminum sulfate hydrate

Iron sulphate

Sulfuric acid

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Aluminum sulfate hydrate	233-135-0	10043-01-3	30-60
Iron sulphate	231-753-5	7720-78-7	1-5
Sulfuric acid	231-639-5	7664-93-9	1-5

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. If not breathing, give artificial respiration. Seek medical attention at once.

Ingestion Do NOT induce vomiting. Get immediate medical attention. Rinse mouth. Risk of product entering the lungs on vomiting after ingestion. Never give anything by mouth to an unconscious person.

Skin contact Promptly wash contaminated skin with soap or mild detergent and water. Promptly remove clothing if soaked through and wash as above. Burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Chemical burns must be treated by a physician.

Eye Contact Remove contact lenses, if worn. Immediately flush eyes with water for 15 minutes while holding eyelids open. Immediate medical attention is required.

4.2. Most important symptoms and effects, both acute and delayed

General advice Seek medical attention for all burns, regardless how minor they may seem. The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of toxic and corrosive gases/vapors Sulphur oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Do not get on skin or clothing. Wash thoroughly after handling. Do not breathe vapors or spray mist. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Contain and collect spillage with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local/national regulations (see Section 13).

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin, eyes and clothing. Avoid spills and splashing during use. Do not breathe vapors or spray mist.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong bases Metals

Storage class Corrosive storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against liquid splashes
Chemical splash goggles and/or face shield

Hand protection Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Rubber
Break through time >480 minutes

	Glove thickness >=0.5 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Solution
Odor	None
Color	Light green
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	1.5	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	> 100 °C / 212 °F	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.3	@ 20 °C
Bulk density	No information available	
Relative density	1.3	@ 20°C.
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	10 mm2/s	@ 20 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Corrosive. Corrosive to Metals.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong bases. Metals.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhaled corrosive substances can lead to a toxic edema of the lungs.
Eye contact	Causes serious eye damage.
Skin contact	Causes severe skin burns.
Ingestion	Ingestion causes burns of the upper digestive and respiratory tracts.
Unknown acute toxicity	Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Aluminum sulfate hydrate	= 1930 mg/kg (Rat)	No data available	No data available
Iron sulphate	= 319 mg/kg (Rat)	= 155 mg/kg (Rat)	No data available
Sulfuric acid	= 2140 mg/kg (Rat)	No data available	85 - 103 mg/m³ (Rat) 1 h

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Skin contact. Inhalation. Eye contact.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Large amounts will affect pH and harm aquatic organisms

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Aluminum sulfate hydrate	= 37 mg/L LC50 Gambusia affinis 96 h = 100 mg/L LC50 Carassius auratus 96 h	No information available	= 136 mg/L EC50 Daphnia magna 15 min
Iron sulphate	= 0.56 mg/L LC50 Cyprinus carpio 96 h = 925 mg/L LC50 Poecilia reticulata 96 h	No information available	6.15 - 9.26 mg/L EC50 Daphnia magna 48 h = 152 mg/L EC50 Daphnia magna 48 h
Sulfuric acid	> 500 mg/L LC50 Brachydanio rerio 96 h	No information available	= 29 mg/L EC50 Daphnia magna 24 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG)	UN 3264
UN No. (IMDG/ANTAQ)	UN 3264
UN No. (ICAO/ANAC)	UN 3264

14.2. UN proper shipping name

CORROSIVE LIQUID, ACIDIC, INORGANIC, N.O.S. (contains sulfuric acid),

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	8
IMDG/ANTAQ Hazard class	8
ICAO/ANAC Hazard class/division	8

14.4 Packing group

ADR/RID/ADN/ADG Packing group	III
IMDG/ANTAQ Packing group	III
ICAO/ANAC Packing group	III

14.5 Environmental hazard

No

14.6 Special precautions

Hazard identification no (ADR)	80
EmS (IMDG)	F-A, S-B
Emergency Action Code (EAC)	2X
Tunnel restriction code	(E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Suspended dust may present a dust explosion hazard

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the

length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. If spilled, take caution, as material can cause surfaces to become very slippery. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Take precautionary measures against static discharges. Avoid dust formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Protect from moisture Avoid contact with: Strong oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard

present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	Odorless
Color	Black
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	140-205 °C / 284-401 °F	
Boiling point/range	No information available	
Flash point	315 °C / 590 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	

Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.04 - 1.06	@ 25 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	500 °C / 932 °F	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from open flames, hot surfaces and sources of ignition. Take precautionary measures against static charges. Protect from moisture. Avoid dust formation.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	None known.
Routes of entry	No route of entry noted.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Product is biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
Insoluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Calcium carbonate

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Product dust may be irritating to eyes, skin and respiratory system

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Calcium carbonate	207-439-9	471-34-1	60-100
Crystalline silica (impurity)	238-878-4	14808-60-7	<1

3.2 Mixtures

Not applicable

Comments
Naturally occuring mineral.

This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn.

Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required. Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against powders and dusts
Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Repeated or prolonged contact
Use protective gloves made of: Nitrile Neoprene
Frequent change is advisable

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Protect from moisture.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Calcium carbonate	= 6450 mg/kg (Rat)	No data available	No data available
Crystalline silica (impurity)	= 500 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Target organ effects Respiratory system. Lungs.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Calcium carbonate	No information available	No information available	No information available
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

Chemical Name	Persistence and degradability
Calcium carbonate	Not Applicable - Inorganic chemical.
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

Chemical Name	Bioaccumulation
Calcium carbonate	Product/Substance is inorganic
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
Insoluble in water. See component information below.

Chemical Name	Mobility
Calcium carbonate	Insoluble in water
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Calcium carbonate	Not expected to adsorb on soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required.
Group number	Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Serious eye damage/eye irritation	Category 2

Environmental hazards

Chronic aquatic toxicity	Category 3

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H319 - Causes serious eye irritation
H412 - Harmful to aquatic life with long lasting effects

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P273 - Avoid release to the environment
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating gases and vapors

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	272-712-1	68909-77-3	30-60

Comments
Based on test data – Skin corrosion/irritation (OECD 404 Skin Rabbit), this product is not corrosive or irritant.
Based on test data – Serious eye damage/irritation (EPA OPPTS: 870.2400 Eye Rabbit), this product is irritant.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid frost. Store at room temperature Avoid contact with: Acids Nitrites
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	Contains no substances with occupational exposure limit values No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Local exhaust ventilation

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Impervious gloves made of: Neoprene PVC Nitrile
Break through time >480 minutes
Glove thickness 0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing and gloves, including the inside, before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Slight
Color	Dark amber
Odor threshold	Not applicable

Property	Values	Remarks
pH	~ 11.5	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	> 100 °C / > 212 °F	
Flash point	151.6 °C / 305 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.10	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	4 cP	@ 25 °C
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	-12°C (<11°F)
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Store at room temperature. Avoid frost.

10.5 Incompatible materials

Acids. Do not add nitrites or other nitrosating agents to this product. May cause formation of nitrosamine.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	5000 mg/kg (Rat)	>2000 mg/kg (Rat)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Eye contact.

Routes of entry None known.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Not classified.

Repeated exposure

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Harmful to aquatic life with long lasting effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Ethanol, 2,2'-oxybis-, reaction products with ammonia, morpholine derivs. residues	OECD; Acute LC50; 96 hours Semi-static; Fish > 45 g/l	OECD; Acute ErC50 (growth rate); 72 hours Static; Algae; 45 mg/kg OECD 201 Algae, Growth Inhibitor Test; Chronic NOECr; 72 hours Static; Algae; 3.2 mg/l	OECD; Acute EC50; 48 hours Static, Daphnia; > 100 g/l

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

No bioaccumulation expected due to high molecular weight.

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR003599
Group number	Not required

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Does not comply
New Zealand (NZIoC)	Complies

Signal word
WARNING

Hazard Statements
H319 - Causes serious eye irritation
H401 - Toxic to aquatic life

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P273 - Avoid release to the environment
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P391 - Collect spillage

Contains
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	280-518-3	83682-78-4	5-<10

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established. No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**

Chemical Name	**Thailand**	**Vietnam**	**Turkey**
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Characteristic
Color	Clear
Odor threshold	Not applicable

Property	Values	Remarks
pH	6.5	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	> 93 °C / > 200 °F	
Flash point	> 93 °C / > 200 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.01	@ 16 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	Not applicable

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	> 2000 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Eye contact.
Routes of entry	Eye contact.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Toxic to aquatic life

Toxicity to algae
EC50 1.9mg/l Skeletonema costatum (72h) - SLB Product level Data.

Toxicity to fish
LC50 > 4mg/l Scophthalmus maximus (96h) - SLB Product level Data.

Toxicity to daphnia and other aquatic invertebrates
LC50 31.5 mg/l Acartia tonsa (48h) - SLB Product level Data.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
1-Propanaminium, 3,3',3''-[phosphinylidynetris(oxy)]tris[N-(3-aminopropyl)-2-hydroxy-N,Ndimethyl-, N,N',N''-tri-C6-18 acyl derivs, trichlorides	LC50 1-10mg/l 96h	EC50 0.19 mg/l 72h	EC50 1-10mg/l 48h

12.2 Persistence and degradability

This product is expected to be readily biodegradable.

12.3 Bioaccumulative potential

Bioaccumulation is unlikely.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

This SDS is not for use in the European Union (EU).

16. Other Information

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Suspended dust may present a dust explosion hazard

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Material becomes slippery when wet. Use caution if wet.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Take precautionary measures against static discharges. After cleaning,

flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Take precautionary measures against static discharges.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Avoid contact with: Strong oxidizing agents Strong bases Metals
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Repeated or prolonged contact Use protective gloves made of: Nitrile Butyl Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European

	Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Crystalline
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	5.5 - 8.0	@ 10%
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.65	20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available

Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Avoid heat, flames and other sources of ignition. Take precautionary measures against static charges.

10.5 Incompatible materials

Metals. Strong bases. Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	None known.
Routes of entry	No route of entry noted.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required
Group number	Not required

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Inhalation (Vapors)	Category 2
Serious eye damage/eye irritation	Category 2
Skin sensitization	Category 1
Specific target organ toxicity - Repeated exposure	Category 1

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
DANGER

Hazard Statements
H302 - Harmful if swallowed
H317 - May cause an allergic skin reaction
H319 - Causes serious eye irritation
H330 - Fatal if inhaled
H372 - Causes damage to organs through prolonged or repeated exposure

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P301 + P310 - IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P310 - Immediately call a POISON CENTER or doctor/physician
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P272 - Contaminated work clothing should not be allowed out of the workplace
P280 - Wear protective gloves/protective clothing and eye/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P314 - Get medical advice/attention if you feel unwell
P330 - Rinse mouth
P333 + P313 - If skin irritation or rash occurs: Get medical advice/attention
P337 + P313 - If eye irritation persists: Get medical advice/attention
P362 + P364 - Take off contaminated clothing and wash it before reuse
P391 - Collect spillage

Contains
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine

2-aminoethanol (Impurity)

Formaldehyde (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

H330 classification is applied due to Inhalation Acute Toxicity studies carried out in Aerosol form
Prevent the formation of aerosols.

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	225-208-0	4719-04-4	30-60
2-aminoethanol (Impurity)	205-483-3	141-43-5	<2
Formaldehyde (impurity)	200-001-8	50-00-0	<1

Comments
The product contains other ingredients which do not contribute to the overall classification.
Formaldehyde is not present as a substance. It is formed during decomposition.

Note B: Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and, therefore, these solutions require different classification and labelling since the hazards vary at different concentrations.
Note D: Certain substances which are susceptible to spontaneous polymerisation or decomposition are generallyplaced on the market in a stabilised form. It is in this form that they are listed in Part 3.

4. First Aid Measures

4.1 First aid measures

Inhalation — Call a physician or poison control center immediately. Move the exposed person to fresh air at once. Keep at rest. If breathing is difficult, (trained personnel should) give oxygen.

Ingestion — Rinse mouth. Never give anything by mouth to an unconscious person. Do not induce vomiting without medical advice. Seek medical attention at once.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention at once.

Eye Contact — Remove contact lenses, if worn. Immediately flush eyes with water for 15 minutes while holding eyelids open. Seek medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons
Do not use halon type extinguisher.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Formaldehyde.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Do not get on skin or clothing. Wash thoroughly after handling. Do not breathe vapors or spray mist. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Contain and collect spillage with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local/national regulations (see Section 13).

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Do not breathe vapors or spray mist. Avoid contact with skin and eyes. Avoid spills and splashing during use. Persons susceptible to allergic reactions should not handle this product. Prevent the formation of vapors, mists and aerosols.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Avoid frost. Avoid contact with: Strong acids Strong oxidizing agents

Storage class Toxic storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Formaldehyde is not present as a substance. It is formed during decomposition.
No biological limit allocated

Component Information

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Local exhaust ventilation When working in confined spaces (tanks, containers, etc.), ensure that there is a supply of air suitable for breathing and wear the recommended equipment

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes
Chemical splash goggles and/or face shield

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Impervious gloves made of: Nitrile Neoprene Butyl Rubber
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
Use respirator with organic vapor protection (A, brown) If there are conditions in which this triazine containing product produces a vapor, a chemical respirator with A1 + Formaldehyde and P3 particulate pre-filter combination would be required.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Clear
Odor	Amine
Color	Colorless - Pale yellow
Odor threshold	Not applicable

Property	Values	Remarks
pH	10.0 - 11.5	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	67 °C / 152.6 °F	ASTM D 93-11
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	Not applicable	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	< -20°C / -4°F
Molecular weight	No information available
VOC content(%)	None
Density	1.05 - 1.15 g/ml @ 20°C

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Contact with strong acids develops formaldehyde.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Avoid frost.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product may contain or release trace amounts of formaldehyde. The International Agency for Research on Cancer (IARC) has classified formaldehyde as a Group 1carcinogen (limited evidence in humans, sufficient evidence in animals). Exposure to formaldehyde has been linked to adverse reproductive effects in some human and animal studies. In other reproductive studies, however, no adverse effects were noted. (Meditext). Formaldehyde may also cause skin sensitisation (allergic reaction).

Inhalation Fatal if inhaled. Causes damage to organs through prolonged or repeated exposure.

Eye contact Causes serious eye irritation.

Skin contact Causes skin irritation. May cause an allergic skin reaction.

Ingestion Harmful if swallowed. May cause additional affects as listed under "Inhalation".

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	1000 mg/kg (Rat) (BASF AG, 1997)	> 4000 mg/kg (Rat) (BASF AG,1997)	0.371 mg/L (Aerosol) (Rat) (Triazine Taskforce, 2011)
2-aminoethanol (Impurity)	= 1720 mg/kg (Rat)	= 1000 mg/kg (Rabbit) = 1 mL/kg (Rabbit)	No data available
Formaldehyde (impurity)	= 100 mg/kg (Rat)	= 270 mg/kg (Rabbit)	= 0.578 mg/L (Rat) 4 h

Sensitization	May cause allergic skin reaction.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	Formaldehyde is listed by IARC in Group 1 as carcinogenic to humans.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Inhalation (Aerosol). Skin contact. Eye contact. Ingestion.
Routes of entry	Inhalation. Skin contact. Ingestion. Eye contact.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Category 1.
Target organ effects	Respiratory system.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	> 168 mg/l LC50 96h Sheepshead Minnow (SLB data)	1.624 mg/l EC50 72h Skeletonema (SLB data)	99.68 mg/l KC50 48h Acartia (SLB data)
2-aminoethanol (Impurity)	114 - 196 mg/L LC50 Oncorhynchus mykiss 96 h = 227 mg/L LC50 Pimephales promelas 96 h = 3684 mg/L LC50 Brachydanio rerio 96 h 300 - 1000 mg/L LC50 Lepomis macrochirus 96 h > 200 mg/L LC50 Oncorhynchus mykiss 96 h	= 15 mg/L EC50 Desmodesmus subspicatus 72 h	= 65 mg/L EC50 Daphnia magna 48 h
Formaldehyde (impurity)	22.6 - 25.7 mg/L LC50 Pimephales promelas 96 h = 1510 µg/L LC50 Lepomis macrochirus 96 h = 41 mg/L LC50 Brachydanio rerio 96 h	No information available	11.3 - 18 mg/L EC50 Daphnia magna 48 h = 2 mg/L LC50 Daphnia magna 48 h

	0.032 - 0.226 mL/L LC50 Oncorhynchus mykiss 96 h 100 - 136 mg/L LC50 Oncorhynchus mykiss 96 h 23.2 - 29.7 mg/L LC50 Pimephales promelas 96 h		

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Readily biodegradable
2-aminoethanol (Impurity)	Readily biodegradable
Formaldehyde (impurity)	Rapidly biodegradable

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Not likely to bioaccumulate log Kow <=3
2-aminoethanol (Impurity)	Product does not bioaccumulate due to reaction with water
Formaldehyde (impurity)	Does not bioaccumulate log Pow =0.35

12.4 Mobility

Mobility
See component information below.

Chemical Name	Mobility
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Soluble in water
Formaldehyde (impurity)	Miscible in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Study does not need to be conducted because the substance is readily biodegradable
2-aminoethanol (Impurity)	Study does not need to be conducted because the substance is readily biodegradable
Formaldehyde (impurity)	Henry's Law Constant 0.034 (in Pa m³/mol) @ 25 °C

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG)	UN2810
UN No. (IMDG/ANTAQ)	UN2810
UN No. (ICAO/ANAC)	UN2810

14.2. UN proper shipping name
TOXIC LIQUID, ORGANIC, N.O.S. (Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine)

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	6.1
IMDG/ANTAQ Hazard class	6.1
ICAO/ANAC Hazard class/division	6.1

14.4 Packing group

ADR/RID/ADN/ADG Packing group	II
IMDG/ANTAQ Packing group	II
ICAO/ANAC Packing group	II

14.5 Environmental hazard
No

14.6 Special precautions

Hazard identification no (ADR)	60
EmS (IMDG)	F-A, S-A
Emergency Action Code (EAC)	2X
Tunnel restriction code	(D/E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

2-aminoethanol (Impurity)
Schedule 4
Schedule 6
Schedule 5
Formaldehyde (impurity)
Schedule 6

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR005127
Group number	6.1D, 6.1E, 6.5B, 6.4A, 6.9A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Inhalation (Vapors)	Category 3
Serious eye damage/eye irritation	Category 2
Skin sensitization	Category 1
Specific target organ toxicity - Repeated exposure	Category 1

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
DANGER

Hazard Statements
H302 - Harmful if swallowed
H317 - May cause an allergic skin reaction
H319 - Causes serious eye irritation
H331 - Toxic if inhaled
H372 - Causes damage to organs through prolonged or repeated exposure

Precautionary statements
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P330 - Rinse mouth
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P271 - Use only outdoors or in a well-ventilated area
P272 - Contaminated work clothing should not be allowed out of the workplace
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P311 - Call a POISON CENTER or doctor/physician
P314 - Get medical advice/attention if you feel unwell
P333 + P313 - If skin irritation or rash occurs: Get medical advice/attention
P337 + P313 - If eye irritation persists: Get medical advice/attention
P362 + P364 - Take off contaminated clothing and wash it before reuse
P403 + P233 - Store in a well-ventilated place. Keep container tightly closed

Contains
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine

Water

Formaldehyde (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating and toxic gases and vapors

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	225-208-0	4719-04-4	30-60
Water	231-791-2	7732-18-5	30-60
Formaldehyde (impurity)	200-001-8	50-00-0	0-0.1

Comments
Based on test data - (ATE inhalation: 0.7232 mg/l) H330 does not apply.

Formaldehyde is not present as a substance. It is formed during decomposition. Formaldehyde is listed by IARC in Group 1 as carcinogenic to humans

Note B: Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and, therefore, these solutions require different classification and labelling since the hazards vary at different concentrations.
Note D: Certain substances which are susceptible to spontaneous polymerisation or decomposition are generallyplaced on the market in a stabilised form. It is in this form that they are listed in Part 3.

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. If not breathing, give artificial respiration. Seek medical attention at once.

Ingestion Do NOT induce vomiting. Get immediate medical attention. Rinse mouth. Never give anything by mouth to an unconscious person.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Formaldehyde.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. Persons susceptible to allergic reactions should not handle this product.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents Acids Keep at -5 - 40°C

Storage class Toxic storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Formaldehyde is not present as a substance. It is formed during decomposition. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes
Chemical splash goggles and/or face shield

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) If there are conditions in which this triazine containing product produces a vapor, a chemical respirator with A1 + Formaldehyde and P2 particulate pre-filter combination would be required. At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	1.065 - 1.135	@ 16°C.
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	<10 cSt	@ 40 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep at temperatures above -5 and < 40°C.

10.5 Incompatible materials

Strong oxidizing agents. Acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product may contain or release trace amounts of formaldehyde. The International Agency for Research on Cancer (IARC) has classified formaldehyde as a Group 1carcinogen (limited evidence in humans, sufficient evidence in animals). Exposure to formaldehyde has been linked to adverse reproductive effects in some human and animal studies. In other reproductive studies, however, no adverse effects were noted. (Meditext). Formaldehyde may also cause skin sensitisation (allergic reaction).

Inhalation Toxic if inhaled. Causes damage to organs through prolonged or repeated exposure.

Eye contact Causes serious eye irritation.

Skin contact May cause an allergic skin reaction.

Ingestion Harmful if swallowed. May cause additional affects as listed under "Inhalation".

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	1000 mg/kg (Rat) (BASF AG, 1997)	> 4000 mg/kg (Rat) (BASF AG,1997)	0.371 mg/L (Aerosol) (Rat) (Triazine Taskforce, 2011)
Water	> 90 mL/kg (Rat)	No data available	No data available
Formaldehyde (impurity)	= 100 mg/kg (Rat)	= 270 mg/kg (Rabbit)	= 0.578 mg/L (Rat) 4 h

Sensitization May cause sensitization by skin contact.

Mutagenic effects Contains an known or suspected mutagen.

Carcinogenicity Formaldehyde is listed by IARC in Group 1 as carcinogenic to humans.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation. Ingestion. Skin contact.

Routes of entry Inhalation. Skin contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Category 1.

Target organ effects Respiratory system.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	> 168 mg/l LC50 96h Sheepshead Minnow (SLB data)	1.624 mg/l EC50 72h Skeletonema (SLB data)	99.68 mg/l KC50 48h Acartia (SLB data)

Formaldehyde (impurity)	22.6 - 25.7 mg/L LC50 Pimephales promelas 96 h = 1510 µg/L LC50 Lepomis macrochirus 96 h = 41 mg/L LC50 Brachydanio rerio 96 h 0.032 - 0.226 mL/L LC50 Oncorhynchus mykiss 96 h 100 - 136 mg/L LC50 Oncorhynchus mykiss 96 h 23.2 - 29.7 mg/L LC50 Pimephales promelas 96 h	No information available	11.3 - 18 mg/L EC50 Daphnia magna 48 h = 2 mg/L LC50 Daphnia magna 48 h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Readily biodegradable
Formaldehyde (impurity)	Rapidly biodegradable

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Not likely to bioaccumulate log Kow <=3
Formaldehyde (impurity)	Does not bioaccumulate log Pow =0.35

log Pow
-1.5 - 0.2

12.4 Mobility

Mobility
See component information below.

Chemical Name	Mobility
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Soluble in water
Formaldehyde (impurity)	Miscible in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Hexahydro-1,3,5-tris(2-hydroxyethyl)-sym-triazine	Study does not need to be conducted because the substance is readily biodegradable
Formaldehyde (impurity)	Henry's Law Constant 0.034 (in Pa m³/mol) @ 25 °C

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG) UN2810
UN No. (IMDG/ANTAQ) UN2810
UN No. (ICAO/ANAC) UN2810

14.2. UN proper shipping name

TOXIC LIQUID, ORGANIC, N.O.S. (2, 2', 2''-(hexahydro-1, 3, 5-triazine -1, 3, 5-triyl) triethanol)

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	6.1
IMDG/ANTAQ Hazard class	6.1
ICAO/ANAC Hazard class/division	6.1

14.4 Packing group

ADR/RID/ADN/ADG Packing group	II
IMDG/ANTAQ Packing group	II
ICAO/ANAC Packing group	II

14.5 Environmental hazard

No

14.6 Special precautions

Hazard identification no (ADR)	60
EmS (IMDG)	F-A, S-A
Emergency Action Code (EAC)	2X
Tunnel restriction code	(D/E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Formaldehyde (impurity)
Schedule 6

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Inhalation (Dusts/Mists)	Category 3
Skin corrosion/irritation	Category 2
Serious eye damage/eye irritation	Category 1
Skin sensitization	Category 1
Specific target organ toxicity - Single exposure	Category 2

Specific target organ toxicity - Repeated exposure	Category 1

Environmental hazards Not classified

Physical Hazards

Flammable Liquids	Category 3

2.2 Label elements

Signal word
DANGER

Hazard Statements
H302 - Harmful if swallowed
H315 - Causes skin irritation
H317 - May cause an allergic skin reaction
H318 - Causes serious eye damage
H331 - Toxic if inhaled
H371 - May cause damage to organs
H372 - Causes damage to organs through prolonged or repeated exposure
H226 - Flammable liquid and vapor

Precautionary statements
P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician

Supplementary precautionary statements
P240 - Ground/bond container and receiving equipment
P241 - Use explosion-proof electrical/ ventilating/ lighting/ equipment
P242 - Use only non-sparking tools
P243 - Take precautionary measures against static discharge
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P271 - Use only outdoors or in a well-ventilated area
P272 - Contaminated work clothing should not be allowed out of the workplace
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P308 + P311 - IF exposed or concerned: Call a POISON CENTER or doctor
P314 - Get medical advice/attention if you feel unwell
P330 - Rinse mouth
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P333 + P313 - If skin irritation or rash occurs: Get medical advice/attention
P362 + P364 - Take off contaminated clothing and wash it before reuse
P370 + P378 - In case of fire: Use dry sand, dry chemical or alcohol-resistant foam to extinguish
P403 + P233 - Store in a well-ventilated place. Keep container tightly closed

P403 + P235 - Store in a well-ventilated place. Keep cool
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol

Methanol

2-aminoethanol

Formaldehyde (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	225-208-0	4719-04-4	30-60
Methanol	200-659-6	67-56-1	5-10
2-aminoethanol	205-483-3	141-43-5	1-5
Formaldehyde (impurity)	200-001-8	50-00-0	<1

Comments
Formaldehyde is not present as a substance. It is formed during decomposition.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. Seek medical attention at once.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention at once.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Seek immediate medical attention/advice.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to

hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
P370 + P378 - In case of fire: Use dry sand, dry chemical or alcohol-resistant foam to extinguish.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire, Do not use halon type extinguisher.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
FLAMMABLE. Vapors are heavier than air and may spread along floors. Vapors may travel considerable distance to source of ignition and flash back.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Formaldehyde.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG •3W

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Dike to collect large liquid spills. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Take precautionary measures against static discharges. Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. Ground and bond containers when transferring material. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Prevent the formation of vapors, mists and aerosols. Avoid spills and splashing during use. Avoid contact with skin, eyes and clothing. Avoid breathing vapors or mists. Persons susceptible to allergic reactions should not handle this product.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Take precautionary measures against static discharges. Use spark-proof tools and explosion-proof equipment. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Oxidizing agents

Storage class Flammable liquid storage. Toxic storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Formaldehyde is not present as a substance. It is formed during decomposition.

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection — Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Use protective gloves made of: Nitrile Neoprene Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection — Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) If there are conditions in which this triazine containing product produces a vapor, a chemical respirator with A1 + Formaldehyde and P2 particulate pre-filter combination would be required. At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Amine
Color	Pale yellow - Straw
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	10 - 11.5	(5% IPA/H20)
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	52 °C / 125.6 °F	Closed cup
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	63.7 mmHg	@ 37.8 °C
Vapor density	>1	(Air = 1.0)
Specific gravity	1.074	@ 16 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	14-16 cPs	
log Pow	Not determined	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	-37°C (-34.6°F)
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

FLAMMABLE LIQUID AND VAPOR. Contact with strong acids develops formaldehyde.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Take precautionary measures against static charges. Keep away from open flames, hot surfaces and sources of ignition.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product may contain or release trace amounts of formaldehyde. The International Agency for Research on Cancer (IARC) has classified formaldehyde as a Group 1carcinogen (limited evidence in humans, sufficient evidence in animals). Exposure to formaldehyde has been linked to adverse reproductive effects in some human and animal studies. In other reproductive studies, however, no adverse effects were noted. (Meditext). Formaldehyde may also cause skin sensitisation (allergic reaction).

Inhalation Toxic if inhaled. Causes damage to organs through prolonged or repeated exposure.

Eye contact Causes serious eye damage.

Skin contact Causes skin irritation. May cause an allergic skin reaction. Components of the product may be absorbed into the body through the skin.

Ingestion Harmful if swallowed.

Unknown acute toxicity Not applicable.

2-aminoethanol	= 1720 mg/kg (Rat)	= 1000 mg/kg (Rabbit) = 1 mL/kg (Rabbit)	> 1.3 mg/l Vapour 6h (Rat)
Formaldehyde (impurity)	= 100 mg/kg (Rat)	= 270 mg/kg (Rabbit)	= 0.578 mg/L (Rat) 4 h

Sensitization May cause sensitization by skin contact.

Mutagenic effects This substance has no evidence of mutagenic properties.

Carcinogenicity Formaldehyde is listed by IARC in Group 1 as carcinogenic to humans.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Ingestion. Skin contact. Eye contact.

Routes of entry Inhalation. Ingestion. Skin absorption.

Specific target organ toxicity - Single exposure Category 2

Specific target organ toxicity - Repeated exposure Category 1.

Target organ effects Respiratory system.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	> 168 mg/l LC50 96h Sheepshead Minnow (SLB data)	1.624 mg/l EC50 72h Skeletonema (SLB data)	99.68 mg/l KC50 48h Acartia (SLB data)

12.2 Persistence and degradability

Readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	Readily biodegradable
2-aminoethanol	Readily biodegradable
Formaldehyde (impurity)	Rapidly biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	Not likely to bioaccumulate log Kow <=3
2-aminoethanol	Does not bioaccumulate log Kow -1.91
Formaldehyde (impurity)	Does not bioaccumulate log Pow =0.35

log Pow
-1.5 - 0.2

12.4 Mobility

Mobility
Soluble in water. See component information below.

Chemical Name	Mobility
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	Soluble in water
Formaldehyde (impurity)	Miscible in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
2,2',2''-(Hexahydro-1,3,5-triazin-1,3,5-triyl)triethanol	Study does not need to be conducted because the substance is readily biodegradable
Formaldehyde (impurity)	Henry's Law Constant 0.034 (in Pa m^3/mol) @ 25 °C

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Do not burn, or use a cutting torch on, the empty drum. Empty containers may contain flammable or explosive vapors. Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

.

.

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG)	UN2929
UN No. (IMDG/ANTAQ)	UN2929
UN No. (ICAO/ANAC)	UN2929

14.2. UN proper shipping name

Toxic liquids, flammable, organic, n.o.s., (2, 2',2"-(hexahydro-1,3,5-triazine-1,3,5-triyl)triethanol, methyl alcohol),

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	6.1 (3)
IMDG/ANTAQ Hazard class	6.1 (3)
ICAO/ANAC Hazard class/division	6.1 (3)

14.4 Packing group

ADR/RID/ADN/ADG Packing group	PG II
IMDG/ANTAQ Packing group	PG II
ICAO/ANAC Packing group	PG II

14.5 Environmental hazard

No

14.6 Special precautions

Hazard identification no (ADR)	63
EmS (IMDG)	F-E, S-D
Emergency Action Code (EAC)	•3W
Tunnel restriction code	(D/E)
Hazchem code ADG	•3W

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Methanol
Schedule 6
Schedule 5
2-aminoethanol
Schedule 4
Schedule 6
Schedule 5
Formaldehyde (impurity)
Schedule 6

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Serious eye damage/eye irritation	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Water

Ammonium hydrogensulfite

Sulphur Dioxide (Impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Water	231-791-2	7732-18-5	30-60
Ammonium hydrogensulfite	233-469-7	10192-30-0	30-60
Sulphur Dioxide (Impurity)	231-195-2	7446-09-5	<1

Comments
Sulfur dioxide is not present as a substance. It is formed during decomposition.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.
Skin contact	Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.
Eye Contact	Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Heating or fire can release toxic gas Sulphur oxides, Nitrogen oxides (NOx), Oxides of:, Ammonia, Amines.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures

Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
This product slowly releases sulphur dioxide in contact with air. Use only in well-ventilated areas. In case of insufficient ventilation, wear suitable respiratory equipment. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands before eating, drinking or smoking Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents Acids Alkalis Keep at 5-30°C
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	Exposure limit noted is for decomposition product Sulfur dioxide. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Respirator with combination filter for vapour/particulate (EN 141) Chemical respirator with ammonia and amines cartridge (K/P2, green filter). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing

before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Pungent Sulfur
Color	Straw - Yellow
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	4.9 - 5-5	1% solution
Melting / freezing point	No information available	
Boiling point/range	105 °C / 221 °F	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	18 mmHg	@ 20 °C
Vapor density	<1	(Air = 1.0)
Specific gravity	1.3	
Bulk density	No information available	
Relative density	1.27 - 1.39	@ 20°C.
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Reacts violently with oxidizers. Liberates poisonous sulfur dioxide gas on contact with acid.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Keep at temperatures between 5-30°C.

10.5 Incompatible materials

Strong oxidizing agents. Acids. Alkalis.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information Bisulfites may cause skin sensitization in sulfite sensitive persons. Bisulfites may also cause respiratory sensitization in asthmatics and sulfite sensitive persons.

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Water	> 90 mL/kg (Rat)	No data available	No data available
Ammonium hydrogensulfite	LD50= 2746 mg/kg - source: By analogy to product with similar composition. Notes: Related to male LD50> 2150 mg/kg By analogy to product with similar composition.	LD50> 2000 mg/kg - Duration: 24h. Source: By analogy to product with similar composition	LC50 > 5.5 mg/l - Duration: 4h. Source: By analogy to product with similar composition.

	Notes: Related to female		
Sulphur Dioxide (Impurity)	No data available	No data available	= 2500 ppm (Rat) 1 h

Sensitization Repeated or prolonged contact may cause allergic reactions in very susceptible persons.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Eye contact. Inhalation.

Routes of entry Eye contact. Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Water	No information available	No information available	No information available
Ammonium hydrogensulfite	OECD 203 Fish LC50 > 464 mg/l - Duration h: 96 - Notes: By analogy to product with similar composition	Algae EC50 = 43.8 mg/l - Duration h: 72 - Notes: By analogy to product with similar composition.	Daphnia magna EC50 = 89 mg/l - Duration h: 48 - Notes: By analogy to product with similar composition
Sulphur Dioxide (Impurity)	No information available	No information available	No information available

12.2 Persistence and degradability

Not Applicable - Inorganic chemical. See component information below.

Chemical Name	Persistence and degradability

Ammonium hydrogensulfite	Not applicable

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical. See component information below.

Chemical Name	Bioaccumulation
Ammonium hydrogensulfite	No data available

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Ammonium hydrogensulfite	No data available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR002503
Group number	6.4A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies

Japan (ENCS)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Aspiration toxicity	Category 1
Skin corrosion/irritation	Category 2
Skin sensitization	Category 1

Environmental hazards

Chronic aquatic toxicity	Category 3

Physical Hazards Not classified

2.2 Label elements

Signal word
DANGER

Hazard Statements
H304 - May be fatal if swallowed and enters airways
H315 - Causes skin irritation
H317 - May cause an allergic skin reaction
H412 - Harmful to aquatic life with long lasting effects

Precautionary statements
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P301 + P310 - IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P331 - Do NOT induce vomiting
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P272 - Contaminated work clothing should not be allowed out of the workplace
P273 - Avoid release to the environment
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P333 + P313 - If skin irritation or rash occurs: Get medical advice/attention
P362 + P364 - Take off contaminated clothing and wash it before reuse

Contains
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*

Orange, sweet, extract

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Vapors may form explosive mixtures with air

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	926-141-6	RM1004884	60-100
Orange, sweet, extract	232-433-8	8028-48-6	10-30

Comments
Terpenes and Terpenoids, sweet orange oil can also use CAS 68647-72-3.

*Substances which have an EC Number that begins with the number "9" is a Provisional List Number. The list numbers published by ECHA do not have any legal significance. The EC substance definition and related classification & labelling has been developed in the framework of the Regulation (EC) No 1907/2006 (REACH). For information about the related CAS number see section 15 of this SDS.

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing has stopped, begin artificial respiration. Seek medical attention at once.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. If vomiting occurs spontaneously, minimize the risk of aspiration by properly positioning the affected person. Never give anything by mouth to an unconscious person. Seek medical attention.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons

Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Vapors may form explosive mixture with air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. Persons susceptible to allergic reactions should not handle this product.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Avoid contact with: Strong oxidizing agents Strong acids

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Oil mist (mineral) workplace exposure limits are currently under review by legislative authorities. This workplace exposure limit (WEL) standard is applicable to highly refined mineral oils and is provided as a guidance limit only LT. EXP = 5mg/m^3 and ST. EXP = 10mg/m^3.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Not determined	Not determined	Not determined
Orange, sweet, extract	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Not determined	Not determined	Not determined
Orange, sweet, extract	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene

	Break through time >480 minutes Glove thickness >=0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of inadequate ventilation wear respiratory protection Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Sweet
Color	Colorless
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	< -20 °C / -4 °F	
Boiling point/range	173 °C / 343.4 °F	
Flash point	65 °C / 149 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	5	
Lower flammability limit	0.7	
Vapor pressure	~2 mmHg	@ 20 °C
Vapor density	No information available	
Specific gravity	0.81	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	Soluble organic solvents	
Autoignition temperature	230 °C / 446 °F	
Decomposition temperature	No information available	
Kinematic viscosity	<20.5 mm2/s	@ 40 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Vapours may form explosive mixtures with air
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Vapours may form explosive mixtures with air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Not known.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system. May cause additional affects as listed under "Ingestion".
Eye contact	May cause irritation.
Skin contact	Causes skin irritation. May cause an allergic skin reaction. Repeated exposure may cause skin dryness or cracking.
Ingestion	May be fatal if swallowed and enters airways. Potential for aspiration if swallowed. Aspiration may cause pulmonary edema and pneumonitis.
Unknown acute toxicity	Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	>5000 mg/kg (Rat)	No data available	>5000 mg/m³ (Rat, 8h) >5000 mg/kg (Rabbit)
Orange, sweet, extract	No data available	No data available	No data available

Sensitization May cause allergic skin reaction.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Ingestion. Skin contact. Inhalation.

Routes of entry Inhalation. Skin contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard May be fatal if swallowed and enters airways.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Harmful to aquatic life with long lasting effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	No information available	1000 mg/l (Oncorhynchus mykiss, 96h	1000 mg/l (Daphnia magna), 48h
Orange, sweet, extract	> 1000 mg/l (Scophthalmus Maximus), 96h	No information available	451 mg/l (Acartia Tonsa), 48h

12.2 Persistence and degradability

Product is biodegradable. See component information below.

Chemical Name	Persistence and degradability

Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Readily biodegradable

12.3 Bioaccumulative potential

The product does not contain any substances expected to be bioaccumulating. See component information below.

Chemical Name	Bioaccumulation
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Does not bioaccumulate

12.4 Mobility

Mobility
Insoluble in water. See component information below.

Chemical Name	Mobility
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR002649
Group number	6.1E, 6.3A, 6.5B, 9.1D

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code
Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

CAS Number 64742-47-8 can be used to identify the substance given a list number in section 3 in areas not subject to the REACH regulation.

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	10-Jun-2015
Revision date	13-Sep-2019

P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Alcohols, C6-12, ethoxylated

Ethoxylated monoethanolamide of fatty acids of coconut oil

2-butoxyethanol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Alcohols, C6-12, ethoxylated	Polymer	68439-45-2	5-10
Ethoxylated monoethanolamide of fatty acids of coconut oil	612-392-6	61791-08-0	5-10
2-butoxyethanol	203-905-0	111-76-2	1-5

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if symptoms occur.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands before eating, drinking or smoking Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Store above freezing temperature Avoid contact with: Strong acids Strong bases Strong oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in

Skin and body protection	confined or poorly ventilated spaces, respiratory protection with air supply must be used. Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

log Pow	<2	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available

VOC content(%) None
Density No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Store above freezing temperature.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids. Strong bases.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye damage.

Skin contact Prolonged contact may cause redness and irritation. May be absorbed through the skin in harmful amounts.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Alcohols, C6-12, ethoxylated	1200 mg/kg - Litterature data (rat)	2000 mg/kg (rat)(based on components)	No data available
Ethoxylated monoethanolamide of fatty acids of coconut oil	> 2000 mg/kg (Rat)	No data available	No data available
2-butoxyethanol	1200 mg/kg (Guinea pigs)	> 2000 mg/kg (Rat)	400 ppm (Rabbit)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Eye contact. Skin contact.
Routes of entry	Skin absorption.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Alcohols, C6-12, ethoxylated	No information available	No information available	No information available
Ethoxylated monoethanolamide of fatty acids of coconut oil	No information available	No information available	No information available
2-butoxyethanol	= 2950 mg/L LC50 Lepomis macrochirus 96 h = 1490 mg/L LC50 Lepomis macrochirus 96 h	No information available	= 1698 - 1940 mg/L (LC50; Daphnia magna) = 1720 mg/L (EC50; water flea)

12.2 Persistence and degradability

Product is biodegradable. See component information below.

Chemical Name	Persistence and degradability
2-butoxyethanol	Readily biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
2-butoxyethanol	Not likely to bioaccumulate

log Pow
<2

12.4 Mobility

Mobility
Soluble in water. See component information below.

Chemical Name	Mobility
2-butoxyethanol	Soluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
2-butoxyethanol	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

2-butoxyethanol
Schedule 6

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Acute toxicity - Dermal	Category 4
Acute toxicity - Inhalation (Dusts/Mists)	Category 4
Skin corrosion/irritation	Category 2
Serious eye damage/eye irritation	Category 1

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
DANGER

Hazard Statements
H302 - Harmful if swallowed
H312 - Harmful in contact with skin
H315 - Causes skin irritation
H318 - Causes serious eye damage
H332 - Harmful if inhaled

Precautionary statements
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P261 - Avoid breathing dust/fume/gas/mist/vapors/spray
P264 - Wash face, hands and any exposed skin thoroughly after handling
P270 - Do not eat, drink or smoke when using this product
P271 - Use only outdoors or in a well-ventilated area
P310 - Immediately call a POISON CENTER or doctor/physician
P330 - Rinse mouth
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P362 + P364 - Take off contaminated clothing and wash it before reuse

Contains
2-butoxyethanol

D-Glucopyranose, oligomeric, C8-10 glycosides

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating and toxic gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Water	231-791-2	7732-18-5	30-60
2-butoxyethanol	203-905-0	111-76-2	30-60
D-Glucopyranose, oligomeric, C8-10 glycosides	500-220-1	68515-73-1	5-10

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation Move to fresh air. Keep at rest. If breathing is difficult, (trained personnel should) give oxygen. Seek immediate medical attention/advice.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention if irritation occurs.

Eye Contact Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Seek medical attention at once.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons

None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Butyl Break through time >480 minutes Glove thickness >=0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Clear
Odor	Sweet
Color	Colorless - Light orange
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	3.2	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	~ 16 mmHg	@ 20 °C
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	0.99 s.g	@ 20°C.
Water solubility	Soluble in water	

Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Not known.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Harmful by inhalation. Inhalation of vapors in high concentration may cause shortness of breath (lung edema).
Eye contact	Causes serious eye damage.
Skin contact	Causes skin irritation. Components of the product may be absorbed into the body through the skin.

Ingestion Harmful if swallowed.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
2-butoxyethanol	1200 mg/kg (Guinea pigs)	> 2000 mg/kg (Rat)	400 ppm (Rabbit)
D-Glucopyranose, oligomeric, C8-10 glycosides	> 2000 mg/kg bw (Rat) ECHA Data	> 2000 mg/kg (Rabbit) ECHA Data	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation. Eye contact. Skin contact. Ingestion.

Routes of entry Inhalation. Eye contact. Skin contact. Ingestion.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
2-butoxyethanol	= 2950 mg/L LC50 Lepomis	No information available	= 1698 - 1940 mg/L (LC50; Daphnia

	macrochirus 96 h = 1490 mg/L LC50 Lepomis macrochirus 96 h		magna) = 1720 mg/L (EC50; water flea)
D-Glucopyranose, oligomeric, C8-10 glycosides	170 mg/l LC50 Zebra fish	37 mg/L (= 21 mg a.i./L) EC50 to the freshwater algae Scenedesmus subspicatus 72h	> 100 mg/l EC50 Daphnia magna 48h

12.2 Persistence and degradability

Readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
2-butoxyethanol	Readily biodegradable
D-Glucopyranose, oligomeric, C8-10 glycosides	OECD 301 Readily biodegradable

12.3 Bioaccumulative potential

The product does not contain any substances expected to be bioaccumulating. See component information below.

Chemical Name	Bioaccumulation
2-butoxyethanol	Not likely to bioaccumulate
D-Glucopyranose, oligomeric, C8-10 glycosides	Not likely to bioaccumulate

12.4 Mobility

Mobility
Soluble in water. See component information below.

Chemical Name	Mobility
2-butoxyethanol	Soluble in water
D-Glucopyranose, oligomeric, C8-10 glycosides	Partially soluble

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
2-butoxyethanol	No information available
D-Glucopyranose, oligomeric, C8-10 glycosides	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

D-Glucopyranose, oligomeric, C8-10 glycosides

Sulfonation products of disodium sulfite with (esterification products of C10-16 (even numbered) alkyl polyglycosides with maleic anhydride)*

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
2-(2-hydroxyethoxy)ethan-1-ol	203-872-2	111-46-6	10 - < 20
D-Glucopyranose, oligomeric, C8-10 glycosides	500-220-1	68515-73-1	5 - < 15
Sulfonation products of disodium sulfite with (esterification products of C10-16 (even numbered) alkyl polyglycosides with maleic anhydride)*	940-678-3	RM1003733	5 - < 15

Comments
Based on test data - Eye Irritation (OECD 405), this product is not irritant.

*Substances which have an EC Number that begins with the number "9" is a Provisional List Number. The list numbers published by ECHA do not have any legal significance. The EC substance definition and related classification & labelling has been developed in the framework of the Regulation (EC) No 1907/2006 (REACH). For information about the related CAS number see section 15 of this SDS.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin, eyes and clothing. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Store at room temperature Avoid frost.

Storage class Chemical storage.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
D-Glucopyranose, oligomeric, C8-10 glycosides	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before breaks and immediately after handling the product

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Viscous
Odor	Slight
Color	Colorless - Pale yellow
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	Approx. 5	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	~ 100 °C / 212 °F	
Flash point	> 110 °C / > 230 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.04	20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	~ 300 cP	@ 20 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	< 0°C / 32°F
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Store at room temperature. Do not freeze.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

LD50 Oral > 2000 mg/kg (rat) Calculated (MIXTURE)

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
D-Glucopyranose, oligomeric, C8-10 glycosides	> 2000 mg/kg bw (Rat) ECHA Data	> 2000 mg/kg (Rabbit) ECHA Data	No data available
Sulfonation products of disodium sulfite with (esterification products of C10-16 (even numbered) alkyl polyglycosides with maleic anhydride)*	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
D-Glucopyranose, oligomeric, C8-10 glycosides	170 mg/l LC50 Zebra fish	37 mg/L (= 21 mg a.i./L) EC50 to the freshwater algae Scenedesmus subspicatus 72h	> 100 mg/l EC50 Daphnia magna 48h
Sulfonation products of disodium sulfite with (esterification products of C10-16 (even numbered) alkyl polyglycosides with maleic anhydride)*	No information available	No information available	No information available

12.2 Persistence and degradability

Readily biodegradable. See component information below.

Chemical Name	Persistence and degradability
D-Glucopyranose, oligomeric, C8-10 glycosides	OECD 301 Readily biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
D-Glucopyranose, oligomeric, C8-10 glycosides	Not likely to bioaccumulate

12.4 Mobility

Mobility
Soluble in water. See component information below.

Chemical Name	Mobility
D-Glucopyranose, oligomeric, C8-10 glycosides	Partially soluble

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
D-Glucopyranose, oligomeric, C8-10 glycosides	No information available

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated

ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Does not comply
Philippines (PICCS)	Does not comply
Japan (ENCS)	Does not comply
China (IECSC)	Does not comply
Australia (AICS)	Complies
Korean (KECL)	Does not comply
New Zealand (NZIoC)	Does not comply

CAS Number 151911-53-4 can be used to identify the substance given a list number in section 3 in areas not subject to the REACH regulation.

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	11-Feb-2019
Revision date	19-Mar-2019
Version	9
This SDS has been revised in the following section(s)	1, 2, 3, 8, 11, 12, 15, 16 There have been changes with regard to classification. Updated according to GHS/CLP.

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Tetradec-1-ene

2.3 Other hazards

This substance does not meet the PBT/vPvB criteria of REACH, annex XIII

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Tetradec-1-ene	214-306-9	1120-36-1	30-60

Comments
The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash contaminated clothing before re-use. Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to

hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents Strong acids

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Contains no substances with occupational exposure limit values

Component Information

Chemical Name	Arabic	Australia	Egypt
Tetradec-1-ene	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Tetradec-1-ene	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Tetradec-1-ene	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Tetradec-1-ene	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Tetradec-1-ene	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical

hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene Break through time >480 minutes Glove thickness =>0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Very viscous
Odor	Mild
Color	Tan - White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	-20 °C / -4 °F	
Boiling point/range	115.6 °C / 240.0 °F	
Flash point	> 107.2 °C / > 225.0 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	0.96	15.6 °C
Bulk density	No information available	
Relative density	No information available	

Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	> 20.5 mm2/s	@ 40 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Repeated exposure may cause skin dryness or cracking.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Tetradec-1-ene	> 10000 mg/kg (Rat)	> 10000 mg/kg (Rabbit)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Inhalation. Skin contact.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard The viscosity of this product is high enough that it is not an aspiration risk and the H304 phrase does not apply.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Tetradec-1-ene	= 0.39 mg/L LC50 Oncorhynchus mykiss 96 h = 1.06 mg/L LC50 Pimephales promelas 96 h 1 - 3.2 mg/L LC50 Brachydanio rerio 96 h	22 - 24 mg/L EC50 Pseudokirchneriella subcapitata 96 h	= 0.74 mg/L EC50 Daphnia magna 48 h = 0.68 mg/L LC50 Daphnia magna 96 h

	10.0 - 32.0 mg/L LC50 Poecilia reticulata 96 h		

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Insoluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

No poisons schedule number allocated

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)

Safety Data Sheet
SAFE-VIS* HDE

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name SAFE-VIS* HDE
Product code PID1415
Country Limitations This SDS is not for use in EU/EEA.

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Viscosifier. Completion fluid additive.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Acute toxicity - Oral	Category 4
Specific target organ toxicity - Repeated exposure	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H302 - Harmful if swallowed
H373 - May cause damage to organs through prolonged or repeated exposure

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P270 - Do not eat, drink or smoke when using this product
P301 + P312 - IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
P314 - Get medical advice/attention if you feel unwell
P330 - Rinse mouth
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling

Contains
Ethylene Glycol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Ethylene Glycol	203-473-3	107-21-1	60-100

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation

develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Seek medical attention if irritation occurs.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Environmental exposure controls
Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile Butyl
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Odorless
Color	Colorless
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	134 °C / 273 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	< 0.05	
Vapor density	No information available	
Specific gravity	0.88	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Dispersible	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization

Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system. May cause additional affects as listed under "Ingestion".

Eye contact May cause eye irritation.

Skin contact Prolonged contact may cause redness and irritation. May be absorbed through the skin in harmful amounts.

Ingestion Harmful if swallowed. May cause damage to organs through prolonged or repeated exposure.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Ethylene Glycol	= 7712 mg/kg (Rat) ECHA Data	> 3500 mg/kg (Mouse) ECHA Data	> 2.5 mg/l (Rat) 6 hour ECHA Data

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Ingestion. Skin contact.

Routes of entry Skin absorption.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Category 2.

Target organ effects Kidney.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Ethylene Glycol	40000 - 60000 mg/L LC50 (Pimephales promelas) = 96 h 40761 mg/L LC50 (Oncorhynchus mykiss) = 96 h 27540 mg/L LC50 (Lepomis macrochirus) = 96 h 14 - 18 mL/L LC50 (Oncorhynchus mykiss) = 96 h 16000 mg/L LC50 (Poecilia reticulata) = 96 h 41000 mg/L LC50 (Oncorhynchus mykiss) = 96 h	6500 - 13000 mg/L EC50 (Pseudokirchneriella subcapitata) = 96 h	46300 mg/L EC50 (Daphnia magna) = 48 h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Ethylene Glycol	Readily biodegradable

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Ethylene Glycol	log Pow -1.36(Calculated) Not likely to bioaccumulate

12.4 Mobility

Mobility
Dispersible in water. See component information below.

Chemical Name	Mobility
Ethylene Glycol	Completely soluble

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Ethylene Glycol	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group
ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated

ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Ethylene Glycol
Schedule 6
Schedule 5

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

WARNING

Hazard Statements
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Disodium dihydrogen diphosphate

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Disodium dihydrogen diphosphate	231-835-0	7758-16-9	60-100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Oxides of phosphorus.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid excessive heat for prolonged periods of time. Protect from moisture Avoid contact with: Strong alkalies.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Disodium dihydrogen diphosphate	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Disodium dihydrogen diphosphate	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Disodium dihydrogen diphosphate	Not determined	Not determined	Not determined

Chemical Name	Malaysia	Philippines	Russia
Disodium dihydrogen diphosphate	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Repeated or prolonged contact Use protective gloves made of: Nitrile Neoprene PVC Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Crystalline Powder
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	4.0 - 5.0	@ 10 g/l
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	

Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.8 - 1.9 sg	20 °C
Bulk density	1000-1200 kg/m³

Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	222.15
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Avoid excessive heat for prolonged periods of time.

10.5 Incompatible materials

Strong alkalies.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough.

Eye contact Causes serious eye irritation.

Skin contact Prolonged skin contact may cause skin irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Disodium dihydrogen diphosphate	= 1800 mg/kg (Rat)	No data available	> 0.58 mg/L (Rat) 4 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Eye contact.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Disodium dihydrogen diphosphate	No information available	No information available	No information available

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR002503
Group number	6.4A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	11-Jun-2014
Revision date	06-Jul-2017
Version	2
This SDS has been revised in the following section(s)	All sections Product Code change No changes with regard to classification have been made.

Document group:	16-2219-0	**Version number:**	4.00
Issue Date:	27/09/2017	**Supersedes date:**	06/10/2014

This Safety Data Sheet has been prepared in accordance with the Preparation of Safety Data Sheets for Hazardous Chemicals Code of Practice (Safe Work Australia, December 2011)

SECTION 1: Identification

1.1. Product identifier
3M™ Glass Bubbles HGS750, HGS2000, HGS3000, HGS4000, HGS5000, HGS6000, HGS8000X, HGS10000, HGS18000, HGS4K28, HGS19K46

Product Identification Numbers

98-0212-2986-3	98-0212-2988-9	98-0212-3010-1	98-0212-3011-9	98-0212-3012-7
98-0212-3014-3	98-0212-3015-0	98-0212-3016-8	98-0212-3018-4	98-0212-3038-2
98-0212-3086-1	98-0212-3302-2	98-0212-3523-3	WF-6009-1424-7	WF-6009-1425-4

1.2. Recommended use and restrictions on use

Recommended use
Downhole Oil and Gas Applications, Industrial use.

For Industrial or Professional use only.

1.3. Supplier's details
Address: 3M Australia - Building A, 1 Rivett Road, North Ryde NSW 2113
Telephone: 136 136
E Mail: productinfo.au@mmm.com
Website: www.3m.com.au

1.4. Emergency telephone number
EMERGENCY: 1800 097 146 (Australia only)

SECTION 2: Hazard identification

This product is NOT classified as a hazardous chemical according to the Model Work Health and Safety Regulations, 2011, in accordance with applicable State and Territory legislation.

Refer to Section 14 of this Safety Data Sheets for product Dangerous Goods Classification.

2.1. Classification of the substance or mixture
Not applicable.

2.2. Label elements

Signal word
Not applicable.

Symbols
Not applicable.

Pictograms
Not applicable.

2.3. Other assigned/identified product hazards
None known.

2.4. Other hazards which do not result in classification
May be harmful if swallowed.

SECTION 3: Composition/information on ingredients

This material is a mixture.

Ingredient	CAS Nbr	% by Weight
SODA LIME BOROSILICATE GLASS	65997-17-3	97 - 100

SECTION 4: First aid measures

4.1. Description of first aid measures

Inhalation
Remove person to fresh air. If you feel unwell, get medical attention.

Skin contact
Wash with soap and water. If signs/symptoms develop, get medical attention.

Eye contact
Flush with large amounts of water. Remove contact lenses if easy to do. Continue rinsing. If signs/symptoms persist, get medical attention.

If swallowed
Rinse mouth. If you feel unwell, get medical attention.

4.2. Most important symptoms and effects, both acute and delayed
See Section 11.1. Information on toxicological effects.

4.3. Indication of any immediate medical attention and special treatment required
Not applicable

SECTION 5: Fire-fighting measures

5.1. Suitable extinguishing media
Material will not burn. Use a fire fighting agent suitable for the surrounding fire.

5.2. Special hazards arising from the substance or mixture
None inherent in this product.

5.3. Special protective actions for fire-fighters
No special protective actions for fire-fighters are anticipated.

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures
Evacuate area. Ventilate the area with fresh air. For large spill, or spills in confined spaces, provide mechanical ventilation to disperse or exhaust vapors, in accordance with good industrial hygiene practice. Refer to other sections of this SDS for information regarding physical and health hazards, respiratory protection, ventilation, and personal protective equipment.

6.2. Environmental precautions
Avoid release to the environment.

6.3. Methods and material for containment and cleaning up
Collect as much of the spilled material as possible. Use wet sweeping compound or water to avoid dusting. Sweep up. Place in a closed container approved for transportation by appropriate authorities. Clean up residue. Seal the container. Dispose of collected material as soon as possible in accordance with applicable local/regional/national/international regulations.

SECTION 7: Handling and storage

7.1. Precautions for safe handling
For industrial or professional use only. Avoid breathing dust/fume/gas/mist/vapours/spray. Do not eat, drink or smoke when using this product. Wash thoroughly after handling.

7.2. Conditions for safe storage including any incompatibilities
No special storage requirements.

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Occupational exposure limits
If a component is disclosed in section 3 but does not appear in the table below, an occupational exposure limit is not available for the component.

Ingredient	CAS Nbr	Agency	Limit type	Additional comments
Glass filaments	65997-17-3	Australia OELs	TWA(8 hours):0.5 fibers/ml;TWA(as fiber)(8 hours):0.5 fibers/ml	
SODA LIME BOROSILICATE GLASS	65997-17-3	Manufacturer determined	TWA(as dust):10 mg/m3	

ACGIH : American Conference of Governmental Industrial Hygienists
AIHA : American Industrial Hygiene Association
Australia OELs : Australia. Adopted National Exposure Standards for Atmospheric Contaminants in the Occupational Environment
CMRG : Chemical Manufacturer's Recommended Guidelines
TWA: Time-Weighted-Average
STEL: Short Term Exposure Limit
CEIL: Ceiling
Sen: Sensitiser
Sk: Absorption through the skin may be a significant source of exposure.

8.2. Exposure controls

8.2.1. Engineering controls
Provide appropriate local exhaust ventilation at transfer points. Use general dilution ventilation and/or local exhaust ventilation to control airborne exposures to below relevant Exposure Limits and/or control dust/fume/gas/mist/vapours/spray.

If ventilation is not adequate, use respiratory protection equipment.

8.2.2. Personal protective equipment (PPE)

Eye/face protection

Select and use eye/face protection to prevent contact based on the results of an exposure assessment. The following eye/face protection(s) are recommended:
Safety glasses with side shields.

Select and use eye protection in accordance with AS/NZS 1336. Eye protection should comply with the performance specifications of AS/NZS 1337.

Skin/hand protection
No chemical protective gloves are required.

Respiratory protection

Wear respiratory protection if ventilation is inadequate to prevent overexposure. An exposure assessment may be needed to decide if a respirator is required. If a respirator is needed, use respirators as part of a full respiratory protection program. Based on the results of the exposure assessment, select from the following respirator type(s) to reduce inhalation exposure:
Half facepiece or full facepiece air-purifying respirator suitable for particulates.

For questions about suitability for a specific application, consult with your respirator manufacturer.
Select and use respirators according to AS/NZS 1715. Respirators should comply with AS/NZS 1716 performance specifications. For information about respirators, call 3M on 1800 024 464.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

Physical state	Solid.
Specific Physical Form:	Fine Powder < 100 microns
Appearance/Odour	White, Odourless
Odour threshold	*Not applicable.*
Melting point/Freezing point	*No data available.*
Boiling point/Initial boiling point/Boiling range	*Not applicable.*
Flash point	*Not applicable.*
Evaporation rate	*Not applicable.*
Flammability (solid, gas)	Not classified
Flammable Limits(LEL)	*Not applicable.*
Flammable Limits(UEL)	*Not applicable.*
Vapour pressure	*Not applicable.*
Vapour density	*Not applicable.*
Density	0.1 - 0.6 g/cm3
Relative density	0.1 - 0.6 [*Ref Std:*WATER=1]
Water solubility	Negligible
Solubility- non-water	*Not applicable.*
Partition coefficient: n-octanol/water	*No data available.*
Autoignition temperature	*Not applicable.*
Decomposition temperature	*Not applicable.*
Viscosity	*Not applicable.*
Molecular weight	*No data available.*
Volatile organic compounds (VOC)	*Not applicable.*
Percent volatile	< 0.5 % weight

Softening point	>=600 ºC
VOC less H2O & exempt solvents	*Not applicable.*

SECTION 10: Stability and reactivity

10.1 Reactivity
This material is considered to be non reactive under normal use conditions

10.2 Chemical stability
Stable.

10.3. Conditions to avoid
None known.

10.4. Possibility of hazardous reactions
Hazardous polymerisation will not occur.

10.5 Incompatible materials
None known.

10.6 Hazardous decomposition products

Substance	**Condition**
Oxides of sulphur.	If Breakage Occurs

SECTION 11: Toxicological information

The information below may not be consistent with the material classification in Section 2 if specific ingredient classifications are mandated by a competent authority. In addition, toxicological data on ingredients may not be reflected in the material classification and/or the signs and symptoms of exposure, because an ingredient may be present below the threshold for labelling, an ingredient may not be available for exposure, or the data may not be relevant to the material as a whole.

11.1 Information on Toxicological effects

Signs and Symptoms of Exposure

Based on test data and/or information on the components, this material may produce the following health effects:

Inhalation
Respiratory tract irritation: Signs/symptoms may include cough, sneezing, nasal discharge, headache, hoarseness, and nose and throat pain.

Skin contact
Mechanical skin irritation: Signs/symptoms may include abrasion, redness, pain, and itching.

Eye contact
Mechanical eye irritation: Signs/symptoms may include pain, redness, tearing and corneal abrasion.

Ingestion
May be harmful if swallowed.
Gastrointestinal irritation: Signs/symptoms may include abdominal pain, stomach upset, nausea, vomiting and diarrhoea.

Toxicological Data

If a component is disclosed in section 3 but does not appear in a table below, either no data are available for that endpoint or the data are not sufficient for classification.

Acute Toxicity

Name	Route	Species	Value
Overall product	Ingestion		No data available; calculated ATE2,000 - 5,000 mg/kg
SODA LIME BOROSILICATE GLASS	Dermal		LD50 estimated to be > 5,000 mg/kg
SODA LIME BOROSILICATE GLASS	Ingestion		LD50 estimated to be 2,000 - 5,000 mg/kg

ATE = acute toxicity estimate

Skin Corrosion/Irritation

Name	Species	Value
SODA LIME BOROSILICATE GLASS	Professional judgement	No significant irritation

Serious Eye Damage/Irritation

Name	Species	Value
SODA LIME BOROSILICATE GLASS	Professional judgement	No significant irritation

Skin Sensitisation

For the component/components, either no data are currently available or the data are not sufficient for classification.

Respiratory Sensitisation

For the component/components, either no data are currently available or the data are not sufficient for classification.

Germ Cell Mutagenicity

Name	Route	Value
SODA LIME BOROSILICATE GLASS	In Vitro	Some positive data exist, but the data are not sufficient for classification

Carcinogenicity

Name	Route	Species	Value
SODA LIME BOROSILICATE GLASS	Inhalation	Multiple animal species	Some positive data exist, but the data are not sufficient for classification

Reproductive Toxicity

Reproductive and/or Developmental Effects

For the component/components, either no data are currently available or the data are not sufficient for classification.

Target Organ(s)

Specific Target Organ Toxicity - single exposure

For the component/components, either no data are currently available or the data are not sufficient for classification.

Specific Target Organ Toxicity - repeated exposure

Name	Route	Target Organ(s)	Value	Species	Test result	Exposure Duration
SODA LIME BOROSILICATE GLASS	Inhalation	respiratory system	Not classified	Human	NOAEL not available	occupational exposure

Aspiration Hazard
For the component/components, either no data are currently available or the data are not sufficient for classification.

Exposure Levels
Refer Section **8.1 Control Parameters** of this Safety Data Sheet.

Interactive Effects
Not determined.

SECTION 12: Ecological information

The information below may not be consistent with the material classification in Section 2 if specific ingredient classifications are mandated by a competent authority. Additional information leading to material classification in Section 2 is available upon request. In addition, environmental fate and effects data on ingredients may not be reflected in this section because an ingredient is present below the threshold for labelling, an ingredient is not expected to be available for exposure, or the data is considered not relevant to the material as a whole.

12.1. Toxicity

Acute aquatic hazard:
Not acutely toxic to aquatic life by GHS criteria.

Chronic aquatic hazard:
Not chronically toxic to aquatic life by GHS criteria.

No product test data available.

Material	CAS Number	Organism	Type	Exposure	Test endpoint	Test result
SODA LIME BOROSILICATE GLASS	65997-17-3	Green algae	Experimental	72 hours	EC50	>1,000 mg/l
SODA LIME BOROSILICATE GLASS	65997-17-3	Water flea	Experimental	72 hours	EC50	>1,000 mg/l
SODA LIME BOROSILICATE GLASS	65997-17-3	Zebra Fish	Experimental	96 hours	LC50	>1,000 mg/l
SODA LIME BOROSILICATE GLASS	65997-17-3	Green algae	Experimental	72 hours	NOEC	>=1,000 mg/l

12.2. Persistence and degradability

Material	CAS Number	Test type	Duration	Study Type	Test result	Protocol
SODA LIME BOROSILICATE GLASS	65997-17-3	Data not available or insufficient for classification	N/A	N/A	N/A	N/A

12.3 : Bioaccumulative potential

Material	CAS Number	Test type	Duration	Study Type	Test result	Protocol
SODA LIME BOROSILICATE GLASS	65997-17-3	Data not available or insufficient for	N/A	N/A	N/A	N/A

		classification				

12.4. Mobility in soil
Please contact manufacturer for more details

12.5 Other adverse effects
No information available.

SECTION 13: Disposal considerations

13.1. Disposal methods
Dispose of contents/ container in accordance with the local/regional/national/international regulations.

Incinerate in a permitted waste incineration facility.

SECTION 14: Transport Information

Australian Dangerous Goods Code (ADG) - Road/Rail Transport
UN No.: Not applicable.
Proper shipping name: Not applicable.
Class/Division: Not applicable.
Sub Risk: Not applicable.
Packing Group: Not applicable.

Hazchem Code: Not applicable
IERG: Not applicable.

International Air Transport Association (IATA) - Air Transport
UN No.: Not applicable.
Proper shipping name: Not applicable.
Class/Division: Not applicable.
Sub Risk: Not applicable.
Packing Group: Not applicable.

International Maritime Dangerous Goods Code (IMDG)- Marine Transport
UN No.: Not applicable.
Proper shipping name: Not applicable.
Class/Division: Not applicable.
Sub Risk: Not applicable.
Packing Group: Not applicable.
Marine Pollutant: Not applicable.

SECTION 15: Regulatory information

15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture

Australian Inventory Status:
This product is defined as an article under the Industrial Chemicals (Notification and Assessment) Act 1989, as amended, and is exempt from inventory requirements under the Industrial Chemicals (Notification and Assessment) Act 1989 as amended.

Poison Schedule: This product is an article therefore the Standard for the Uniform Scheduling of Medicines and Poisons Schedule is not applicable.

SECTION 16: Other information

Revision information:
Update to product identification numbers.

DISCLAIMER: The information on this Safety Data Sheet is based on our experience and is correct to the best of our knowledge at the date of publication, but we do not accept any liability for any loss, damage or injury resulting from its use (except as required by law). The information may not be valid for any use not referred to in this Safety Data Sheet or use of the product in combination with other materials. For these reasons, it is important that customers carry out their own test to satisfy themselves as to the suitability of the product for their own intended applications.
Greenguard ® is a United States based program. The 'Low VOC' reference related to United States Federal and State regulations exemptions for some solvents.

Health hazards

Specific target organ toxicity - Repeated exposure	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H373 - May cause damage to organs through prolonged or repeated exposure

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P314 - Get medical advice/attention if you feel unwell
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Quartz, Crystalline silica

Respirable Crystalline Silica (Quartz)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Quartz, Crystalline silica	238-878-4	14808-60-7	60-100
Respirable Crystalline Silica (Quartz)	238-878-4	14808-60-7	<10

3.2 Mixtures

Not applicable

Comments
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
React with hydrofluoric acid (HF) forming toxic gas (SiF4).

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Avoid dust formation. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Hydrofluoric acid (HF) Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Respirable Crystalline Silica (Quartz)	0.025 mg/m³ TWA	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against dusts Safety glasses with side-shields Tightly fitting safety goggles

Hand protection Wear gloves according to EN 374 to protect against skin effects from powders Repeated or prolonged contact Use protective gloves made of: Nitrile Neoprene gloves Frequent change is advisable

Respiratory protection In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear appropriate personal protective clothing to prevent skin contact Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Solid
Appearance Powder
Odor Odorless
Color Tan or White

Odor threshold Not applicable

Property	Values	Remarks
pH	Not applicable	
pH @ dilution	No information available	
Melting / freezing point	> 1700 °C / 3092 °F	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	2.50 - 2.70	@20 °C
Bulk density	1100- 1600 kg/m^3	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties Not applicable
Oxidizing properties None known.

9.2 Other information

Pour point No information available
Molecular weight No information available
VOC content(%) No information available
Density No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

React with hydrofluoric acid (HF) forming toxic gas (SiF4).

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

Hazardous Reactions
None known.

10.4 Conditions to avoid

Avoid dust formation.

10.5 Incompatible materials

Hydrofluoric acid (HF). Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough. May cause respiratory irritation. Repeated or prolonged inhalation of crystalline silica dust can cause delayed lung injury, and other diseases, including silicosis and lung cancer.

Eye contact Dust may cause mechanical irritation.

Skin contact Repeated exposure may cause skin dryness or cracking.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Quartz, Crystalline silica	No data available	No data available	No data available
Respirable Crystalline Silica (Quartz)	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Contains a known or suspected carcinogen. Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Skin contact. Eye contact.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Category 2.

Target organ effects Respiratory system. Lungs.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Quartz, Crystalline silica	No information available	No information available	No information available
Respirable Crystalline Silica (Quartz)	No information available	No information available	No information available

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

Chemical Name	Persistence and degradability
Quartz, Crystalline silica	Inorganic compound

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

Chemical Name	Bioaccumulation
Quartz, Crystalline silica	Product/Substance is inorganic

12.4 Mobility

Mobility
The product is insoluble and sinks in water.

Chemical Name	Mobility
Quartz, Crystalline silica	Insoluble in water

Mobility in soil
No information available.

Chemical Name	Mobility in soil
Quartz, Crystalline silica	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

Safety Data Sheet
Silicate Additive D75

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Silicate Additive D75
Product code D075

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains No hazardous components

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature

Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Contact with metals may evolve flammable hydrogen gas.

Hazardous combustion products
Thermal decomposition can lead to release of toxic and corrosive gases/vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin, eyes and clothing. Avoid spills and splashing during use. Do not breathe vapors or spray mist.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep at temperatures above > 32F /0°C Avoid contact with: Strong acids Metals Aluminum Zinc Steel
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.
Packaging materials to be avoided	Metal Aluminium Zinc Steel

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: PVC Rubber Neoprene Nitrile Break through time >480 minutes Glove thickness >0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	Odorless
Color	Colorless
Odor threshold	Not applicable

Property	Values	Remarks
pH	11	
pH @ dilution	No information available	
Melting / freezing point	- 1 °C / 30 °F	
Boiling point/range	101 °C / 214 °F	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	<1 kPa	
Vapor density	No information available	
Specific gravity	1.3 - 1.6	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	10-10000 mPa s	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Contact with metals may evolve flammable hydrogen gas.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep at temperatures above > 32°F / 0°C.

10.5 Incompatible materials

Aluminum. Zinc. Metals. Strong acids. Steel.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation. Skin contact. Eye contact.

Routes of entry	None known.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Large amounts will affect pH and harm aquatic organisms

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves and eye/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
Sodium carbonate

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Sodium carbonate	207-838-8	497-19-8	60-100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Seek medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Avoid dust formation.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading and keep powder dry.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing Do not eat, drink or smoke when using this product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture Avoid contact with water and moist air - product is hygroscopic. Store away from incompatibles, Powdered aluminum Strong acids

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Impervious gloves made of: Nitrile PVA Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear appropriate personal protective clothing to prevent skin contact Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	11	
pH @ dilution	No information available	
Melting / freezing point	851 °C / 1564 °F	
Boiling point/range	Not applicable	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	Not applicable	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	

Vapor pressure	Not applicable	
Vapor density	Not applicable	
Specific gravity	2.5	@20 °C
Bulk density	No information available	
Relative density	2.53	@ 20°C.
Water solubility	212.5g/L	@ 20 °C
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	>400°C/ 752°F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Decomposes by reaction with strong acids.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Avoid contact with water and moist air - product is hygroscopic.

10.5 Incompatible materials

Powdered aluminum. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and

cough.

Eye contact Causes serious eye irritation. May cause pain, redness, discomfort.

Skin contact May cause skin irritation and/or dermatitis.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium carbonate	= 4090 mg/kg (Rat)	No data available	= 2300 mg/m³ (Rat) 2 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Skin contact. Eye contact. Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Large amounts will affect pH and harm aquatic organisms

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium carbonate	310 - 1220 mg/L LC50 Pimephales promelas 96 h = 300 mg/L LC50 Lepomis macrochirus 96 h	= 242 mg/L EC50 Nitzschia 120 h	= 265 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Sodium bromide

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of irritating gases and vapors

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Sodium bromide	231-599-9	7647-15-6	30-60

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
Do not use water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Bromine, bromine oxides and hydrogen bromide, Sodium oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Acids Metals Bromine trifluoride.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Sodium bromide	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Eye protection must conform to standard EN 166 Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene PVC Break through time >240 minutes Glove thickness =0.10 - 0.20 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	Odorless
Color	Clear
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	5.74 - 5.75	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	

Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.078 - 1.508	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	~ 800 °C / ~1472°F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	Not determined	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Heat, flames and sparks.

10.5 Incompatible materials

Acids. Heavy metals. Bromine trifluoride.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium bromide	= 3500 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other

			aquatic invertebrates
Sodium bromide	0.054 - 0.081 mg/L LC50 Oncorhynchus mykiss 96 h > 1000 mg/L LC50 Lepomis macrochirus 96 h 15614 - 17428 mg/L LC50 Pimephales promelas 96 h = 16000 mg/L LC50 Poecilia reticulata 96 h > 1000 mg/L LC50 Oncorhynchus mykiss 96 h = 24000 mg/L LC50 Oryzias latipes 96 h 24000 - 96000 mg/L LC50 Oryzias latipes 96 h 16000 - 24000 mg/L LC50 Poecilia reticulata 96 h	5800 - 24000 mg/L EC50 Scenedesmus pannonicus 96 h	5700 - 10800 mg/L EC50 Daphnia magna 48 h 5800 - 48000 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
The product has been assessed and contained in Chapters 17/18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Ship Type:- 3. Pollution Category:- Y. Proper Shipping Name: Sodium bromide solution (50% or less)

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

Sodium Chloride	231-598-3	7647-14-5	30-60

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors Oxides of:, Sodium, Chlorides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical

hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Butyl PVC Break through time >480 minutes Glove thickness =>0.5 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	Odorless
Color	Colorless
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	8.5	
pH @ dilution	No information available	
Melting / freezing point	-5 °C / 23 °F	
Boiling point/range	106 °C / 222.8 °F	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	

Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	1.008 - 1.200 g/cm³	@ 20°C.
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium Chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Listed on PLONOR list of OSPAR

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium Chloride	4747 - 7824 mg/L LC50	No information available	340.7 - 469.2 mg/L EC50 Daphnia

	Oncorhynchus mykiss 96 h 6420 - 6700 mg/L LC50 Pimephales promelas 96 h = 7050 mg/L LC50 Pimephales promelas 96 h 6020 - 7070 mg/L LC50 Pimephales promelas 96 h = 12946 mg/L LC50 Lepomis macrochirus 96 h 5560 - 6080 mg/L LC50 Lepomis macrochirus 96 h		magna 48 h = 1000 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
The product has been assessed and contained in Chapters 17/18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Ship Type:- 3. Pollution Category:- Z.
Proper Shipping Name: Drilling brines, including: calcium bromide solution, calcium chloride solution and sodium chloride solution.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Sodium bromide

Sodium chloride

2.3 Other hazards

Thermal decomposition can lead to release of irritating gases and vapors
Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Sodium bromide	231-599-9	7647-15-6	30-60
Sodium chloride	231-598-3	7647-14-5	10-30

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Seek medical attention if irritation occurs.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the

length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Bromine, bromine oxides and hydrogen bromide, Chlorine, Sodium oxides, Chlorides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place.

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Butyl PVC Break through time >480 minutes Glove thickness >=0.5 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Chemical respirator with inorganic vapour cartridge (Grey B). At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium bromide	= 3500 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	No data available
Sodium chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium bromide	0.054 - 0.081 mg/L LC50 Oncorhynchus mykiss 96 h > 1000 mg/L LC50 Lepomis macrochirus 96 h 15614 - 17428 mg/L LC50 Pimephales promelas 96 h = 16000 mg/L LC50 Poecilia reticulata 96 h > 1000 mg/L LC50 Oncorhynchus mykiss 96 h = 24000 mg/L LC50 Oryzias latipes 96 h 24000 - 96000 mg/L LC50 Oryzias latipes 96 h 16000 - 24000 mg/L LC50 Poecilia reticulata 96 h	5800 - 24000 mg/L EC50 Scenedesmus pannonicus 96 h	5700 - 10800 mg/L EC50 Daphnia magna 48 h 5800 - 48000 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues / unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
The product has been assessed and contained in Chapters 17/18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code. Ship Type:- 3. Pollution Category:- Z.
Proper Shipping Name: Drilling brines, including: calcium bromide solution, calcium chloride solution and sodium chloride solution.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Sodium bromide
Schedule 4
New Zealand

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Sodium formate

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Sodium formate	205-488-0	141-53-7	60-100

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Sodium.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Strong acids

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Sodium formate	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Sodium formate	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Sodium formate	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Sodium formate	Not determined	Not determined	10 mg/m³ MAC
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Sodium formate	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC Break through time >480 minutes Glove thickness >=0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Provide eyewash station.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	Odorless
Color	Clear
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	8.6	10 % solution
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	0.99 - 1.318	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Soluble in water	

Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	29 cP (40 wt% solution)
log Pow	No information available

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from sources of ignition - No smoking.

10.5 Incompatible materials

Strong acids. Formic acid may be formed.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium formate	= 11200 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry No route of entry noted.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
Listed on PLONOR list of OSPAR

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium formate	= 5000 mg/L LC50 Lepomis macrochirus 24 h	No information available	> 1000 mg/L EC50 Daphnia magna 24 h

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated

ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification Not classified

HSNO approval no. Not required.

Group number Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA) Complies
Canada (DSL) Complies
Philippines (PICCS) Complies
Japan (ENCS) Complies
China (IECSC) Complies

Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

Supersedes Date: 20-Jun-2018

Safety Data Sheet
SODIUM HYDROXIDE

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name SODIUM HYDROXIDE
Product code PID15038A

Synonyms CAUSTIC SODA, SODIUM HYDROXIDE PRILLS
Molecular weight 49.99 g/mol

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use pH modifier

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Skin corrosion/irritation	Category 1 Subcategory 1A
Serious eye damage/eye irritation	Category 1

Environmental hazards Not classified

Physical Hazards

Substances/mixtures corrosive to metal	Category 1

2.2 Label elements

Signal word
DANGER

Hazard Statements
H314 - Causes severe skin burns and eye damage
H290 - May be corrosive to metals

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P234 - Keep only in original container
P264 - Wash face, hands and any exposed skin thoroughly after handling
P301 + P330 + P331 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P363 - Wash contaminated clothing before reuse
P390 - Absorb spillage to prevent material damage
P406 - Store in corrosive resistant stainless steel container with a resistant inner liner

Contains
Sodium hydroxide

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Contact with metals may evolve flammable hydrogen gas
The product reacts with water and will generate heat.

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Sodium hydroxide	215-185-5	1310-73-2	60-100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. If not breathing, give artificial respiration. Seek medical attention at once.

Ingestion Do NOT induce vomiting. Get immediate medical attention. Rinse mouth. Risk of product entering the lungs on vomiting after ingestion. Never give anything by mouth to an unconscious person.

Skin contact Promptly wash contaminated skin with soap or mild detergent and water. Promptly remove clothing if soaked through and wash as above. Burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Chemical burns must be treated by a physician.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get immediate medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General advice Seek medical attention for all burns, regardless how minor they may seem. The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Contact with metals may evolve flammable hydrogen gas. The product reacts with water and will generate heat.

Hazardous combustion products
Thermal decomposition can lead to release of toxic and corrosive gases/vapors Sodium oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Keep people away from and upwind of spill/leak. Do not get on skin or clothing. Wash thoroughly after handling. Avoid dust formation. Do not breathe dust. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Avoid dust formation. Sweep up and shovel into suitable containers for disposal. Flush area with flooding quantities of water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Do not get in eyes, on skin or on clothing. Avoid dust formation. Do not breathe dust. Avoid spills and splashing during use. Reacts violently with water.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture

Reacts violently with water Store in original container. Avoid contact with: Metals Acids

Storage class Corrosive storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Sodium hydroxide	Not determined	2 mg/m³ Peak	2 mg/m³ Ceiling
Chemical Name	**India**	**Indonesian**	**Japan**
Sodium hydroxide	2 mg/m³ Ceiling	2 mg/m³ Ceiling	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Sodium hydroxide	Not determined	2.0 mg/m³ STEL	2 mg/m³ Ceiling
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Sodium hydroxide	2 mg/m³ Ceiling	2 mg/m³ TWA	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Sodium hydroxide	2 mg/m³ TWA	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required. Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against powders and dusts
Chemical splash goggles and/or face shield

Hand protection Wear gloves according to EN 374 to protect against skin effects from powders
Impervious gloves made of: Nitrile Rubber PVC
Break through time >480 minutes
Glove thickness 0.5 mm
Frequent change is advisable

Respiratory protection In case of insufficient ventilation wear suitable respiratory equipment Use the indicated respiratory protection if the occupational exposure limit is exceeded and/or in case of product release (dust) Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Pellets
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	14.0	@ 5%
Melting / freezing point	318 °C / 604.4 °F	
Boiling point/range	1390 °C / 2534 °F	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	3.5 hPa	@ 800 °C
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	1.1-1.25 g/cm3	
Relative density	2.13 g/cm3	@ 25°C.
Water solubility	Completely soluble	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	Not applicable

9.2 Other information

Pour point	No information available
Molecular weight	49.99 g/mol
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Corrosive. Corrosive to Metals. Contact with metals may evolve flammable hydrogen gas. Reacts violently with water.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Do not add water directly to the product. It may cause a violent reaction. Avoid dust formation.

10.5 Incompatible materials

Acids. Metals. Water.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhaled corrosive substances can lead to a toxic edema of the lungs. Contact with moist mucous membranes of the respiratory system can cause burns and lung damage. Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough.

Eye contact Causes serious eye damage.

Skin contact Causes burns.

Ingestion Causes burns. Can burn mouth, throat, and stomach.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium hydroxide	No data available	1350 mg/kg (Rabbit)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation. Ingestion. Skin contact. Eye contact.
Routes of entry	Skin contact. Eye contact. Ingestion. Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium hydroxide	= 45.4 mg/L LC50 Oncorhynchus mykiss 96 h	No information available	No information available

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Sodium hydroxide	Inorganic compound

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Sodium hydroxide	Product/Substance is inorganic

12.4 Mobility

Mobility
See component information below.

Chemical Name	Mobility
Sodium hydroxide	Soluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Sodium hydroxide	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG) UN1823
UN No. (IMDG/ANTAQ) UN1823
UN No. (ICAO/ANAC) UN1823

14.2. UN proper shipping name
SODIUM HYDROXIDE, SOLID,

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class 8
IMDG/ANTAQ Hazard class 8
ICAO/ANAC Hazard class/division 8

14.4 Packing group
ADR/RID/ADN/ADG Packing group II
IMDG/ANTAQ Packing group II
ICAO/ANAC Packing group II

14.5 Environmental hazard
No

14.6 Special precautions

Hazard identification no (ADR)	80
EmS (IMDG)	F-A, S-B
Emergency Action Code (EAC)	2W
Tunnel restriction code	(E)

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Sodium hydroxide
Schedule 6
Schedule 5

New Zealand Hazard Classification	Classified
HSNO approval no.	HSR001547
Group number	n/a

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains No hazardous components

2.3 Other hazards

Suspended dust may present a dust explosion hazard
Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

Not applicable

3.2 Mixtures

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Nitrogen oxides (NOx), Hydrogen cyanide (hydrocyanic acid) may be produced in the event of combustion in an oxygen deficient atmosphere.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Material becomes extremely slippery when wet.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up

Take precautionary measures against static discharges. Sweep up and shovel into suitable containers for disposal. Avoid dust formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes extremely slippery when wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Suspended dust may present a dust explosion hazard Protect from moisture Avoid heat, flames and other sources of ignition. Avoid contact with: Strong oxidizing agents Strong acids
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene PVC Frequent change is advisable

Respiratory protection No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Granules Dust
Odor	Slight
Color	Off-white - Cream
Odor threshold	Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	7	@1%
Melting / freezing point	> 150 °C / > 302 °F	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.5	20 °C
Bulk density	392 kg/m³ / 24.5 lb/ft³	
Relative density	0.2 - 0.9	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	> 150° / 302°F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	<0	

Explosive properties Suspended dust may present a dust explosion hazard
Oxidizing properties None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

Hazardous Reactions
Oxidizing agents may cause exothermic reactions.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Take precautionary measures against static charges. Protect from moisture. Avoid dust formation.

10.5 Incompatible materials

Strong oxidizing agents. Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

LD50 Oral	> 5000 mg/kg (rat) estimated (MIXTURE)
LD50 Dermal	> 5000 mg/kg (rat) estimated (MIXTURE)

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
IC50/Algae/72 hrs. : > 100 mg/L (Estimated) (MIXTURE).

Toxicity to fish
LC50/Oncorhynchus mykiss/96 hrs. : > 100 mg/L (Estimated) (MIXTURE).

Toxicity to daphnia and other aquatic invertebrates
EC50/Daphina/48 hrs. : > 100 mg/L (Estimated) (MIXTURE).

12.2 Persistence and degradability

Not readily biodegradable.

12.3 Bioaccumulative potential

The product does not contain any substances expected to be bioaccumulating.

log Pow
<0

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Harmful organic chemical fumes.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover with plastic sheet to prevent spreading.

Methods for cleaning up
Avoid dust formation. Take up mechanically and collect in suitable container for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing Do not eat, drink or smoke when using this product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Provide appropriate exhaust ventilation at places where dust is formed. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Protect from moisture Keep at < 122 °F/ 50°C Do not store and transport with oxidizers, acids and bases.
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Impervious gloves made of: Nitrile Neoprene gloves Frequent change is advisable
Respiratory protection	In case of insufficient ventilation, wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before breaks and immediately after handling the product Remove and wash

contaminated clothing before re-use

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Fibrous
Odor	Sweet
Color	White or Light yellow
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	Not applicable	
pH @ dilution	Not applicable	
Melting / freezing point	215 - 225 °C / 419 - 437 °F	
Boiling point/range	Not applicable

Relative density	1.2-1.3	@ 25°C.
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	388 °C / 730 °F	
Decomposition temperature	> 230 °C / >446 °F	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Avoid contact with heat, sparks, open flame, and static discharge. Keep away from direct sunlight. Keep at <50°C / 122°F°C. Protect from moisture.

10.5 Incompatible materials

Strong oxidizing agents. Acids. Bases.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Repeated exposure may cause skin dryness or cracking.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Inhalation. Skin contact. Eye contact.

Routes of entry	No route of entry noted.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Inherently biodegradable.

12.3 Bioaccumulative potential

Product has a low potential to bioconcentrate.

12.4 Mobility

Mobility
Insoluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Supersedes Date: 26-Nov-2014

Safety Data Sheet
Spacer Solvent D231

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Spacer Solvent D231
Product code D231

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Serious eye damage/eye irritation	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves and eye/face protection
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
2,2-dimethyl-1,3-dioxolan-4-ylmethanol

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Combustible liquid
Vapors are heavier than air and may spread along floors

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	202-888-7	100-79-8	60 - 100

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact	Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention if irritation occurs.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Dry chemical, CO_2, alcohol-resistant foam or water spray, Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Combustible material.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Avoid contact with eyes. Keep away from heat, sparks, and flame. Remove all sources of ignition. Ensure adequate ventilation.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. All equipment used when handling the product must be grounded.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Ensure all equipment is electrically grounded before beginning transfer operations.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from direct sunlight. Keep away from open flames, hot surfaces and sources of ignition Avoid excessive heat for prolonged periods of time. Avoid frost. Avoid contact with: Strong oxidizing agents Strong reducing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only. Steel or high density polyethylene (HDPE) container

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Contains no substances with occupational exposure limit values

Component Information

Chemical Name	Arabic	Australia	Egypt
2,2-dimethyl-1,3-dioxolan-4-ylmetha	Not determined	Not determined	Not determined

nol			
Chemical Name	**India**	**Indonesian**	**Japan**
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Wear chemical resistant gloves such as nitrile or neoprene.
Break through time >480 minutes
Glove thickness 0.5 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141)

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use Wash hands before breaks and immediately after handling the product

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Liquid

Appearance	Oily
Odor	Pleasant
Color	Colorless
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	-99 °C/ -146 °F	
Boiling point/range	189 - 191 °C/ 373 - 376 °F	
Flash point	91 °C/ 196 °F	
Evaporation rate (BuAc =1)	= 0.03	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	0.05 hPa (@ 20°C)	
Vapor density	2.6 (air = 1)	
Specific gravity	1.059 - 1.079	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Completely soluble	
Solubility in other solvents	Soluble in hydrocarbons	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	11 mPas @ 20 °C	
log Pow	Not determined	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product. Combustible liquid.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Keep away from direct sunlight. Keep away from open flames, hot surfaces and sources of ignition. Avoid excessive heat for prolonged periods of time. Avoid frost.

10.5 Incompatible materials

Strong oxidizing agents. Strong reducing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	= 7 g/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing. Not classified.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Eye contact. Inhalation. Skin contact.

Routes of entry Eye contact. Inhalation. Skin contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Ecotoxicity effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	15200 - 18300 mg/L LC50 Pimephales promelas 96 h	72 h - ErC50 > 92 mg/L	48 hr EC50: > 96 mg/L

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Inherently biodegradable OECD (302B)

12.3 Bioaccumulative potential

Product has a low potential to bioconcentrate.

Chemical Name	Bioaccumulation
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	log Kow <=3

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Chemical Name	Mobility
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	172 mg/ml@20 °C

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
2,2-dimethyl-1,3-dioxolan-4-ylmethanol	Log Koc: < 1.25

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable None

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Alcohols, C9-11-iso-, C10-rich	271-234-0	68526-85-2	1-5

Comments
The product contains other ingredients which do not contribute to the overall classification.
*Substances which have an EC Number that begins with the number "9" is a Provisional List Number. The list numbers published by ECHA do not have any legal significance. The EC substance definition and related classification & labelling has been developed in the framework of the Regulation (EC) No 1907/2006 (REACH). For information about the related CAS number see section 15 of

this SDS.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. If conscious, drink plenty of water. Never give anything by mouth to an unconscious person. Risk of product entering the lungs on vomiting after ingestion. Seek medical attention.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Seek medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon monoxide, carbon dioxide and unburned hydrocarbons (smoke), Nitrogen oxides (NOx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded Avoid heat, flames and other sources of ignition. Incompatible with oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only. Steel or high density polyethylene (HDPE) container

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits

Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, <2% aromatics OEL vapour (Total Hydrocarbons/RCP) – TWA 1200mg/m³ (165ppm)
Above Occupational Exposure Limit (OEL) is a “in-house” calculated value provided from Suppliers of this component and calculated as per CEFIC/HSPA/UK EH 40 guidelines.

Component Information

Chemical Name	Arabic	Australia	Egypt
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Chemical splash goggles and/or face shield
Hand protection	Wear gloves according to EN 374 resistant to the solvent(s) in use Use protective gloves made of: Nitrile Break through time >480 minutes Glove thickness 0.38 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Respirator with combination filter for vapour/particulate (EN 141) Type A/P3. At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Clear
Odor	None

Molecular weight	No information available
VOC content(%)	None
Density	0.80 ± 0.03 g/ml (@ 20°C)

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid contact with heat, sparks, open flame, and static discharge.

10.5 Incompatible materials

Incompatible with oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information	Prolonged and repeated contact with solvents over a long period may lead to permanent health problems.
Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	Causes serious eye damage.
Skin contact	Repeated exposure may cause skin dryness or cracking.
Ingestion	May be fatal if swallowed and enters airways. Potential for aspiration if swallowed.

Aspiration may cause pulmonary edema and pneumonitis.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	> 5000 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	> 5.2 mg/L (Rat) 4 h
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	> 2000 mg/kg (Rat) OECD 401 Literature data	> 2000 mg/kg (Rabbit) Literature data	No data available
Alcohols, C9-11-iso-, C10-rich	= 4626 mg/kg (Rat)	> 2600 mg/kg (Rabbit)	> 0.6 mg/L (Rat) 6 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of exposure Eye contact. Ingestion.

Routes of entry Ingestion. Skin contact. Eye contact. Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard May be fatal if swallowed and enters airways.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

Harmful to aquatic life with long lasting effects

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	LC50 (Oncorhynchus mykiss (rainbow trout)): 2 - 5 mg/l Exposure time: 96 h	EL50 (Pseudokirchneriella subcapitata (green algae)): > 1 - 3 mg/l	EL50 (Water flea (Daphnia magna)): 1,4 mg/l Exposure time: 48 h

	Test Type: semi-static test Test substance: WAF Method: OECD Test Guideline 203 Remarks: Information given is based on data obtained from similar substances.	Exposure time: 72 h Test Type: static test Test substance: WAF Method: OECD Test Guideline 201 Remarks: Information given is based on data obtained from similar substances.	Test Type: static test Test substance: WAF Method: OECD Test Guideline 202 Remarks: Information given is based on data obtained from similar substances.
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	LC50 = 2.4 mg/l 96 h. Litterature data.	EC50 = 18.6 mg/l 75 h. Literature data.	EC50 = 3.2 mg/l. 48h. Literature data.
Alcohols, C9-11-iso-, C10-rich	>10 - <100 mg/l	>10 - <100 mg/l	>10 - <100 mg/l

12.2 Persistence and degradability

Product is biodegradable.

Chemical Name	Persistence and degradability
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	Inherently biodegradable OECD 301F : 58.6% Duration 28 days
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	Readily biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate.

Chemical Name	Bioaccumulation
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	No information available
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	Does not bioaccumulate

12.4 Mobility

Mobility
The product is insoluble and floats on water.

Chemical Name	Mobility
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	No information available
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	Soluble in water

Mobility in soil
No information available.

Chemical Name	Mobility in soil
Hydrocarbons, C11-C14, n-alkanes, isoalkanes, cyclics, < 2% aromatics*	No information available
Amides, C8-18 (even numbered) and C18-unsatd., N, N-bis(hydroxyethyl)*	Not expected to adsorb on soil Notes: Calculated data (in silico)

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Does not comply
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Does not comply

CAS Number 64742-47-8, 68155-07-7 can be used to identify the substance given a list number in section 3 in areas not subject to the REACH regulation.

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains
2.3 Other hazards

Suspended dust may present a dust explosion hazard
Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

Not applicable

3.2 Mixtures

This product does not contain any hazardous ingredients, or ingredients with national workplace exposure limits.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Drink 1 or 2 glasses of water. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Sulphur dioxide.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Material becomes slippery when wet. Use caution if wet. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up

Sweep up and shovel into suitable containers for disposal. Avoid dust formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing.

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place. Suspended dust may present a dust explosion hazard Avoid heat, flames and other sources of ignition. Protect from moisture Avoid contact with: Strong oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required. See section 7 for more information

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European

	Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	Odorless
Color	Dark brown
Odor threshold	Not applicable

Property	Values	Remarks
pH	Not applicable	
pH @ dilution	3.0 - 4.0	2% sol.
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	0.53	20 °C
Bulk density	23.1-26.2 lb/ft³ (370-420 kg/m³)	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	250 - 300 °C / 482 - 572 °F	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Protect from moisture. Avoid dust formation. Avoid heat, flames and other sources of ignition.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.

Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.
Listed on PLONOR list of OSPAR

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues / unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand hazard classification	Not classified.
HSNO approval no.	Not required.
Group number	Not required.

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Does not comply
Japan (ENCS)	Complies
China (IECSC)	Complies

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	500-012-0	9004-77-7	30-60

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. If conscious, drink plenty of water. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Immediate medical attention is required.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands before eating, drinking or smoking Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid contact with: Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Contains no substances with occupational exposure limit values No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**

Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile PVC
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Liquid
Appearance No information available
Odor Slight
Color Yellow
Odor threshold Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	< -10 °C / 14 °F	
Boiling point/range	No information available	
Flash point	> 130 °C / > 266 °F	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	0.93 - 0.97 g/ml

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye damage.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

LD50 Oral > 2000 mg/kg (rat) Calculated (MIXTURE)

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	2630 mg/kg (Rat)	3540 mg/kg bw (Rabbit)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Eye contact.

Routes of entry Eye contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that

large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	LC50 >1800 mg/l, 96h Scophthalmus maximus OECD 203	EC50: 2490 mg/l, 72h Selenastrum capricornutum OECD 201	EC50 >3200 mg/l, 48h Daphnia magna OECD 202

12.2 Persistence and degradability

Product is biodegradable. See component information below.

Chemical Name	Persistence and degradability
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	OECD 301D 76%

12.3 Bioaccumulative potential

The product contains potentially bioaccumulating substances. See component information below.

Chemical Name	Bioaccumulation
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	log Kow 0.44@20°C

12.4 Mobility

Mobility
Insoluble in water. See component information below.

Chemical Name	Mobility
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Soluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Poly(oxy-1,2-ethanediyl), a-butyl-omega-hydroxy	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

No poisons schedule number allocated

New Zealand Hazard Classification Classified

HSNO approval no. HSR002606

Group number 8.3A

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Does not comply
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

Version 2
Revision date 10-Jun-2020
Supersedes Date: 28-Jul-2016

Safety Data Sheet
Swelling Additive D205

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name Swelling Additive D205
Product code D205

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Oilfield Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
256 St. Georges Terrace, Perth WA 6000
+47 5157 7424

SDS@slb.com

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Silicon Dioxide

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Silicon Dioxide	231-545-4	7631-86-9	1-5

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Extinguish all ignition sources. Avoid sparks, flames, heat and smoking.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Avoid generating or breathing dust. Take precautionary measures against static discharges. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Do not breathe dust.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges. Ensure all equipment is electrically grounded before beginning transfer operations.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Keep away from direct sunlight. Avoid excessive heat for prolonged periods of time. Store at ambient conditions Store away from incompatibles, Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits NUI = Nuisance dust, TWA 4mg/m³ Respirable Dust, 10mg/m³ Total Dust.
No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Silicon Dioxide	Not determined	2mg/m³TWArespirable dust	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Silicon Dioxide	10 mg/m³ TWA	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Silicon Dioxide	1 mg/m³ MAC 2 mg/m³ MAC	6.0 mg/m³ TWA	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Silicon Dioxide	Not determined	Not determined	3 mg/m³ STEL 6 mg/m³ STEL 1 mg/m³ TWA 2 mg/m³ TWA Fibrogenic substance also vitreous, in the form of disintegration aerosol 1177 Fibrogenic substance in the form of condensation aerosol, containing >=10% Silicon dioxide 1175, 1176
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Silicon Dioxide	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against dusts Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Use protective gloves made of: Neoprene Nitrile Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before breaks and immediately after handling the product

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Micro-beads
Odor	Odorless
Color	White
Odor threshold	Not applicable

Property	Values	Remarks
pH	Not applicable	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	

Bulk density	300 - 400 Kg/m³	@ 20°C.
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties Suspended dust may present a dust explosion hazard
Oxidizing properties None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	880 - 950 Kg/m³ @20°C

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Take precautionary measures against static charges. Keep away from open flames, hot surfaces and sources of ignition. Keep away from direct sunlight. Avoid excessive heat for prolonged periods of time. Store at ambient conditions.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Silicon Dioxide	= 7900 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	> 2.2 mg/L (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Skin contact. Ingestion. Eye contact.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
No product level data available. See component information below.

Toxicity to fish
No product level data available. See component information below.

Toxicity to daphnia and other aquatic invertebrates
No product level data available. See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Silicon Dioxide	= 5000 mg/L LC50 Brachydanio rerio 96 h	= 440 mg/L EC50 Pseudokirchneriella subcapitata 72 h	= 7600 mg/L EC50 Ceriodaphnia dubia 48 h

12.2 Persistence and degradability

The product is not expected to be biodegradable.

Chemical Name	Persistence and degradability
Silicon Dioxide	No information available

12.3 Bioaccumulative potential

Bioaccumulation is unlikely.

Chemical Name	Bioaccumulation
Silicon Dioxide	Not likely to bioaccumulate

12.4 Mobility

Mobility
The product is insoluble and floats on water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Quartz, Crystalline silica	238-878-4	14808-60-7	60 - 100

Comments
The product contains other ingredients which do not contribute to the overall classification.
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water. Remove contaminated clothing and

shoes. Seek medical attention if irritation occurs.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Suspended dust may present a dust explosion hazard.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors React with hydrofluoric acid (HF) forming toxic gas (SiF4).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Avoid dust formation. Do not dry sweep dust. Wet dust with water before sweeping or use a vacuum to collect dust. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Do not breathe dust. For personal protection see section 8.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Keep airborne concentrations below exposure limits. Provide appropriate exhaust ventilation at places where dust is formed. Take precautionary measures against static discharges.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Store away from incompatibles, React with hydrofluoric acid (HF) forming toxic gas (SiF4) Strong oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Component Information

Chemical Name	Arabic	Australia	Egypt
Quartz, Crystalline silica	0.1 mg/m³ TWA	0.1mg/m³TWArespirable dust	Not determined

Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Quartz, Crystalline silica	0.025 mg/m³ TWA	Not determined	Not determined

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against dusts Safety glasses with side-shields Tightly fitting safety goggles

Hand protection Wear gloves according to EN 374 to protect against skin effects from powders Repeated or prolonged contact Use protective gloves made of: Nitrile Neoprene gloves Frequent change is advisable

Respiratory protection In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear appropriate personal protective clothing to prevent skin contact Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state Solid
Appearance Powder
Odor Odorless
Color White - Tan

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

React with hydrofluoric acid (HF) forming toxic gas (SiF4).

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Keep away from open flames, hot surfaces and sources of ignition. Take precautionary measures against static charges.

10.5 Incompatible materials

Hydrofluoric acid (HF). Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough. Repeated or prolonged inhalation of crystalline silica dust can cause delayed lung injury, and other diseases, including silicosis and lung cancer.

Eye contact Dust may cause mechanical irritation.

Skin contact Repeated exposure may cause skin dryness or cracking.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Quartz, Crystalline silica	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Contains a known or suspected carcinogen. Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Skin contact. Eye contact.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Category 2.

Target organ effects Lungs. Respiratory system.

Aspiration hazard Not applicable.

11.2 Information on other hazards

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that

large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Quartz, Crystalline silica	No information available	No information available	No information available

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Quartz, Crystalline silica	Inorganic compound

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Quartz, Crystalline silica	Product/Substance is inorganic

12.4 Mobility

Mobility
See component information below.

Chemical Name	Mobility
Quartz, Crystalline silica	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Quartz, Crystalline silica	Not expected to adsorb on soil

12.5 Other adverse effects

None known.

12.6 Other information.

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Maritime transport in bulk according to IMO instruments
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Calcium carbonate

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Calcium carbonate	207-439-9	471-34-1	60-100
Crystalline silica (impurity)	238-878-4	14808-60-7	<1

Comments
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture Avoid contact with: Strong acids

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against powders and dusts Safety glasses with side-shields Tightly fitting safety goggles

Hand protection — Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Neoprene Nitrile Frequent change is advisable

Respiratory protection — When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Protect from moisture.

10.5 Incompatible materials

Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Calcium carbonate	= 6450 mg/kg (Rat)	No data available	No data available
Crystalline silica (impurity)	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Calcium carbonate	No information available	No information available	No information available
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Calcium carbonate	Not Applicable - Inorganic chemical.
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Calcium carbonate	Product/Substance is inorganic
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
See component information below.

Chemical Name	Mobility
Calcium carbonate	Insoluble in water
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Calcium carbonate	Not expected to adsorb on soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

SDS no. PID12188
Version 5
Revision date 15-Mar-2018
Supersedes Date: 16-Mar-2015

Safety Data Sheet
THRUTROL*

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name THRUTROL*
Product code PID12188

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Fluid loss reducer.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080
+47 51577424

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains
2.3 Other hazards

Suspended dust may present a dust explosion hazard
Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on ingredients

3.1 Substances

No classified ingredients, or those having occupational exposure limits, present above the level of disclosure.

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash skin thoroughly with soap and water. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8. Material becomes slippery when wet. Use caution if wet.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Take precautionary measures against static discharges. Sweep up and shovel into suitable containers for disposal. Avoid dust

formation. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Material becomes slippery when wet. Use caution if wet.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing.

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place. Suspended dust may present a dust explosion hazard Protect from moisture Avoid heat, flames and other sources of ignition. Avoid contact with: Strong oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure controls/personal protection

8.1 Control parameters

Exposure limits	NUI = Nuisance dust, TWA 4mg/m^3 Respirable Dust, 10mg/m^3 Total Dust. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against powders and dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient

	ventilation wear suitable respiratory equipment Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder Dust
Odor	Slight
Color	Off-white
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	Not applicable	
pH @ dilution	9.0 - 10.5	@ 4%
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.5	@ 20 °C
Bulk density	30 - 45 lb / ft³	
Relative density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid heat, flames and other sources of ignition. Take precautionary measures against static charges. Protect from moisture. Avoid dust formation.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.

Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Inhalation.
Routes of entry	Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.
The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Product is biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues / unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies

Revision date 08-Jun-2021
Supersedes Date: 18-Jun-2014

Safety Data Sheet
TIC* D65 Dispersant

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name TIC* D65 Dispersant
Product code D065
Country Limitations This SDS is not for use in the European Union (EU).

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
Level 5, 10 Telethon Avenue
Perth WA 6000

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518, Canada 001 613 996 6666

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

Contains
Sodium sulfate (Impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Combustible dust

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Sodium sulfate (Impurity)	231-820-9	7757-82-6	1-5

3.2 Mixtures

Not applicable

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention if irritation occurs.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
Do not use a solid water stream as it may scatter and spread fire.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Suspended dust may present a dust explosion hazard.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx), Sulfur dioxide.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Avoid dust formation. Keep away from combustible material. Avoid contact with heat, sparks, open flame, and static discharge. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Avoid dust formation. Do not dry sweep dust. Wet dust with water before sweeping or use a vacuum to collect dust. Take precautionary measures against static discharges. Use non-sparking tools and equipment. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid handling causing generation of dust. All equipment used when handling the product must be grounded. Avoid breathing dust; if exposed to high dust concentration, leave area immediately. Fine dust dispersed in air may ignite. Take precautionary measures against static discharges.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Do not eat, drink or smoke when using this product Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Provide appropriate exhaust ventilation at places where dust is formed. Keep airborne concentrations below exposure limits. Take precautionary measures against static discharges. Ensure all equipment is electrically grounded before beginning transfer operations.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from direct sunlight. Protect from moisture

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits NUI = Nuisance dust, TWA 4mg/m³ Respirable Dust, 10mg/m³ Total Dust.
Control as an ACGIH particulate not otherwise specified (PNOS): 10 mg/m³ (Inhalable); 3 mg/m³ (Respirable) and an OSHA particulate not otherwise regulated (PNOR): 15 mg/m³ (Total); 5 mg/m³ (Respirable).

Component Information

Chemical Name	**Arabic**	**Australia**	**Egypt**
Sodium sulfate (Impurity)	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Sodium sulfate (Impurity)	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Sodium sulfate (Impurity)	10 mg/m³ MAC	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Sodium sulfate (Impurity)	Not determined	Not determined	10 mg/m³ MAC
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Sodium sulfate (Impurity)	Not determined	Not determined	Not determined

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Use protective gloves made of: Nitrile Neoprene Frequent change is advisable
Respiratory protection	No personal respiratory protective equipment normally required In case of insufficient ventilation wear suitable respiratory equipment Use the indicated respiratory protection if the occupational exposure limit is exceeded and/or in case of product release (dust) Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder
Odor	Faint
Color	Tan

Property	**Values**	**Remarks**
pH	Approximately 10	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	Not applicable	
Flash point	Does not flash	
Evaporation rate (BuAc =1)	Not applicable	
Flammability	Not applicable	
Explosion limits:		

Upper explosion limit	No information available	
Lower explosion limit	No information available	
Vapor pressure	Not applicable	
Relative Vapor Density	Not applicable	
Specific gravity	0.8	20 °C
Bulk density	No information available	
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
Partition Coefficient (n-octanol/water)	No information available	
Density and/or Relative Density	No information available	

Explosive properties	Suspended dust may present a dust explosion hazard
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Avoid contact with heat, sparks, open flame, and static discharge. Protect from moisture. Keep away from direct sunlight.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium sulfate (Impurity)	> 10000 mg/kg (Rat)	> 4 g/kg (Rabbit)	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation. Skin contact. Eye contact.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not classified.

11.2 Information on other hazards

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium sulfate (Impurity)	= 13500 mg/L LC50 Lepomis	No information available	= 630 mg/L EC50 Daphnia magna

	macrochirus 96 h 3040 - 4380 mg/L LC50 Lepomis macrochirus 96 h > 6800 mg/L LC50 Pimephales promelas 96 h 13500 - 14500 mg/L LC50 Pimephales promelas 96 h		96 h = 2564 mg/L EC50 Daphnia magna 48 h

12.2 Persistence and degradability

No product level data available.

12.3 Bioaccumulative potential

No product level data available.

12.4 Mobility

Mobility
Soluble in water.

Mobility in soil
No information available.

12.5 Other adverse effects

None known.

12.6 Other information.

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group
ADR/RID/ADN/ADG Packing group Not regulated

IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Maritime transport in bulk according to IMO instruments
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required
Group number	Not required

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

SDS no. PID10480
Version 5
Revision date 10-Sep-2019
Supersedes Date: 16-Mar-2016

Safety Data Sheet
ULTRADRIL*

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name ULTRADRIL*
Product code PID10480

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Water based system.

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
M-I Australia Pty Ltd
ABN: 67 009 214 162
Level 5
256 St. George Tce
Perth
WA 6000
T = +61 08 9440 2900
F = +61 08 9322 3080
+47 51577424

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 561 1600

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards

Skin corrosion/irritation	Category 2
Serious eye damage/eye irritation	Category 2

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
WARNING

Hazard Statements
H315 - Causes skin irritation
H319 - Causes serious eye irritation

Precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P332 + P313 - If skin irritation occurs: Get medical advice/attention
P337 + P313 - If eye irritation persists: Get medical advice/attention

Supplementary precautionary statements
P362 + P364 - Take off contaminated clothing and wash it before reuse
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Contains
Sodium Chloride

Barite

Calcium carbonate

Potassium Chloride

Crystalline silica (impurity)

Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%

Sodium Chloride	231-598-3	7647-14-5	30-60
Barite	236-664-5	13462-86-7	10-30
Calcium carbonate	207-439-9	471-34-1	5-10
Potassium Chloride	231-211-8	7447-40-7	1-5
Crystalline silica (impurity)	238-878-4	14808-60-7	<2
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	-	9046-10-0	1-<3

Comments
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. Because this product is a liquid, under normal and recommended use, exposure to Respirable Crystalline Silica will not apply.

The product contains other ingredients which do not contribute to the overall classification.

Drilling fluid is a highly complex and variable blend of several proprietary products. Each drilling fluid is designed to meet the drilling requirements of a specific well. During the drilling process the composition and physical properties of the drilling fluid are constantly changing; therefore, a complete disclosure of a particular fluid's composition is impractical.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures

Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply.
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection — Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Neoprene Nitrile
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection — In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Viscous
Odor	Mild
Color	Light brown
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	No information available	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. Because this product is a liquid, under normal and recommended use, exposure to Respirable Crystalline Silica will not apply.

Inhalation May cause irritation of respiratory tract.

Eye contact Causes serious eye irritation.

Skin contact Causes skin irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Sodium Chloride	= 3 g/kg (Rat)	> 10 g/kg (Rabbit)	> 42 g/m³ (Rat) 1 h
Barite	> 15000 mg/kg (Rat)	No data available	No data available
Calcium carbonate	= 6450 mg/kg (Rat)	No data available	No data available
Potassium Chloride	= 2600 mg/kg (Rat)	No data available	No data available
Crystalline silica (impurity)	No data available	No data available	No data available
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	2885 mg/kg (Rat) OECD 401	2979 mg/kg (Rabbit) OECD 402	> 0.74 mg/l (Rat) OECD 403

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Eye contact. Skin contact. Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Sodium Chloride	4747 - 7824 mg/L LC50 Oncorhynchus mykiss 96 h 6420 - 6700 mg/L LC50 Pimephales promelas 96 h = 7050 mg/L LC50 Pimephales promelas 96 h 6020 - 7070 mg/L LC50 Pimephales promelas 96 h = 12946 mg/L LC50 Lepomis macrochirus 96 h 5560 - 6080 mg/L LC50 Lepomis macrochirus 96 h	No information available	340.7 - 469.2 mg/L EC50 Daphnia magna 48 h = 1000 mg/L EC50 Daphnia magna 48 h
Barite	No information available	No information available	No information available
Calcium carbonate	No information available	No information available	No information available
Potassium Chloride	750 - 1020 mg/L LC50 Pimephales promelas 96 h = 1060 mg/L LC50 Lepomis macrochirus 96 h	= 2500 mg/L EC50 Desmodesmus subspicatus 72 h	= 83 mg/L EC50 Daphnia magna 48 h = 825 mg/L EC50 Daphnia magna 48 h
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	LC50 >700 mg/l 96h	EC50 >700 mg/l 72h	EC50 >1001 mg/l 48h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Barite	Inorganic compound
Calcium carbonate	Not Applicable - Inorganic chemical.
Crystalline silica (impurity)	Inorganic compound

Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not biodegradable

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Barite	Product/Substance is inorganic
Calcium carbonate	Product/Substance is inorganic
Crystalline silica (impurity)	Product/Substance is inorganic
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Does not bioaccumulate

12.4 Mobility

Mobility
Insoluble in water. See component information below.

Chemical Name	Mobility
Barite	Insoluble in water
Calcium carbonate	Insoluble in water
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Barite	Not expected to adsorb on soil
Calcium carbonate	Not expected to adsorb on soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Water-based muds containing mixtures of products listed in Chapters 17 and/or 18 of the IBC Code and the latest MEPC.2/Circular and is permitted to be carried under Annex II of MARPOL and resolution A.673 (16) Offshore Supply Vessel Code.
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Potassium Chloride
Schedule 4

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Does not comply
Philippines (PICCS)	Does not comply
Japan (ENCS)	Does not comply
China (IECSC)	Does not comply
Australia (AICS)	Complies
Korean (KECL)	Does not comply
New Zealand (NZIoC)	Does not comply

16. Other Information

Prepared by	Global Regulatory Compliance - Chemicals (GRC - Chemicals) , Anne Karin (Anka) Fosse
Supersedes Date:	16-Mar-2016
Revision date	10-Sep-2019
Version	5
This SDS has been revised in the following section(s)	All sections No changes with regard to classification have been made. Updated according to GHS/CLP.

Hazard Statements
H314 - Causes severe skin burns and eye damage

Precautionary statements
P260 - Do not breathe dust/fume/gas/mist/vapors/spray
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Supplementary precautionary statements
P264 - Wash face, hands and any exposed skin thoroughly after handling
P301 + P330 + P331 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P363 - Wash contaminated clothing before reuse

Contains
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Thermal decomposition can lead to release of toxic and corrosive gases/vapors

Australian statement of hazardous/dangerous nature

Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	-	9046-10-0	60-100

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation Move the exposed person to fresh air at once. If breathing is difficult, (trained personnel should) give oxygen. If not breathing, give artificial respiration. Seek medical attention at once.

Ingestion Do NOT induce vomiting. Rinse mouth. Never give anything by mouth to an unconscious person. Get immediate medical attention.

Skin contact Promptly wash contaminated skin with soap or mild detergent and water. Promptly remove clothing if soaked through and wash as above. Burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Chemical burns must be treated by a physician.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Seek medical attention at once.

4.2. Most important symptoms and effects, both acute and delayed

General advice Seek medical attention for all burns, regardless how minor they may seem. The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing agent suitable for type of surrounding fire.

Extinguishing media which must not be used for safety reasons
High volume water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Keep people away from and upwind of spill/leak. Do not get on skin or clothing. Wash thoroughly after handling. Avoid contact with eyes. Do not breathe vapors or spray mist. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Contain and collect spillage with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local/national regulations (see Section 13).

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Do not get in eyes, on skin or on clothing. Avoid spills and splashing during use. Do not breathe vapors or spray mist.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Strong acids
Storage class	Corrosive storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Contains no substances with occupational exposure limit values No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not determined	Not determined	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not determined	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not determined	Not determined	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not determined	Not determined	Not determined
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not determined	Not determined	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection Use eye protection according to EN 166, designed to protect against liquid splashes
Chemical splash goggles and/or face shield

Hand protection Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene Rubber
Break through time >480 minutes
Glove thickness >=0.4 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection In case of insufficient ventilation wear suitable respiratory equipment Respirator with a vapor filter (EN 141) Use respirator with organic vapor protection (A, brown) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	No information available
Odor	Ammoniacal
Color	Colorless
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	9.0 - 9.5	(Neat)
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	> 93 °C / > 200 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	0.993 - 1.023	
Bulk density	No information available	
Relative density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	80 - 120 cP	@ 24 °C
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Corrosive.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Not known.

10.4 Conditions to avoid

Keep away from open flames, hot surfaces and sources of ignition.

10.5 Incompatible materials

Strong acids.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Vapors may irritate throat and respiratory system. Inhaled corrosive substances can lead to a toxic edema of the lungs.

Eye contact Causes burns. May cause irreversible damage to eyes.

Skin contact Causes severe skin burns.

Ingestion Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	2885 mg/kg (Rat) OECD 401	2979 mg/kg (Rabbit) OECD 402	> 0.74 mg/l (Rat) OECD 403

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity	This product does not contain any known or suspected carcinogens.
Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of Exposure	Skin contact. Eye contact. Inhalation.
Routes of entry	Skin contact. Inhalation.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	LC50 >700 mg/l 96h	EC50 >700 mg/l 72h	EC50 >1001 mg/l 48h

12.2 Persistence and degradability

Product is not biodegradable. See component information below.

Chemical Name	Persistence and degradability
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not biodegradable

12.3 Bioaccumulative potential

Does not bioaccumulate. See component information below.

Chemical Name	Bioaccumulation
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Does not bioaccumulate

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

.

.

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG) UN2735
UN No. (IMDG/ANTAQ) UN2735
UN No. (ICAO/ANAC) UN2735

14.2. UN proper shipping name

AMINES, LIQUID, CORROSIVE, N.O.S. (contains Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups)

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	8
IMDG/ANTAQ Hazard class	8
ICAO/ANAC Hazard class/division	8

14.4 Packing group

ADR/RID/ADN/ADG Packing group	III
IMDG/ANTAQ Packing group	III
ICAO/ANAC Packing group	III

14.5 Environmental hazard
No

14.6 Special precautions

Hazard identification no (ADR)	80
EmS (IMDG)	F-A, S-B
Emergency Action Code (EAC)	2X
Tunnel restriction code	(E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

ADG Code – Australian Dangerous Goods Code

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies

SDS no. D188
Version 4
Revision date 29-Mar-2021
Supersedes Date: 23-Mar-2016

Safety Data Sheet
UltraLITE D188

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Product name UltraLITE D188
Product code D188

1.2 Relevant identified uses of the substance or mixture and uses advised against

Recommended Use Used as a cementing additive in oilfield applications

Uses advised against Consumer use

1.3 Details of the supplier of the safety data sheet

Supplier
Schlumberger Australia Pty Ltd
ABN: 74 002 459 225
ACN: 002 459 225
Level 5, 10 Telethon Avenue
Perth WA 6000

SDS@slb.com

1.4 Emergency Telephone Number

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518, Canada 001 613 996 6666

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

_

Contains
Silica, amorphous

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Silica, amorphous	231-545-4	7631-86-9	<=3

Comments
The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water. Get medical attention if irritation persists.

Eye Contact Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Sulphur oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8. Contaminated surfaces will be extremely slippery.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent further leakage or spillage if safe to do so.

Methods for cleaning up
Avoid dust formation. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation. Contaminated surfaces will be extremely slippery.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Avoid heat, flames and other sources of ignition. Protect from moisture

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits NUI = Nuisance dust, TWA 4mg/m³ Respirable Dust, 10mg/m³ Total Dust.

Component Information

Chemical Name	Arabic	Australia	Egypt
Silica, amorphous	Not determined	2mg/m³TWArespirable dust	Not determined
Chemical Name	**India**	**Indonesian**	**Japan**
Silica, amorphous	10 mg/m³ TWA	Not determined	Not determined
Chemical Name	**Kazakhstan**	**Kuwait**	**New Zealand**
Silica, amorphous	1 mg/m³ MAC 2 mg/m³ MAC	6.0 mg/m³ TWA	Not determined
Chemical Name	**Malaysia**	**Philippines**	**Russia**
Silica, amorphous	Not determined	Not determined	3 mg/m³ STEL 6 mg/m³ STEL 1 mg/m³ TWA 2 mg/m³ TWA Fibrogenic substance also vitreous, in the form of disintegration aerosol 1177 Fibrogenic substance in the form of condensation aerosol, containing >=10% Silicon dioxide 1175, 1176
Chemical Name	**Thailand**	**Vietnam**	**Turkey**
Silica, amorphous	Not determined	Not determined	Not determined

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against dusts Tightly fitting safety goggles Safety glasses with side-shields
Hand protection	Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Neoprene Nitrile Frequent change is advisable
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Half mask with a particle filter P2 (European Norm EN 143 = former DIN 3181) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.
Hygiene Measures	Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure	Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder
Odor	Odorless
Color	White

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	No information available	
Flammability	Not applicable	
Explosion limits:		
Upper explosion limit	No information available	
Lower explosion limit	No information available	
Vapor pressure	No information available	

Relative Vapor Density	No information available
Specific gravity	No information available
Bulk density	No information available
Water solubility	Insoluble in water
Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
Partition Coefficient (n-octanol/water)	No information available
Density and/or Relative Density	0.35 - 0.41 g/cm³
Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Avoid heat, flames and other sources of ignition. Protect from moisture.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.
Eye contact	Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Silica, amorphous	= 7900 mg/kg (Rat)	> 2000 mg/kg (Rabbit)	> 2.2 mg/L (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Skin contact. Eye contact. Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

11.2 Information on other hazards

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Silica, amorphous	= 5000 mg/L LC50 Brachydanio rerio 96 h	= 440 mg/L EC50 Pseudokirchneriella subcapitata 72 h	= 7600 mg/L EC50 Ceriodaphnia dubia 48 h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Silica, amorphous	Not Applicable - Inorganic chemical.

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Silica, amorphous	Not Applicable - Inorganic chemical.

12.4 Mobility

Mobility
The product is insoluble and floats on water.

Mobility in soil
No information available.

12.5 Other adverse effects

None known.

12.6 Other information.

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group
ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard

Marine pollutant
No

14.6 Special precautions
Not applicable

14.7 Maritime transport in bulk according to IMO instruments
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not applicable
Group number	Not applicable

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP) Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)

4.1 First aid measures

Inhalation	If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.
Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention immediately if symptoms occur.
Eye Contact	Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
High volume water jet.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Thermal decomposition can lead to release of toxic and corrosive gases/vapors Nitrogen oxides (NOx), Sulphur oxides.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. Contaminated surfaces will be extremely slippery. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use. If spilled, take caution, as material can cause surfaces to become very slippery.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions	Ensure adequate ventilation. Provide sufficient air exchange and/or exhaust in work rooms.
Storage precautions	Keep containers tightly closed in a dry, cool and well-ventilated place Store above freezing temperature Store away from incompatibles, Oxidizing agents
Storage class	Chemical storage.
Packaging materials	Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits	The product does not contain any hazardous materials with occupational exposure limits established.

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection	Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles
Hand protection	Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Butyl Neoprene Nitrile Break through time >480 minutes Glove thickness >0.4 mm Be aware that liquid may penetrate the gloves. Frequent change is advisable.
Respiratory protection	In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.
Skin and body protection	Wear appropriate personal protective clothing to prevent skin contact Eye wash and emergency shower must be available at the work place.

Hygiene Measures Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	Odorless
Color	White - Light yellow
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	7	@ 20 °C
pH @ dilution	10 g/l	
Melting / freezing point	0 °C / 32 °F	
Boiling point/range	100 °C / 212 °F	
Flash point	Not applicable	
Evaporation rate (BuAc =1)	Similar to water.	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	2.34 kPa	@ 20 °C
Vapor density	No information available	
Specific gravity	1.06 g/cm3	@ 20 °C
Bulk density	No information available	
Relative density	No information available	
Water solubility	Miscible with water.	
Solubility in other solvents	No information available	
Autoignition temperature	500 °C / 932 °F	
Decomposition temperature	260 °C / 500 °F	
Kinematic viscosity	No information available	
Dynamic viscosity	2000 - 4000 mPa s	
log Pow	No information available	

Explosive properties	No information available
Oxidizing properties	Not applicable

9.2 Other information

Pour point	-6°C / 21.2 °F
Molecular weight	No information available
VOC content(%)	None
Density	1.06 g/cm³ (20°C)

Comments

The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Do not freeze.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation	Inhalation of vapors in high concentration may cause irritation of respiratory system.
Eye contact	May cause slight irritation.
Skin contact	Prolonged contact may cause redness and irritation.
Ingestion	Ingestion may cause stomach discomfort.
Unknown acute toxicity	Not applicable.

Sensitization	This product does not contain any components suspected to be sensitizing.
Mutagenic effects	This product does not contain any known or suspected mutagens.
Carcinogenicity	This product does not contain any known or suspected carcinogens.

Reproductive toxicity	This product does not contain any known or suspected reproductive hazards.
Routes of exposure	Skin contact. Eye contact. Inhalation.

Routes of entry	No route of entry noted.
Specific target organ toxicity - Single exposure	Not classified
Specific target organ toxicity - Repeated exposure	Not classified.
Aspiration hazard	Not applicable.
Other information	Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

12.2 Persistence and degradability

Biodegradable.

12.3 Bioaccumulative potential

Does not bioaccumulate.

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems.

Mobility in soil
No information available.

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not applicable
Group number	Not applicable

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

Emergency telephone - (24 Hour) Australia +61 2801 44558, Asia Pacific +65 3158 1074, China +86 10 5100 3039, Europe +44 (0) 1235 239 670, Middle East and Africa +44 (0) 1235 239 671, New Zealand +64 9929 1483, USA 001 281 595 3518

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards

Substances/mixtures corrosive to metal	Category 1

2.2 Label elements

Signal word
WARNING

H290 - May be corrosive to metals

Precautionary statements
P234 - Keep only in original container
P390 - Absorb spillage to prevent material damage
P406 - Store in corrosion resistant container with a resistant inner liner

–

Contains
Phosphoric Acid

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Phosphoric Acid	231-633-2	7664-38-2	5-<10

Comments
Note B: Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and, therefore, these solutions require different classification and labelling since the hazards vary at different concentrations.

The product contains other ingredients which do not contribute to the overall classification.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Seek medical attention if irritation occurs.

Eye Contact Remove contact lenses, if worn. Promptly wash eyes with lots of water while lifting eye lids. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use water spray, fog, Carbon dioxide (CO_2), foam or dry chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Oxides of phosphorus.

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

Hazchem code ADG 2X

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing Do not eat, drink or smoke when using this product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from direct sunlight. Store at ambient conditions Protect from freezing Avoid excessive heat for prolonged periods of time. Store away from incompatibles, Strong oxidizing agents Aluminum Carbon steel

Storage class Corrosive storage.

Packaging materials High density polyethylene (HDPE) drum or can Plastic container

Packaging materials to be avoided Do not use carbon steel or aluminum tools or equipment.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Notes
No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against liquid splashes Tightly fitting safety goggles

Hand protection
Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training
Use protective gloves made of: Nitrile PVA PVC
Break through time >480 minutes
Glove thickness >=0.5 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection
When workers are facing concentrations above the exposure limit they must use appropriate certified respirators Respirator with combination filter for vapour/particulate (EN 141) Type A/P3. At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Eye wash and emergency shower must be available at the work place. Wear appropriate personal protective clothing to prevent skin contact

Hygiene Measures
Wash hands before breaks and immediately after handling the product Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Appearance	Aqueous solution
Odor	No information available
Color	Green
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	1.5 - 1.9	
pH @ dilution	Not applicable	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.106	@20 °C
Bulk density	No information available	
Relative density	1.106	@ 20°C.
Water solubility	Soluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Corrosive to Metals.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid excessive heat for prolonged periods of time. Keep away from direct sunlight. Store at ambient conditions. Protect from freezing.

10.5 Incompatible materials

Strong oxidizing agents. Carbon steel. Aluminium.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Inhalation Vapors may irritate throat and respiratory system.

Eye contact May cause slight irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Phosphoric Acid	= 1530 mg/kg (Rat)	= 2740 mg/kg (Rabbit)	> 850 mg/m³ (Rat) 1 h

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity This product does not contain any known or suspected carcinogens.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure None known.

Routes of entry None known.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. The product may affect the acidity (pH-factor) in water with risk of harmful effects to aquatic organisms.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Phosphoric Acid	3 - 3.5 mg/L LC50 Gambusia affinis 96 h	No information available	= 4.6 mg/L EC50 Daphnia magna 12 h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Phosphoric Acid	Readily biodegradable

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Phosphoric Acid	No bioaccumulation potential

12.4 Mobility

Mobility
The product is water soluble, and may spread in water systems.

Chemical Name	Mobility
Phosphoric Acid	Miscible in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Phosphoric Acid	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

UN/ID No. (ADR/RID/ADN/ADG)	UN1760
UN No. (IMDG/ANTAQ)	UN1760
UN No. (ICAO/ANAC)	UN1760

14.2. UN proper shipping name

CORROSIVE LIQUID, N.O.S. (contains Phosphoric Acid)

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	8
IMDG/ANTAQ Hazard class	8
ICAO/ANAC Hazard class/division	8

14.4 Packing group

ADR/RID/ADN/ADG Packing group	III
IMDG/ANTAQ Packing group	III
ICAO/ANAC Packing group	III

14.5 Environmental hazard

No

14.6 Special precautions

Hazard identification no (ADR)	80

EmS (IMDG)	F-A, S-B
Emergency Action Code (EAC)	2X
Tunnel restriction code	(E)
Hazchem code ADG	2X

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

Phosphoric Acid
Schedule 6
Schedule 5

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

P280 - Wear protective gloves and eye/face protection
P302 + P352 - IF ON SKIN: Wash with plenty of soap and water
P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P310 - Immediately call a POISON CENTER or doctor/physician
P332 + P313 - If skin irritation occurs: Get medical advice/attention

Supplementary precautionary statements
P362 + P364 - Take off contaminated clothing and wash it before reuse

Contains
Calcium carbonate

Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups

2-aminoethanol

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Not applicable

3.2 Mixtures

Chemical Name	EC No	CAS No	Weight-%
Calcium carbonate	207-439-9	471-34-1	10-30
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	-	9046-10-0	1-<3
2-aminoethanol	205-483-3	141-43-5	1-<3
Crystalline silica (impurity)	238-878-4	14808-60-7	<1

Comments
The product contains other ingredients which do not contribute to the overall classification.

This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. Because this product is a liquid, under normal and recommended use, exposure to Respirable Crystalline Silica will not apply.

Drilling fluid is a highly complex and variable blend of several proprietary products. Each drilling fluid is designed to meet the drilling requirements of a specific well. During the drilling process the composition and physical properties of the drilling fluid are constantly changing; therefore, a complete disclosure of a particular fluid's composition is impractical.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Seek medical attention if irritation occurs.

Skin contact — Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention if irritation persists.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice — The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation — Please see Section 11. Toxicological Information for further information.

Ingestion — Please see Section 11. Toxicological Information for further information.

Skin contact — Please see Section 11. Toxicological Information for further information.

Eye contact — Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician — Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing media appropriate for surrounding material.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards

None known.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Dike far ahead of liquid spill for later disposal.

Methods for cleaning up
Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Do not breathe vapors or spray mist. Avoid spills and splashing during use.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not smoke, eat or drink. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits Because this product is a liquid, the dust-related Workplace Exposure Limits for the components do not apply. No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide mechanical general and/or local exhaust ventilation to prevent release of vapor or mist into work environment.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against liquid splashes Safety glasses with side-shields Tightly fitting safety goggles

Hand protection — Wear chemically resistant gloves (tested to EN 374) in combination with 'basic' employee training Impervious gloves made of: Nitrile Neoprene
Break through time >480 minutes
Glove thickness >=0.5 mm
Be aware that liquid may penetrate the gloves. Frequent change is advisable.

Respiratory protection — In case of insufficient ventilation wear suitable respiratory equipment Respirator with combination filter for vapour/particulate (EN 141) Type A/P2 At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state — Liquid
Appearance — Viscous
Odor — Faint
Color — White - Brown

Property	Values	Remarks
pH	No information available	

pH @ dilution	No information available
Melting / freezing point	Not applicable
Boiling point/range	> 100 °C / > 212 °F
Flash point	> 100 °C / > 212 °F
Evaporation rate (BuAc =1)	No information available
Flammability	Not applicable
Explosion limits:	
Upper explosion limit	No information available
Lower explosion limit	No information available
Vapor pressure	No information available
Relative Vapor Density	No information available
Specific gravity	1.0 - 2.3
Bulk density	No information available
Water solubility	Miscible with water.
Solubility in other solvents	No information available
Autoignition temperature	No information available
Decomposition temperature	No information available
Kinematic viscosity	No information available
Dynamic viscosity	No information available
Partition Coefficient (n-octanol/water)	No information available
Density and/or Relative Density	No information available
Explosive properties	Not applicable
Oxidizing properties	No information available

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

None known.

10.5 Incompatible materials

No materials to be especially mentioned.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. Because this product is a liquid, under normal and recommended use, exposure to Respirable Crystalline Silica will not apply.

Inhalation Inhalation of vapors in high concentration may cause irritation of respiratory system.

Eye contact Causes serious eye damage.

Skin contact Causes skin irritation. Components of the product may be absorbed into the body through the skin.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Calcium carbonate	= 6450 mg/kg (Rat)	No data available	No data available
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	2885 mg/kg (Rat) OECD 401	2979 mg/kg (Rabbit) OECD 402	> 0.74 mg/l (Rat) OECD 403
2-aminoethanol	= 1720 mg/kg (Rat)	= 1000 mg/kg (Rabbit) = 1 mL/kg (Rabbit)	> 1.3 mg/l Vapour 6h (Rat)
Crystalline silica (impurity)	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Skin contact. Eye contact.

Routes of entry Skin contact. Eye contact.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

11.2 Information on other hazards

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
See component information below.

Toxicity to fish
See component information below.

Toxicity to daphnia and other aquatic invertebrates
See component information below.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Calcium carbonate	No information available	No information available	No information available
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	LC50 >700 mg/l 96h	EC50 >700 mg/l 72h	EC50 >1001 mg/l 48h

12.2 Persistence and degradability

See component information below.

Chemical Name	Persistence and degradability
Calcium carbonate	Not Applicable - Inorganic chemical.
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Not biodegradable
2-aminoethanol	Readily biodegradable
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

See component information below.

Chemical Name	Bioaccumulation
Calcium carbonate	Product/Substance is inorganic
Reaction products of propane-1,2-diol, propoxylated by amination of the terminal hydroxyl groups	Does not bioaccumulate
2-aminoethanol	Does not bioaccumulate log Kow -1.91
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
The product is miscible with water. May spread in water systems. See component information below.

Chemical Name	Mobility
Calcium carbonate	Insoluble in water
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Calcium carbonate	Not expected to adsorb on soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Other adverse effects

None known.

12.6 Other information.

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products Dispose of in accordance with local regulations.

Contaminated packaging Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)
ADR/RID/ADN/ADG Hazard class Not regulated
IMDG/ANTAQ Hazard class Not regulated
ICAO/ANAC Hazard class/division Not regulated

14.4 Packing group
ADR/RID/ADN/ADG Packing group Not regulated
IMDG/ANTAQ Packing group Not regulated
ICAO/ANAC Packing group Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Maritime transport in bulk according to IMO instruments
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons

2-aminoethanol
Schedule 4
Schedule 6
Schedule 5

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Does not comply
Philippines (PICCS)	Does not comply
Japan (ENCS)	Does not comply
China (IECSC)	Does not comply
Australia (AICS)	Complies
Korean (KECL)	Does not comply
New Zealand (NZIoC)	Does not comply

2. Hazards Identification

2.1 Classification of the substance or mixture

GHS Classification

Health hazards Not classified

Environmental hazards Not classified

Physical Hazards Not classified

2.2 Label elements

Signal word
None

Hazard Statements
This product is not classified as hazardous therefore no (H) hazard statements assigned.

Precautionary statements
This product is not classified as hazardous therefore has no (P) precautionary statements assigned.

-

Contains
Polysaccharide

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria
Combustible dust

Australian statement of hazardous/dangerous nature
Classified as Non-Hazardous according to the criteria of NOHSC.
NON-HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Cellulose	Listed	Proprietary	60-100
Crystalline silica (impurity)	238-878-4	14808-60-7	<1

3.2 Mixtures

Not applicable

Comments
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

4. First Aid Measures

4.1 First aid measures

Inhalation — If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion — Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.

Skin contact — Wash skin thoroughly with soap and water. Get medical attention if symptoms occur.

Eye Contact — Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.

Symptoms

Inhalation Please see Section 11. Toxicological Information for further information.

Ingestion Please see Section 11. Toxicological Information for further information.

Skin contact Please see Section 11. Toxicological Information for further information.

Eye contact Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water Fog, Alcohol Foam, CO_2, Dry Chemical.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
Dust may form explosive mixture in air.

Hazardous combustion products
Thermal decomposition can lead to release of irritating gases and vapors

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Extinguish all ignition sources. Avoid sparks, flames, heat and smoking. Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Sweep up and shovel into suitable containers for disposal. Avoid dust formation. Take precautionary measures against static discharges. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid dust formation.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. When using do not eat, drink, smoke, sniff Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Take precautionary measures against static discharges. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Keep away from open flames, hot surfaces and sources of ignition Avoid contact with: Oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Mechanical ventilation or local exhaust ventilation is required.

Personal protective equipment

Eye protection — Use eye protection according to EN 166, designed to protect against powders and dusts Safety glasses with side-shields Tightly fitting safety goggles

Hand protection — Wear gloves according to EN 374 to protect against skin effects from powders Use protective gloves made of: Neoprene Nitrile Frequent change is advisable

Respiratory protection — No protective equipment is needed under normal use conditions In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection — Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures — Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure — Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state — Solid
Appearance — No information available
Odor — Odorless
Color — Light brown
Odor threshold — Not applicable

Property	Values	Remarks
pH	No information available	
pH @ dilution	No information available	
Melting / freezing point	No information available	
Boiling point/range	No information available	
Flash point	193 °C / 380 °F	PMCC
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	1.1 - 1.4	@ 20 °C
Bulk density	577-641 kg/m³/36-40 lb/ft3	
Relative density	No information available	
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	Not applicable	
Dynamic viscosity	No information available	
log Pow	Not determined	

Explosive properties Suspended dust may present a dust explosion hazard
Oxidizing properties None known.

9.2 Other information

Pour point No information available
Molecular weight No information available
VOC content(%) None
Density No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

Dust may form explosive mixture in air.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Keep away from open flames, hot surfaces and sources of ignition. Take precautionary measures against static charges.

10.5 Incompatible materials

Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Prolonged contact may cause redness and irritation.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Polysaccharide	> 5 g/kg (Rat)	> 2 g/kg (Rabbit)	> 5800 mg/m³ (Rat) 4 h
Crystalline silica (impurity)	= 500 mg/kg (Rat)	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity This product does not contain any known or suspected reproductive hazards.

Routes of Exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment.

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Polysaccharide	No information available	No information available	No information available
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

Chemical Name	Persistence and degradability
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

Chemical Name	Bioaccumulation
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
Insoluble in water.

Chemical Name	Mobility
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
See component information below.

Chemical Name	Mobility in soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information
Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number
Not regulated

14.2. UN proper shipping name
The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard
No

14.6 Special precautions
Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code
Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

New Zealand Hazard Classification	Not classified
HSNO approval no.	Not required
Group number	Not required

National Code of Practice for the Preparation of Material Safety Data Sheets 2nd Edition [NOHSC: 2011 (2003)].

National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008 (2004) 3rd Edition].

National Occupational Health and Safety Commission's Exposure Standards for Atmospheric Contaminants in the occupational Environment [NOHSC:1003 (1995)].

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

International inventories

USA (TSCA)	Complies
Canada (DSL)	Complies
Philippines (PICCS)	Complies
Japan (ENCS)	Complies
China (IECSC)	Complies
Australia (AICS)	Complies
Korean (KECL)	Complies
New Zealand (NZIoC)	Complies

Signal word
WARNING

Hazard Statements
H361 - Suspected of damaging fertility or the unborn child

Precautionary statements
P201 - Obtain special instructions before use
P202 - Do not handle until all safety precautions have been read and understood
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P308 + P313 - IF exposed or concerned: Get medical advice/attention
P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

-

Contains
Trimanganese tetradioxide

Crystalline silica (impurity)

2.3 Other hazards

Not classified as PBT/vPvB by current EU criteria

Australian statement of hazardous/dangerous nature
Classified as Hazardous according to the criteria of NOHSC.
HAZARDOUS SUBSTANCE. NON-DANGEROUS GOODS.

3. Composition/information on Ingredients

3.1 Substances

Chemical Name	EC No	CAS No	Weight-%
Trimanganese tetradioxide	215-266-5	1317-35-7	60-100
Crystalline silica (impurity)	238-878-4	14808-60-7	1-<3

3.2 Mixtures

Not applicable

Comments
This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis. IARC Monographs, Vol. 68, 1997, concludes that there is sufficient evidence that inhaled crystalline silica in the form of quartz or cristobalite from occupational sources causes cancer in humans. IARC Classification Group I.

4. First Aid Measures

4.1 First aid measures

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Ingestion	Rinse mouth. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person. Get medical attention if symptoms occur.
Skin contact	Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Get medical attention if irritation persists.
Eye Contact	Promptly wash eyes with lots of water while lifting eye lids. Remove contact lenses, if worn. Continue to rinse for at least 15 minutes. Get medical attention if any discomfort continues.

4.2. Most important symptoms and effects, both acute and delayed

General advice	The severity of the symptoms described will vary dependant of the concentration and the length of exposure. If adverse symptoms develop, the casualty should be transferred to hospital as soon as possible.
Symptoms	
Inhalation	Please see Section 11. Toxicological Information for further information.
Ingestion	Please see Section 11. Toxicological Information for further information.
Skin contact	Please see Section 11. Toxicological Information for further information.
Eye contact	Please see Section 11. Toxicological Information for further information.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to physician Treat symptomatically.

5. Fire-Fighting Measures

5.1 Extinguishing media

Suitable extinguishing media
Water spray, dry chemical, carbon dioxide (CO_2), or foam.

Extinguishing media which must not be used for safety reasons
None known.

5.2. Special hazards arising from the substance or mixture

Unusual fire and explosion hazards
None known.

Hazardous combustion products
Fire or high temperatures create: Carbon oxides (COx).

5.3 Advice for firefighters

Special protective equipment for fire-fighters
As in any fire, wear self-contained breathing apparatus and full protective gear.

Special Fire-Fighting Procedures
Containers close to fire should be removed immediately or cooled with water.

6. Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. See also section 8.

6.2 Environmental precautions

The product should not be allowed to enter drains, water courses or the soil.

Environmental exposure controls
Avoid release to the environment. Local authorities should be advised if significant spillages cannot be contained.

6.3 Methods and material for containment and cleaning up

Methods for containment
Prevent further leakage or spillage if safe to do so. Cover powder spill with plastic sheet or tarp to minimize spreading.

Methods for cleaning up
Avoid generating or breathing dust. Sweep up and shovel into suitable containers for disposal. After cleaning, flush away traces with water.

6.4 Reference to other sections

See section 13 for more information.

7. Handling and Storage

7.1 Precautions for safe handling

Handling
Handle in accordance with good industrial hygiene and safety practice. Avoid contact with skin and eyes. Avoid handling causing generation of dust. Not to be used by pregnant workers and workers who have recently given birth or who are breastfeeding.

Hygiene Measures
Use good work and personal hygiene practices to avoid exposure. Wash hands and face before breaks and immediately after handling the product Remove contaminated clothing Do not eat, drink or smoke when using this product

7.2 Conditions for safe storage, including any incompatibilities

Technical measures/precautions Ensure adequate ventilation. Provide appropriate exhaust ventilation at places where dust is formed. Keep airborne concentrations below exposure limits.

Storage precautions Keep containers tightly closed in a dry, cool and well-ventilated place Protect from moisture Avoid contact with: Acids Oxidizing agents

Storage class Chemical storage.

Packaging materials Use specially constructed containers only.

8. Exposure Controls/Personal Protection

8.1 Control parameters

Exposure limits No biological limit allocated

Component Information

Chemical Name	Arabic	Australia	Egypt
Trimanganese tetradioxide	Not determined	1mg/m³TWA	Not determined

8.2 Exposure controls

All chemical Personal Protective Equipment (PPE) should be selected based on an assessment of both the chemical hazard present and the risk of exposure to those hazards. The PPE recommendations below are based on an assessment of the chemical hazards associated with this product. Where this product is used in a mixture with other products or fluids, additional hazards may be created and as such further assessment of risk may be required. The risk of exposure and need of respiratory protection will vary from workplace to workplace and should be assessed by the user in each situation.

Engineering Controls
Ensure adequate ventilation Provide appropriate exhaust ventilation at places where dust is formed Keep airborne concentrations below exposure limits

Personal protective equipment

Eye protection
Use eye protection according to EN 166, designed to protect against powders and dusts
Tightly fitting safety goggles Safety glasses with side-shields

Hand protection
Wear gloves according to EN 374 to protect against skin effects from powders
Impervious gloves made of: Neoprene Nitrile PVC
Frequent change is advisable

Respiratory protection
In case of insufficient ventilation wear suitable respiratory equipment Suitable mask with particle filter P3 (European Norm 143) At work in confined or poorly ventilated spaces, respiratory protection with air supply must be used.

Skin and body protection
Wear suitable protective clothing Eye wash and emergency shower must be available at the work place.

Hygiene Measures
Wash hands before eating, drinking or smoking Remove and wash contaminated clothing before re-use

8.2.3 Environmental exposure controls

Environmental exposure
Use appropriate containment to avoid environmental contamination See section 6 for more information

9. Physical and Chemical Properties

9.1 Information on basic physical and chemical properties

Physical state	Solid
Appearance	Powder
Odor	Odorless
Color	Red brown
Odor threshold	Not applicable

Property	**Values**	**Remarks**
pH	No information available	
pH @ dilution	7-10	5g/50ml H2O
Melting / freezing point	1550-1650° C / 2822-3002° F	
Boiling point/range	No information available	
Flash point	No information available	
Evaporation rate (BuAc =1)	No information available	
Flammability (solid, gas)	Not applicable	
Flammability Limit in Air		
Upper flammability limit	Not applicable	
Lower flammability limit	Not applicable	
Vapor pressure	No information available	
Vapor density	No information available	
Specific gravity	4.7 - 4.9 g/cm^3	
Bulk density	No information available	
Relative density	0.97-1.01 kg/cm3	@ 20°C.
Water solubility	Insoluble in water	
Solubility in other solvents	No information available	
Autoignition temperature	No information available	
Decomposition temperature	No information available	
Kinematic viscosity	No information available	
Dynamic viscosity	No information available	
log Pow	No information available	

Explosive properties	Not applicable
Oxidizing properties	None known.

9.2 Other information

Pour point	No information available
Molecular weight	No information available
VOC content(%)	None
Density	No information available

Comments
The data listed above are typical physical and chemical properties and should not be construed as product specification.

10. Stability and Reactivity

10.1 Reactivity

No specific reactivity hazards associated with this product.

10.2 Chemical stability

Stable under normal temperature conditions and recommended use.

10.3 Possibility of Hazardous Reactions

Hazardous polymerization
Hazardous polymerization does not occur.

10.4 Conditions to avoid

Avoid dust formation. Protect from moisture.

10.5 Incompatible materials

Acids. Oxidizing agents.

10.6 Hazardous decomposition products

See Section 5.2.

11. Toxicological Information

11.1 Information on toxicological effects

Acute toxicity

Product information This product contains a small quantity of quartz, crystalline silica. Prolonged and repeated exposure to concentrations of crystalline silica exceeding the workplace exposure limit (WEL) may lead to chronic lung disease such as silicosis.

Inhalation Inhalation of dust in high concentration may cause irritation of respiratory system.

Eye contact Dust may cause mechanical irritation.

Skin contact Repeated exposure may cause skin dryness or cracking.

Ingestion Ingestion may cause stomach discomfort.

Unknown acute toxicity Not applicable.

Toxicology data for the components

Chemical Name	LD50 Oral	LD50 Dermal	LC50 Inhalation
Trimanganese tetradioxide	No data available	No data available	No data available
Crystalline silica (impurity)	No data available	No data available	No data available

Sensitization This product does not contain any components suspected to be sensitizing.

Mutagenic effects This product does not contain any known or suspected mutagens.

Carcinogenicity Crystalline silica dust is listed by IARC in Group 1 as known to cause lung cancer in humans, if inhaled.

Reproductive toxicity Suspected of damaging fertility or the unborn child.

Routes of Exposure Inhalation.

Routes of entry Inhalation.

Specific target organ toxicity - Single exposure Not classified

Specific target organ toxicity - Repeated exposure Not classified.

Aspiration hazard Not applicable.

Other information Key literature references and sources for data. See Section 16 for more information.

12. Ecological Information

12.1 Toxicity

The product component(s) are not classified as environmentally hazardous. However, this does not exclude the possibility that large or frequent spills can have a harmful or damaging effect on the environment. Large amounts will affect pH and harm aquatic organisms

Toxicity to algae
This product is not considered toxic to algae.

Toxicity to fish
This product is not considered toxic to fish.

Toxicity to daphnia and other aquatic invertebrates
This product is not considered toxic to invertebrates.

Toxicology data for the components

Chemical Name	Toxicity to fish	Toxicity to algae	Toxicity to daphnia and other aquatic invertebrates
Trimanganese tetradioxide	No information available	No information available	No information available
Crystalline silica (impurity)	LC50 Danio rerio (zebra fish) : > 10000 mg/l 96h	EC50: > 1000 mg/l 72h	LC50 Daphnia manga (Water flea): > 10000 mg/l 24h

12.2 Persistence and degradability

Not Applicable - Inorganic chemical.

Chemical Name	Persistence and degradability
Crystalline silica (impurity)	Inorganic compound

12.3 Bioaccumulative potential

Not Applicable - Inorganic chemical.

Chemical Name	Bioaccumulation
Crystalline silica (impurity)	Product/Substance is inorganic

12.4 Mobility

Mobility
Insoluble in water.

Chemical Name	Mobility
Crystalline silica (impurity)	Insoluble in water

Mobility in soil
No information available.

Chemical Name	Mobility in soil
Crystalline silica (impurity)	Not expected to adsorb on soil

12.5 Results of PBT and vPvB assessment

Not classified as PBT/vPvB by current EU criteria.

12.6 Other adverse effects.

None known.

12.7 Other information

Key literature references and sources for data. See Section 16 for more information.

13. Disposal considerations

13.1 Waste treatment methods

Waste from residues/unused products	Dispose of in accordance with local regulations.
Contaminated packaging	Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport information

14.1. UN number

Not regulated

14.2. UN proper shipping name

The product is not covered by international regulation on the transport of dangerous goods

14.3 Hazard class(es)

ADR/RID/ADN/ADG Hazard class	Not regulated
IMDG/ANTAQ Hazard class	Not regulated
ICAO/ANAC Hazard class/division	Not regulated

14.4 Packing group

ADR/RID/ADN/ADG Packing group	Not regulated
IMDG/ANTAQ Packing group	Not regulated
ICAO/ANAC Packing group	Not regulated

14.5 Environmental hazard

No

Marine pollutant

No

14.6 Special precautions

Not applicable

14.7 Transport in bulk according to Annex I/II of MARPOL 73/78 and the IBC Code

Please contact SDS@slb.com for info regarding transport in Bulk.

15. Regulatory Information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

This safety data sheet complies with the requirements of:
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

Australian Standard for the Uniform Scheduling of Drugs and Poisons
No poisons schedule number allocated

Safe Work Australia.

Standard for the Uniform Scheduling of Drugs and Poisons (SUSDP).

Not classified as dangerous goods in accordance with the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG)

Occupational Safety and Health (Classification, Labelling and Safety Data Sheet of Hazardous Chemicals) Regulations 2013 [P.U.(A) 310/2013] (CLASS Regulations)
The Industry Code of Practice on Chemical Classification and Hazard Communication 2014 [P.U. (B) 128/2014] (ICOP)

Figures

Figure 2-1: Regional Top Laurel Time Structure Map over EP 371 illustrating the deeper basin depocenter related to the underlying Fitzroy Trough to the southwest along with some of the established faulting within the DoL 6

Figure 2-2: A 2D seismic line in two-way time along the northern edge of the Fitzroy Trough showing the Anderson (Green) and Upper Laurel Formation (Yellow and Blue) benches down stepping into the basin. Some expansion of the Laurel and Anderson Formation sequence is shown. An extensive database of 2D seismic was used to map in three dimensions the structural style of the basin margin. Location of this 33 km long line is shown in Figure 23. 7

Figure 2-3: The 341 surfaces just above the Upper Laurel Carbonate is shown highlighting a number of downthrown normal faults stepping into the basin. The DoL is marked with the box. The location of the seismic line from Figure 2-2 is also marked 8

Figure 2-4: SH_{max} for three wells within the northern portion of the Canning Basin along with the world stress map. SH_{max} is north-east to south-west, and is consistent across this part of the Fitzroy Trough 9

Figure 2-5: Well prognosis methodology 10

Figure 2-6: Example workflow for considering the zones to be tested for the HFS 10

Figure 2-7: Example of data that is considered for a risk analysis for any HFS as it relates to the relationships between the HFS and aquifers 11

Figure 3-1: Relationships of the Laurel Formation to the overlying Grant and Reeves formations 13

Figure 3-2: Valhalla North1 – 2D Seismic section showing the detail of the Upper Laurel Formation and faults as well as the relationship to the overlying Anderson, Reeves and Grant Group formations. The base of the Reeves Formation is noted as not a consistent reflector 14

Figure 3-3: Valhalla North 1 stratigraphic section highlighting the Anderson Formation shale seal between the hydrocarbon bearing zones of the Anderson and Laurel Formations, and the Grant / Reeves sections above along with proposed hydraulic stimulation zones. Actual zones for the stimulations were deeper than the shallowest ones illustrated here 15

Figure 3-4: Composite well log for Valhalla North 1 showing the shale seal and the top of the gas section 15

Figure 3-5: Asgard 1 stratigraphic section noting the deepest aquifer and the underlying siltstones of the Reeves and Anderson Formation shales and hydrocarbon zones within the Laurel Formation 16

Figure 3-6: Asgard 1 composite well log showing the top of gas in relationship to the upper Anderson and Reeves Formations 17

Figure 3-7: Asgard 1 geomechanical log from Haliburton as well as notes from Schlumberger 17

Figure 4-1: Hydrogeological cross section of the Valhalla and Asgard areas 19

4D	Four dimensional

1 Summary

This document provides a Geotechnical Risk Analysis for the Bennett Resources Pty Ltd's (BNR) Valhalla Gas Exploration and Appraisal Program (the Proposal) – as required by the Environmental Scoping Document Item 12.

Geotechnical risk assessments are not a single one-off activity. They utilise data acquired from successive petroleum activities to provide a more detailed and comprehensive understanding of the subsurface geology. As they progress, they inform future field design, well design and subsequent mitigations to enable risks are continually reduced to as low as reasonably practicable. One such mitigation that has been implemented is an 'early warning' mechanism that allows a proactive adaptive management approach to be followed in the field during hydraulic fracture stimulation (HFS) activities. This is detailed in Annex A.

As an overview, a geotechnical risk analysis is completed via the following phases:

- **Definition of structural context**: this is where existing data sources are analysed to provide an understanding of the subsurface geology. Specifically, the data sources are "stitched" together to form a picture of the area between data sources
- **Identification of hydrologically active faults**: the subsurface geology data is reviewed and interrogated with other desktop sources to identified if / where any active faults could occur within the field of interest
- **Assessment of well seal effectiveness**: once there is a good handle on the subsurface geology, each of the formations can be reviewed to understand if they provide a suitable geological seal between useable aquifers and targeted formations
- **Definition of potential high-risk zones**: once the subsurface geology and known faults have been understood after review of existing drilling data and new seismic data, specific fault zones or other weak areas will be reviewed or identified.

Based upon the process detailed above, the data for a comprehensive risk analysis is only considered preliminary given data from the wells as they are drilled will be utilised to update the subsurface geological understanding. The data gathered by historical activities are sufficient, when coupled with current regional work, to allow for a generalised risk analysis to be completed. The outcome of this geotechnical risk analysis is consistent with the outcomes of the most recent geotechnical risk evaluation (Buru Energy 2013) conducted by the previous operator of the exploration permit EP 371, Buru Energy. This evaluation concluded the following points:

- "in the Valhalla area, >600 m lies between the deepest recognised aquifer and the shallowest proposed hydraulic stimulation zones" (Buru Energy 2013) that were envisioned at the time. The actual interval between the highest stimulation and potential aquifer was 1,213 m
- in the Asgard area, there was initially planned to be a few hundred meters between the deepest recognised aquifer and the shallowest hydraulic stimulation zones; the actual interval between the stimulations and potential aquifer was 1192 m
- in the northern Canning Basin, "although there is evidence for some hydrocarbons that have naturally migrated into the shallower aquifers over ~200 million years, the very low/lack of hydrocarbon saturations in the Upper Anderson, Reeves, Lower Grant and Mesozoic formations above the Laurel Basin-Centered Gas System demonstrate that hydrocarbons cannot migrate vertically through these rocks" (Buru Energy 2013)
- some faults and fractures have been identified from seismic data and borehole image analysis within the section of interest for hydraulic stimulation. However, all faults identified are closed and strike in a direction that is approximately orthogonal to the maximum horizontal stress (SH_{max}) such that although they may negatively impact upon fracture propagation, they pose no geomechanical hazard for upward propagation of fracturing fluids or hydrocarbons into the recognised aquifers as the activation energy required to dilate faults or fractures in tension will be higher than overburden, which means the fracture growth would rotate to horizontal before opening such faults in tension.

2 Definition of the structural context

BNR has reviewed all the currently available engineering and geoscientific data on EP 371. The review was focused on existing well logs and 2D seismic data using a standard unconventional and petroleum systems workflow. This work built upon the substantial foundation of work and research done by the Western Australian government, and previous permit operators Buru Energy and Mitsubishi Australia. A key document relating to past exploration and engineering results for the unconventional resources on the permit is the EP-371 Discovery Assessment Report Asgard-1 and Valhalla North-1 (Buru Energy 2016). The information contained in the Buru Energy discovery assessment report (2016) and associated documents submitted by Buru Energy are referred to here but not repeated in this document. The EP 371 Discovery Assessment Report notes the key geological and engineering data acquired up through September 2016 which defines the basin-centred gas accumulation and the expected unconventional tight wet gas pool within the permit and Declaration of Location (DoL – refer to Figure 2-3). Two key wells (Asgard 1 and Valhalla North 1) have been drilled, stimulated, and flowed back to demonstrate that wet gas and condensate are present within the permit. Asgard 1 and Valhalla North 1 were located 40 km apart and were truly exploratory as they were drilled outside of any structure.

Leveraging the past efforts of Buru Energy, BNR has progressed in its understanding of the underlying geology and reservoir characteristics. Reviews by BNR continue to be conducted on the existing data. This work includes developing a better understanding of the existing geological formations and the overlying section. It is our intent to advance our understanding with new additional data and interpretations will need to be re-undertaken as additional tests are run on existing wells, new exploration and appraisal wells are drilled, and future seismic data is acquired and brought in-house.

To understand the structural context, the entire geological setting of the Canning Basin has been studied.

2.1 Canning Basin

The Canning Basin is a geologically old basin with Ordovician sedimentary rocks deposited onto Precambrian basement. The Fitzroy Trough is a structural feature on the northern edge of the basin that extends to a depth of up to 18 km (Cadman, et al. 1993). Significant infilling of the basin took place from Carboniferous to Permian and in the Cretaceous, during which period the basin was a shallow seaway. Thick sections of Permian (Grant Group) and Carboniferous terrigenous clastics (Reeves, Anderson, and Laurel Formations) then prograded over some additional deeper petroleum prone targets. Multiple tectonic phases within the basin took place both syndepositionally and post-depositionally, modifying the petroleum systems with an extensive set of both transpressional and extensional fault systems (Zhan and Mory 2013), as seen in Figure 2-1. Tertiary and Triassic sections are notably absent in the basin.

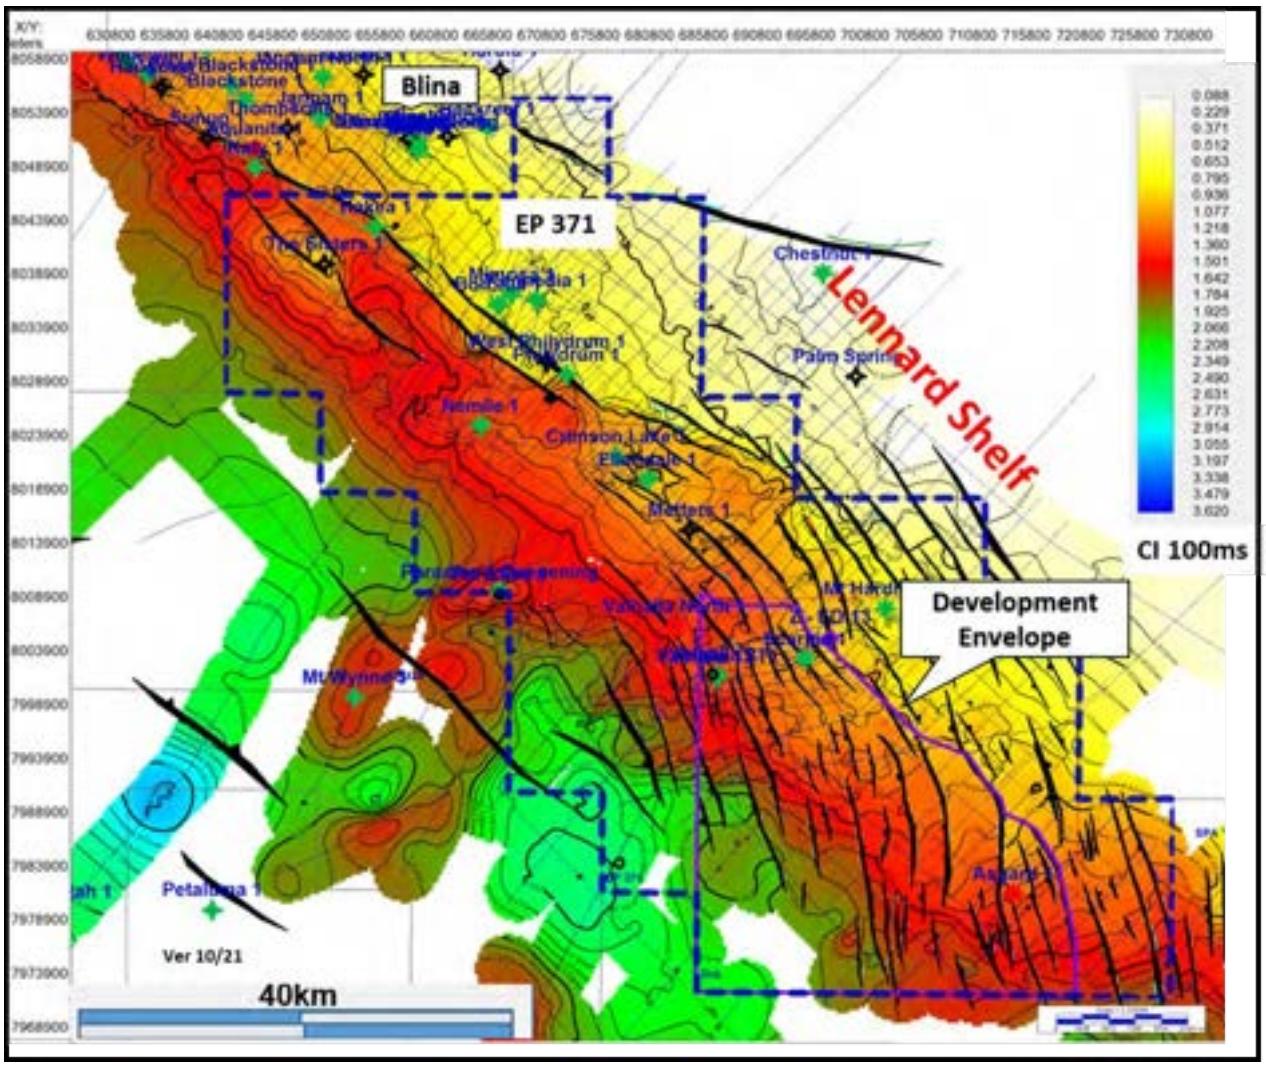

Figure 2-1: Regional Top Laurel Time Structure Map over EP 371 illustrating the deeper basin depocenter related to the underlying Fitzroy Trough to the southwest along with some of the established faulting within the DoL

2.2 Geological summary of the Laurel Formation and above geological section within EP 371

A review of the geochemical, petrophysical and existing 2D seismic data establishes an extensive basin-centred gas fairway beginning at 2,000 m and continuing to over 4,500 m in depth which is significantly deeper than any take points in the aquifer for water wells. This fairway steps down from the basin margins (Figure 2-1) into the depths of the Fitzroy Trough and is analogous and correlative to a similar petroleum system that hosts gas discoveries on the opposite margin of the trough (Yulleroo-2, a 3 stage frac that produced up to 1.5 mmscf/d).

The seismic data demonstrate a steep deepening of the Laurel Formation section into the basin with numerous normal downthrown faults parallel to the shelf margin that typically have throws (vertical component of the separation) of over 100 m (Figure 2-2 and Figure 2-3). Complex structuring that occurred during the basin's extensional phases controlled and influenced the carbonate sequences. The Permian Carboniferous Meda transpressional (strike slip and compressional structuring) event followed by the later Fitzroy Transpression in the Triassic-Jurassic caused reactivation and inversion on several the basement faults. Within the area of interest is located the Meda unconformity between the Reeves and Anderson Formations with an additional unconformity between the Reeves and overlying Grant Group formations.

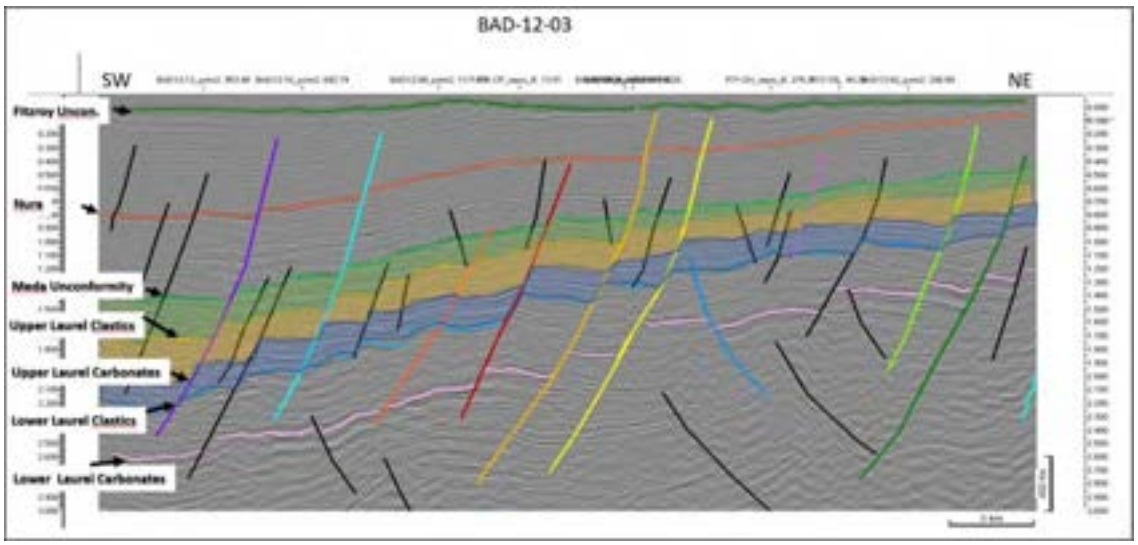

Figure 2-2: A 2D seismic line in two-way time along the northern edge of the Fitzroy Trough showing the Anderson (Green) and Upper Laurel Formation (Yellow and Blue) benches down stepping into the basin. Some expansion of the Laurel and Anderson Formation sequence is shown. An extensive database of 2D seismic was used to map in three dimensions the structural style of the basin margin. Location of this 33 km long line is shown in Figure 23.

The Grant is the deepest know aquifer in this part of the basin; the Betty Unit is in the lowermost part of the Grant Formation. The base of the Grant to uppermost Reeves is often difficult to recognize on 2D seismic. New 2D data and a potential 3D seismic program should better define the shallow sections.

2.3 Structure of the Laurel Formation and shallower section within the DoL of EP371

The structural evolution of the section of interest in this study is tied to the deformation within the Fitzroy Trough. The Fitzroy Trough has several major transtensional (strike slip and extensional structuring) and transpressional faults within it that may have strike slip offsets more than several kilometres. Within the trough are several large-scale synclines and anticlines, some with surface expression (St. George Ranges). Faults imaged within the trough downdip of EP 371 on 2D seismic data can be interpreted as exhibiting complex flower structures.

A series of normal and strike slip faults down to the southwest is noted across the DoL that have had movement up through Noonkanbah (Permian) time (Figure 2-2) which is marked as the Fitzroy Unconformity. Some normal faults have potentially more than one episode of movement as evidence by changes in dip regarding depth. There are also some antithetic faults noted into the larger master faults. Overall faults change their orientation from north-west to south-east to a more north-south strike orientation within the southern portion of the DoL (Figure 2-3). The fault orientation for most faults is 90 degrees off of the north-east / south-west oriented SH_{max} orientation which should reduce the risk of fault slippage during HFS. Further review of fault slip tendances can be conducted when additional 2D and or 3D seismic data are acquired.

Typical fault blocks are 4-6 km in breath and often 5-10 km in length based on the current 2D data. The Laurel Formation steps down as a series of terraces into the trough along these faults. Current 2D data allows BNR to tie together major faults between seismic lines but there are several faults that are less substantial that are difficult to correlate out beyond a one- or two-line interpretation. It is important to note the lack of faults on the map in the south-western corner of the DoL does not indicate that no faults are present, BNR does not have any data currently there to map the faults. BNR will continue to map the subsurface geology in accordance with EP 371 permit conditions. Specifically, future seismic program data will highlight fault blocks that are smaller in nature and potentially more complex.

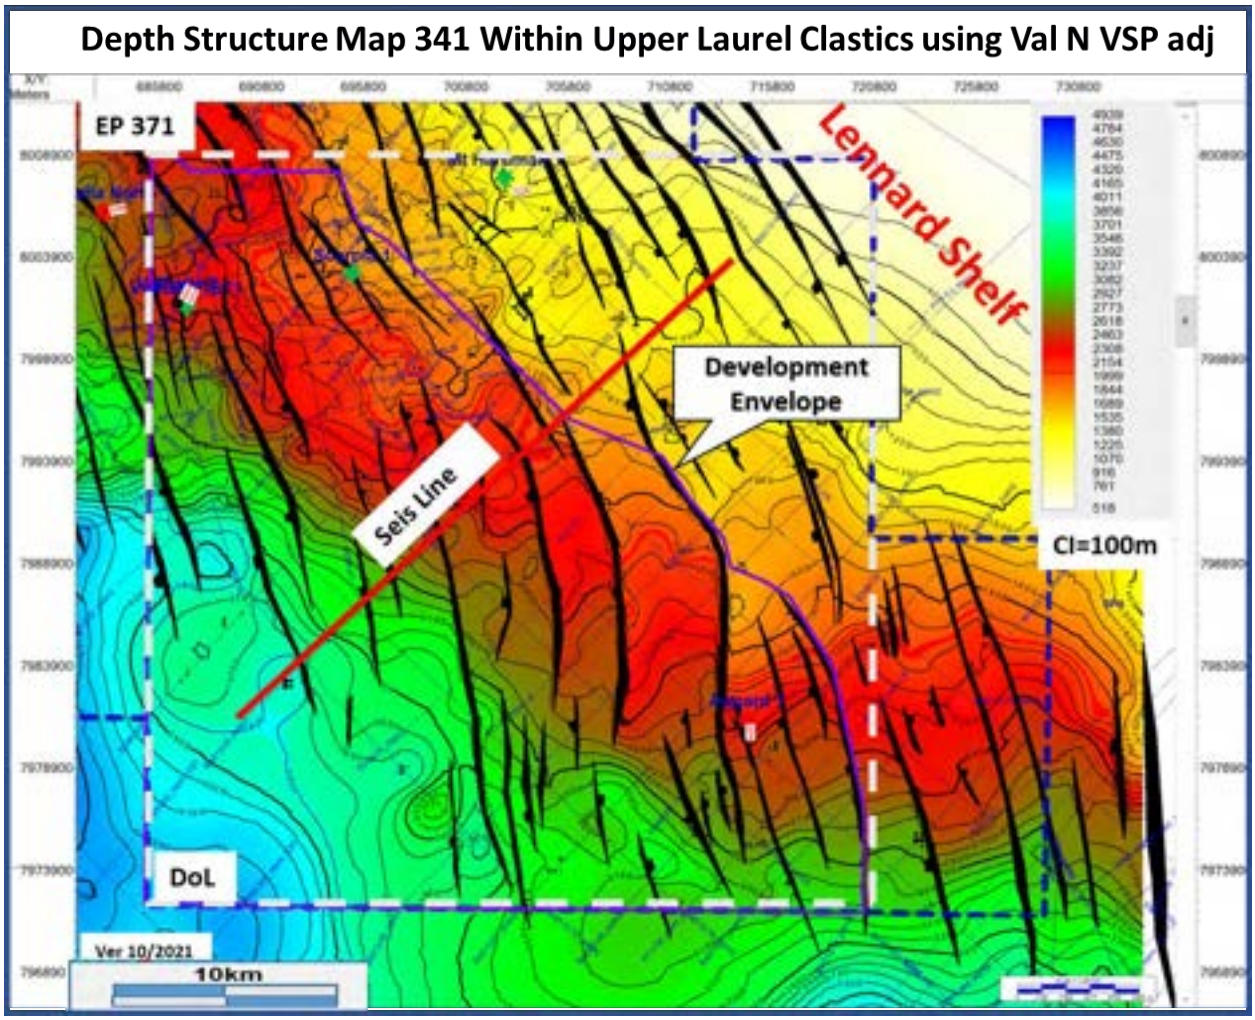

Figure 2-3: The 341 surfaces just above the Upper Laurel Carbonate is shown highlighting a number of downthrown normal faults stepping into the basin. The DoL is marked with the box. The location of the seismic line from Figure 2-2 is also marked

2.4 Definition of subsurface state of stress

BNR's current understanding of stress is based on data from the recently drilled Asgard 1, Valhalla North 1 and other Valhalla wells as well as the world stress map (WSM 2016). SH_{max} is anticipated to be in a north-east to south-west direction based on existing well data (Figure 2-4) and a review of the world stress map (WSM 2016). BNR's understanding of the subsurface state of stress is as follows:

- the stress regime is considered strongly to mildly anisotropic with fractures propagating in tension primarily in the SH_{max} direction.
- per Schlumberger (Figure 3-7), the Valhalla region (area between the Valhalla wells) is likely to be in strike-slip stress regime ($SH_{min} < Sv < SH_{max}$). Image logs identified both wellbore breakouts (WBO) and perpendicular drilling induced fractures (DIF) simultaneously, indicating high horizontal stress anisotropy. The occurrence of both WBO and DIF in the vertical plane, where identified, eliminates reverse faulting as a potential current day stress regime
- the amount of tectonic stress is not known but further work can be done on the past completions to better understand and calibrate a mechanical earth model
- there is significant vertical heterogeneity within the Laurel Formation. Significant variations are noted in the static Young's modulus and unconfined compressive strength which can provide potential vertical frac barriers.

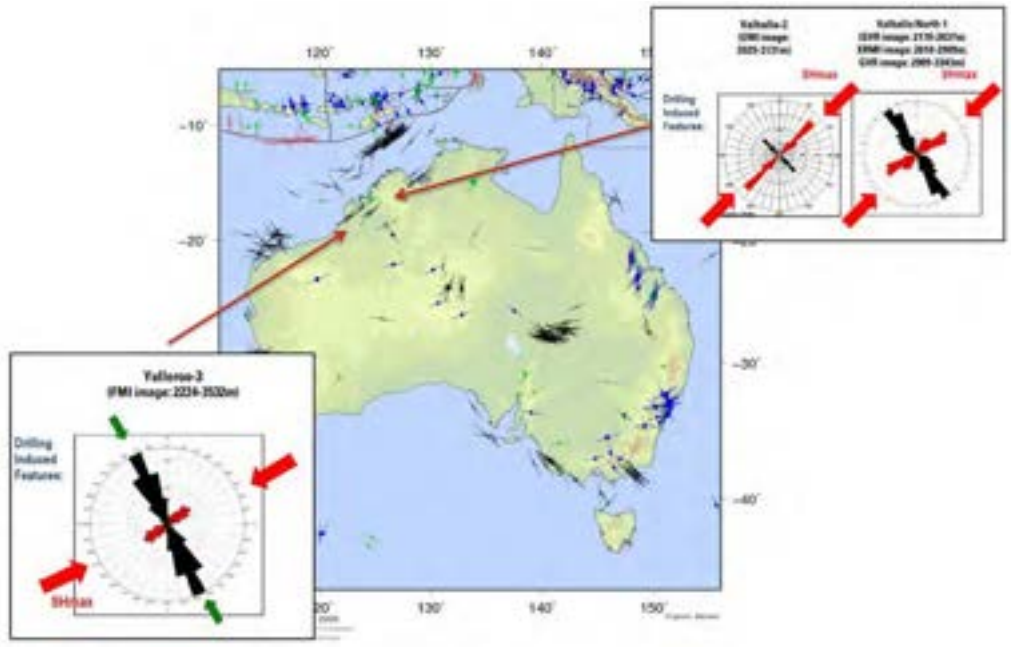

Figure 2-4: SH_{max} for three wells within the northern portion of the Canning Basin along with the world stress map. SH_{max} is north-east to south-west, and is consistent across this part of the Fitzroy Trough

Downhole geomechanical logs obtained on Valhalla North 1 and Asgard 1 wells and their interpretation and analyses are highlighted in the final well reports and not included here. In short, drilling induced tension fractures and borehole breakouts are common in the wells like Valhalla North 1 based on the image logs. The orientation of these features indicates a regime with a broadly north-east to south-west oriented present day maximum SH_{max}.

2.5 Future wells

As a part of the Well Management Plan development and the International Organization for Standardization (ISO) ISO 16530-1-2017 requirement, a prognosis will be prepared for each well location (Figure 2-5). Per the ISO, the prognosis provides a “description of the expected formations and fluids, pore pressures, formation strength and temperatures to be encountered, including their uncertainty” (ISO 2017). Furthermore, “the information should cover subsurface aquifers and hazards, faults and high-pressure stringers, i.e., pore pressure prediction, freshwater zone protection, stratigraphic prognosis, well orientation and length of penetration through production zone” (ISO 2017).

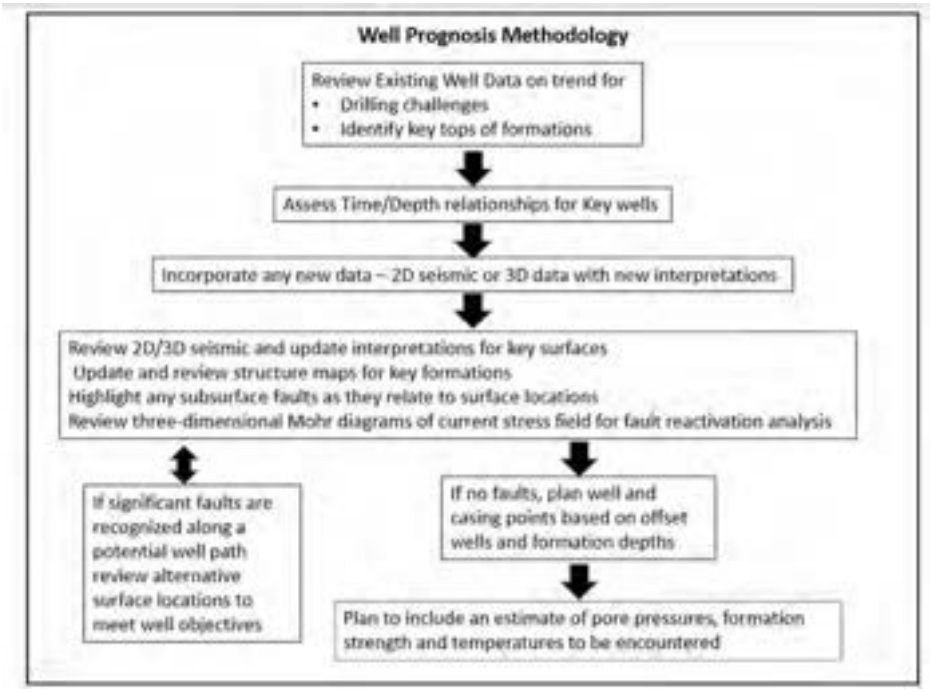

Figure 2-5: Well prognosis methodology

After drilling the future wells but prior to HFS, a workflow examining the key formations and zones is followed. Here stimulation models are produced to understand fracture height and lengths. Figure 2-6 highlights an example workflow that is likely to be followed through.

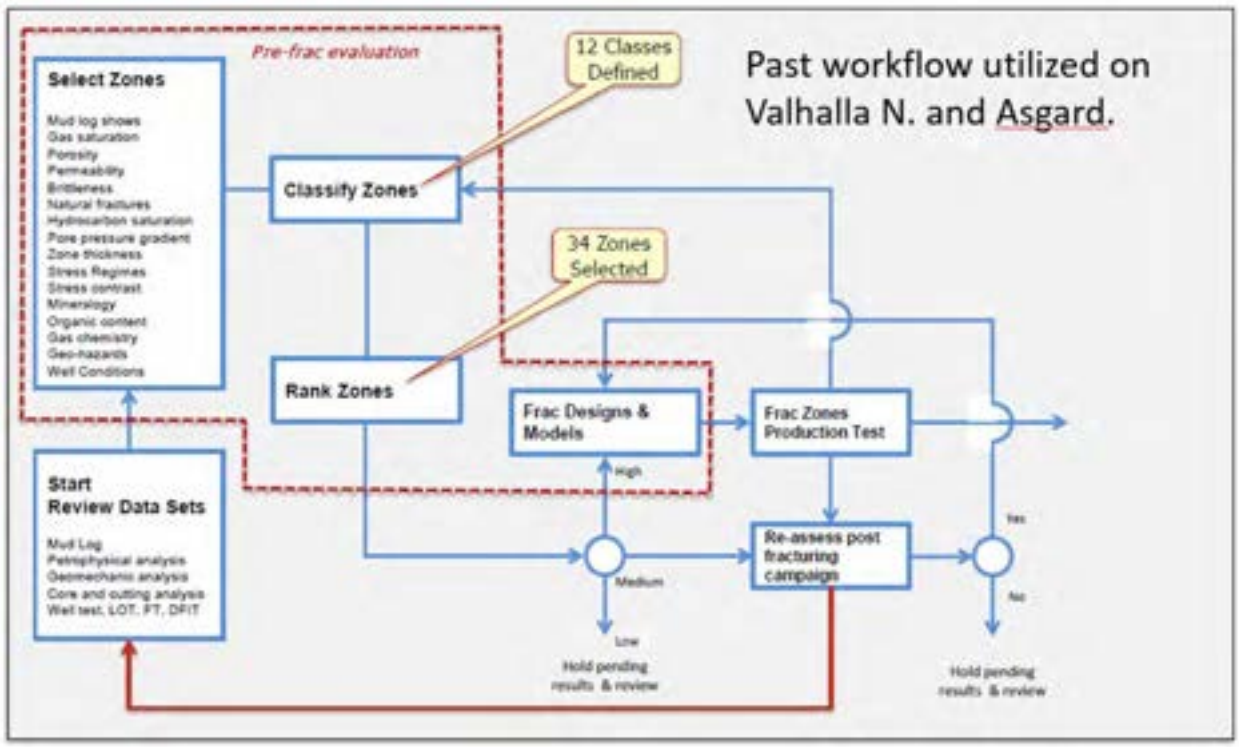

Figure 2-6: Example workflow for considering the zones to be tested for the HFS

A risk analysis is then reviewed for key HFS zones and utilises offset well geomechanical and geotechnical data. Such a risk analysis workflow used in the past is highlighted below in Figure 2-7.

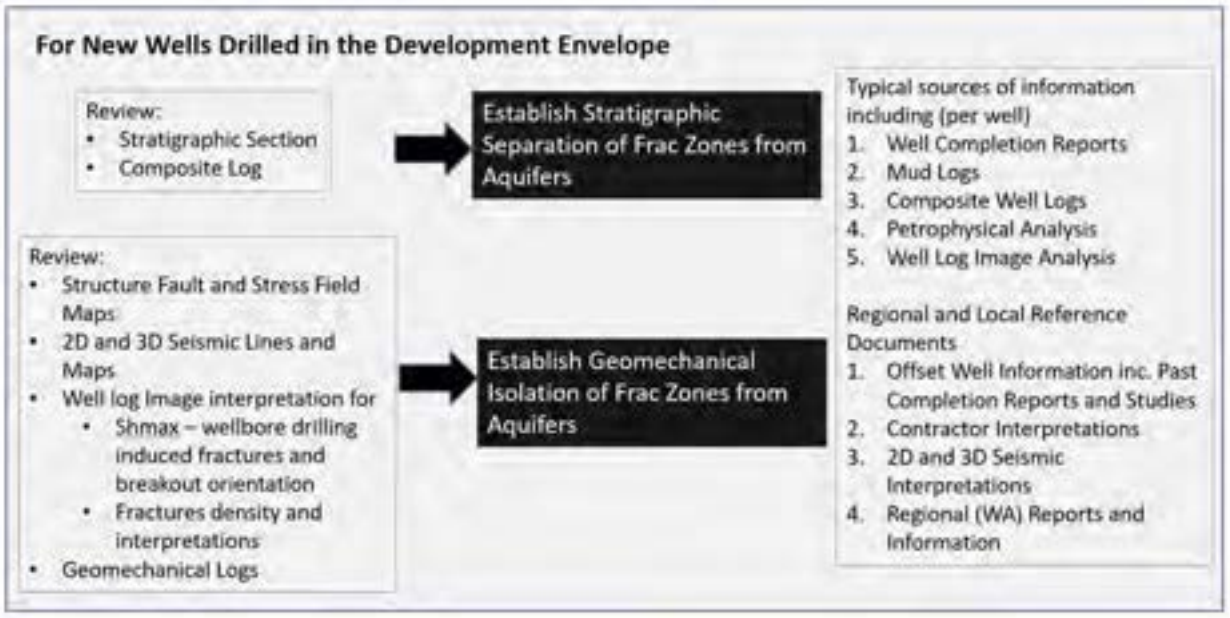

Figure 2-7: Example of data that is considered for a risk analysis for any HFS as it relates to the relationships between the HFS and aquifers

3 Identification of hydrologically active faults or fracture zones

Based on the observation that most wells drilled below the Anderson Formation shale contain hydrocarbons, it is believed that the shale within the Anderson Formation can be considered a seal. There is no conventional core in the nearest offsetting wells, but core in Yulleroo noted cemented fractures at depth.

Based on the current data from the Valhalla and Asgard areas, it is also likely that faults appear to be mainly sealing. Some faults do cut through to the near surface based on seismic data. There is some gas presence noted in the shallower Grant Group units in the Valhalla area but not encountered in the Asgard 1 well. It can be inferred that through geological time there has been some hydrocarbon migration into the shallower Grant Group. The industry has however not noted natural petroleum presence on the surface, thus suggesting that the regional faults are not significantly open and conductive. There is potential for open and conductive fractures within the Laurel Formation based on formation micro-imager data, however pressure data support an overpressured Laurel Formation section so hydrocarbons appear to be contained.

Prior to drilling, a WMP along with a well prognosis will be created to review the existing and future seismic data to ascertain and/or minimise drilling through significant faults.

3.1 Historical analysis

Buru Energy previously characterised the subsurface geology using the most recent well data that exists on EP 371 (Buru Energy 2013). A few key figures of this past work demonstrate the existing well data and their interpretation. BNR plans to follow a similar workflow for the wells associated with the Proposal.

The following interpretations can be made from Figure 3-1 to Figure 3-4, relating to the Valhalla North 1 area:

- the Valhalla North 1 well was drilled into the Lower Laurel Clastics. There are three or four down to the south-west normal faults within a few kilometres of the well. SH_{max} is north 50° east.
- the base of potential Grant Group aquifer (Betty unit) is located at 1,614 m. The highest planned stimulation considered was at 2,355 m in the upper Laurel Clastics (planned 741 m apart); the actual uppermost stage was at 2,827 – 2,872 m resulting in a separation from the Grant Group aquifer of 1,213 m.
- hydrocarbon saturation increases just below the Anderson Formation shale, which provides a seal for the gas as well as a fracture barrier
- the more quartz-dominated rock generally has a lower stress than the clay-rich rock. Carbonate units have an even higher stress.

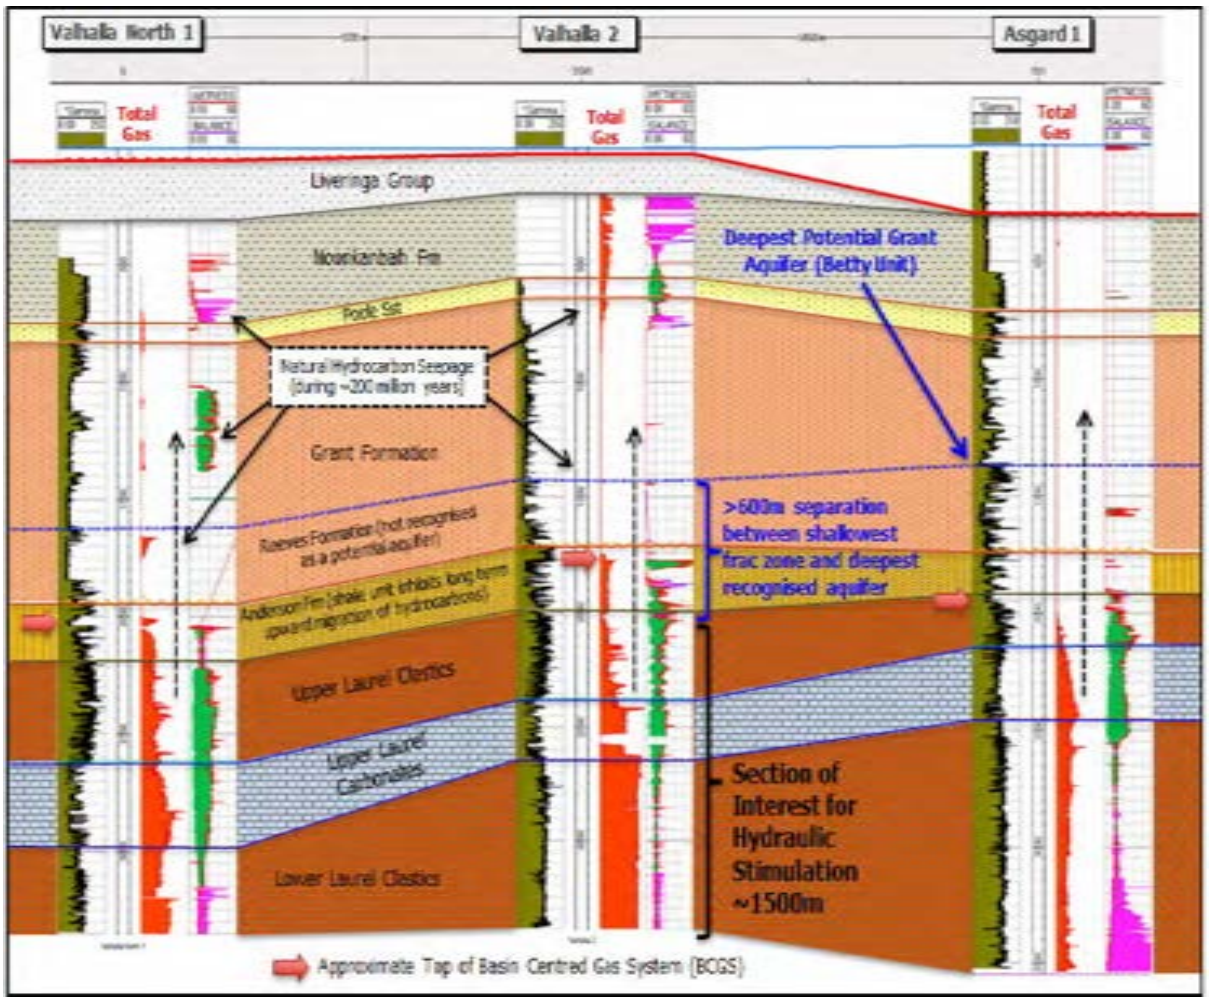

Figure 3-1: Relationships of the Laurel Formation to the overlying Grant and Reeves formations

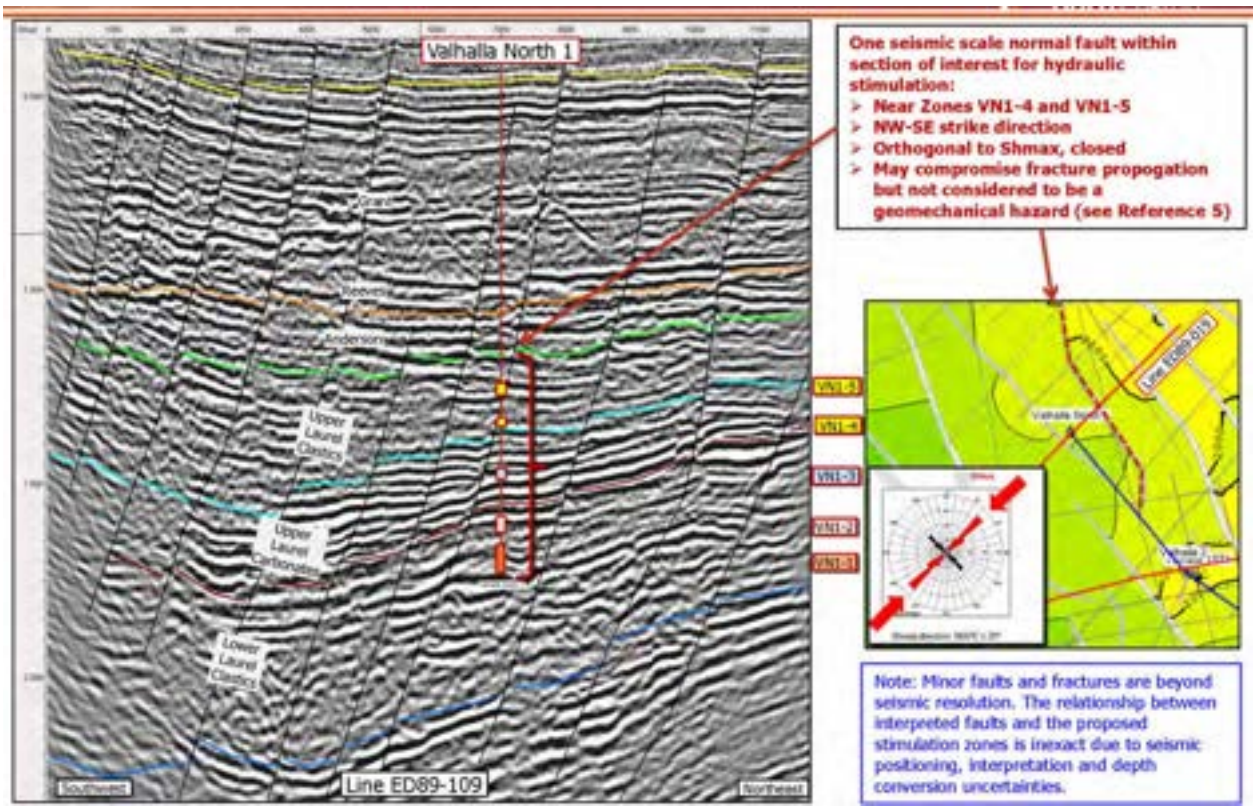

Figure 3-2: Valhalla North1 – 2D Seismic section showing the detail of the Upper Laurel Formation and faults as well as the relationship to the overlying Anderson, Reeves and Grant Group formations. The base of the Reeves Formation is noted as not a consistent reflector

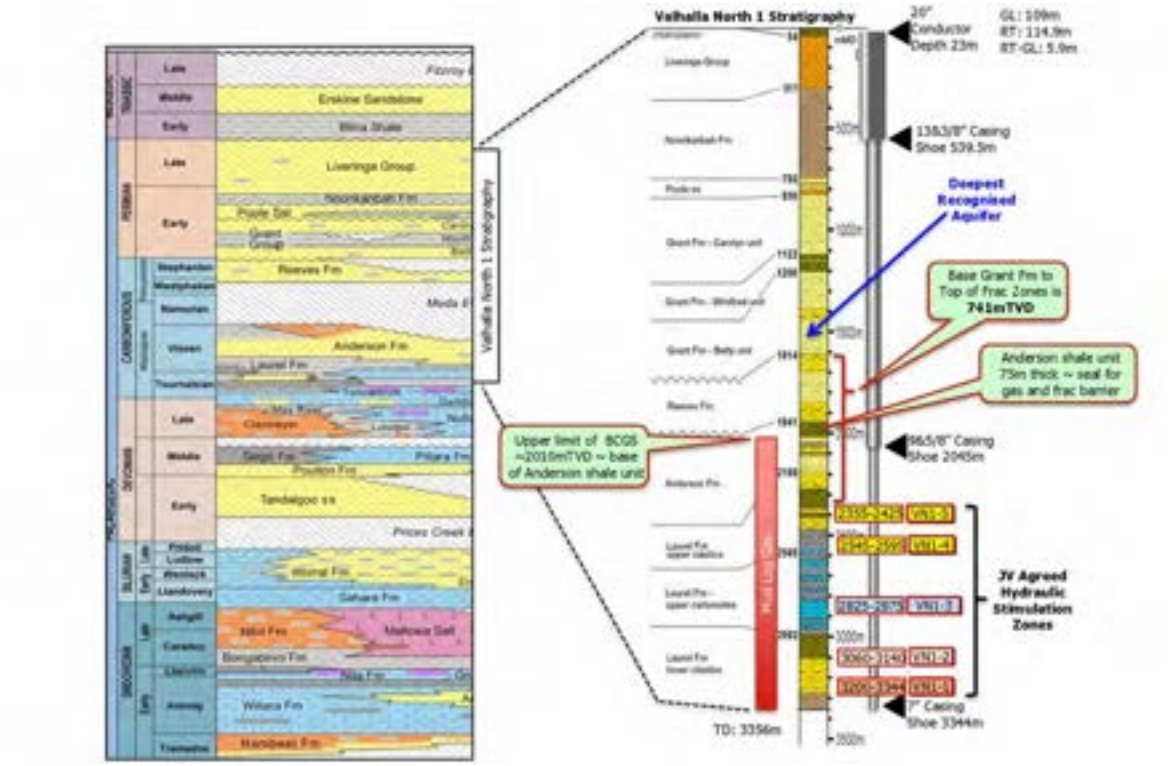

Figure 3-3: Valhalla North 1 stratigraphic section highlighting the Anderson Formation shale seal between the hydrocarbon bearing zones of the Anderson and Laurel Formations, and the Grant / Reeves sections above along with proposed hydraulic stimulation zones. Actual zones for the stimulations were deeper than the shallowest ones illustrated here

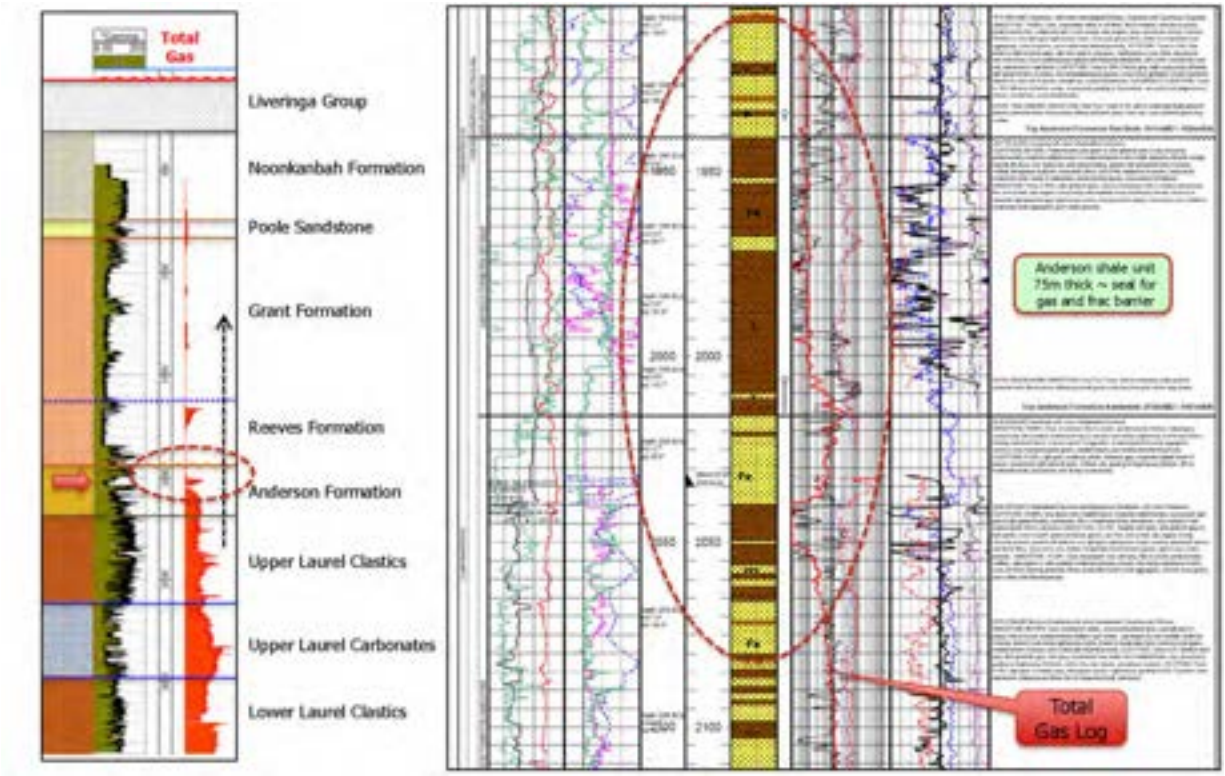

Figure 3-4: Composite well log for Valhalla North 1 showing the shale seal and the top of the gas section

From Figure 3-5 to Figure 3-7 below, the following can be interpreted for the Asgard 1 well:

- the deepest Grant Group layer is at 1375 m; the shallowest proposed stimulation was at 2045 m (actual shallowest stage was at 2567 m (planned distance from Grant Group – 670 m; actual distance was 1192 m)
- gas saturation increases in the upper Laurel Formation below the shale sealing Reeves Formation from the Anderson Formation
- SH_{max} is similar to the Valhalla area and is north-east to south-west.

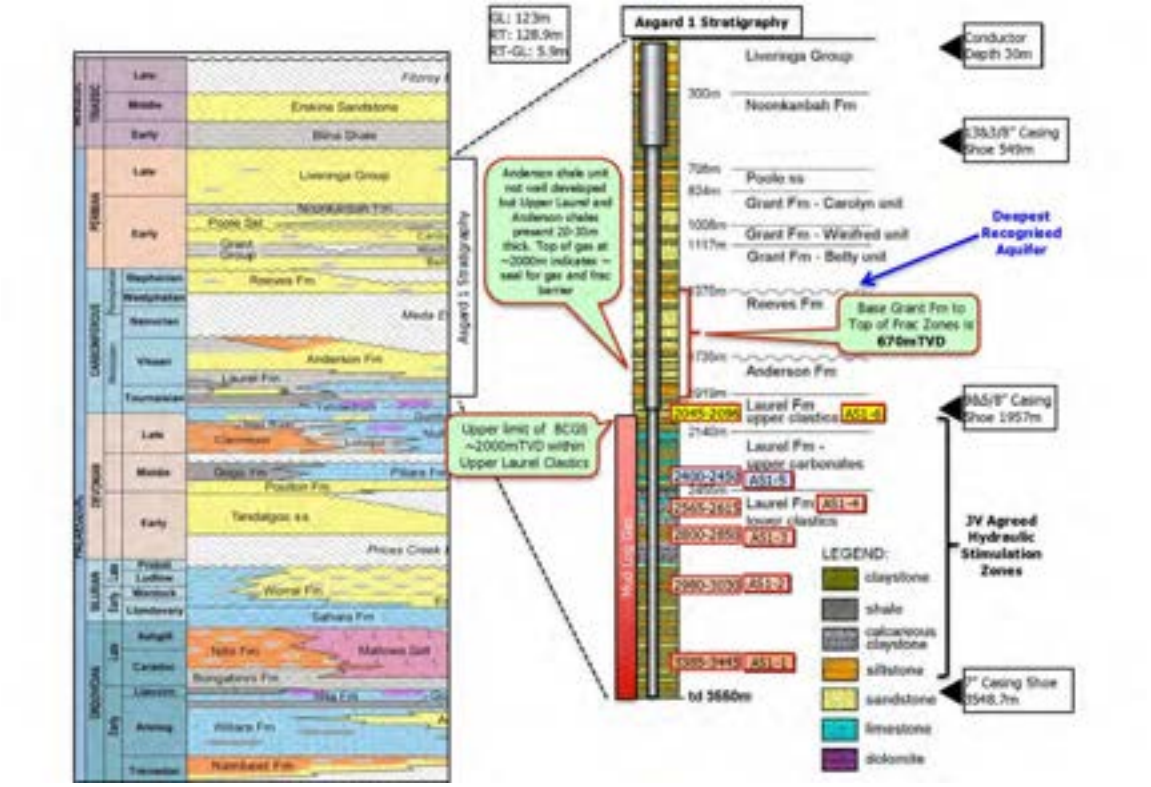

Figure 3-5: Asgard 1 stratigraphic section noting the deepest aquifer and the underlying siltstones of the Reeves and Anderson Formation shales and hydrocarbon zones within the Laurel Formation

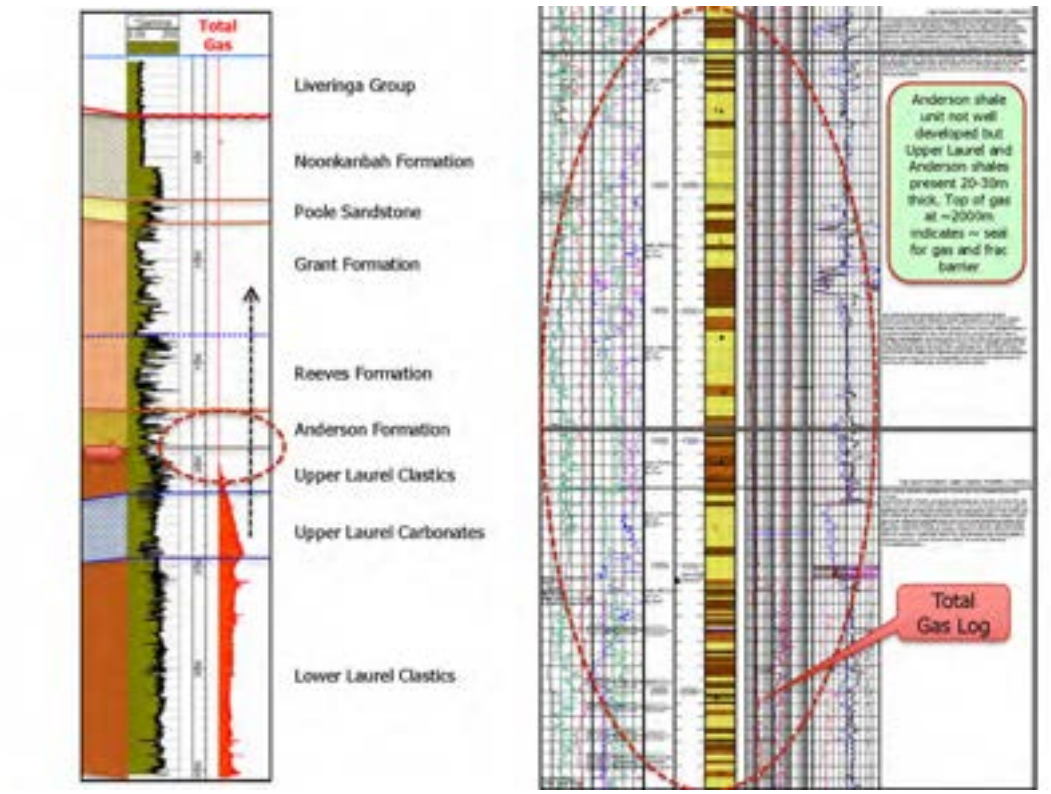

Figure 3-6: Asgard 1 composite well log showing the top of gas in relationship to the upper Anderson and Reeves Formations

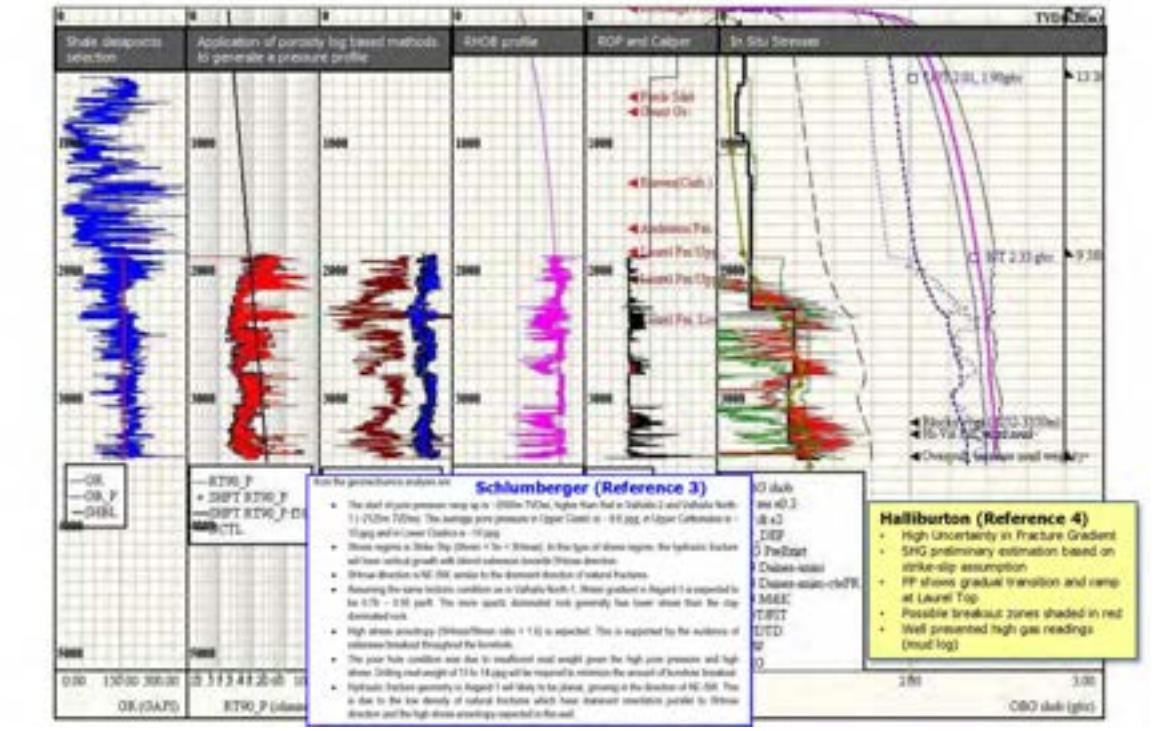

Figure 3-7: Asgard 1 geomechanical log from Haliburton as well as notes from Schlumberger

4 Assessment of well-seal effectiveness

Data of three petroleum wells (Table 4-1) drilled within the Development Envelope by the previous operator of EP 371 provides a detailed two-dimensional cross section of the formations located beneath the Development Envelope, shown in Figure 16.

Given the presence of trapped hydrocarbons in the lower Anderson and Laurel which are not significantly found above, along with evidence of overpressure below, BNR determined that the Anderson Formation provides a geological seal between the targeted Laurel Formation and shallower formations.

Data from these historical wells indicate that Anderson Formation is between 184 m and 279 m thick, this is similar to the thickness of the Kolkata shale present in the Perth Basin which also acts as a geological seal for the targeted formation.

Table 4-1: Subsurface formation data

Formation	Dominant lithology	Classification	Elevation – base of formation (m AHD)			Thickness	Total Dissolved Solids (mg/L)
			Valhalla 2	Valhalla North 1	Asgard 1		
Liveringa	Carbonate / shale	Minor aquifer, Aquitard	-84	-196	-171	84 to 196 m	500 to 12,400
Noonkanbah	Shale	Aquiclude	-441	-635	-579	357 to 439 m	550 to 800
Poole Sandstone	Sandstone and Shale	Aquifer or Aquitard	-524	-715	-695	80 to 116	300
Grant Group	Sandstone	Aquifer	-1,332	-1,499	-1,240	545 to 808	800 – 1,000
Reeves	Sandstone	Aquifer	-1,588	-1,826	-1,606	270 to 366	No data available
Anderson	Sandstone, siltstone, shale	Minor aquifer, Aquitard	-1,858	-2,105	-1,790	184 to 279	70,000 – 100,000
Laurel	Limestone, shale, siltstone and sandstone	Minor aquifer, Aquitard	<-3,350	<-3,241	<-3,400	1136 to 1610	70,000 – 100,000

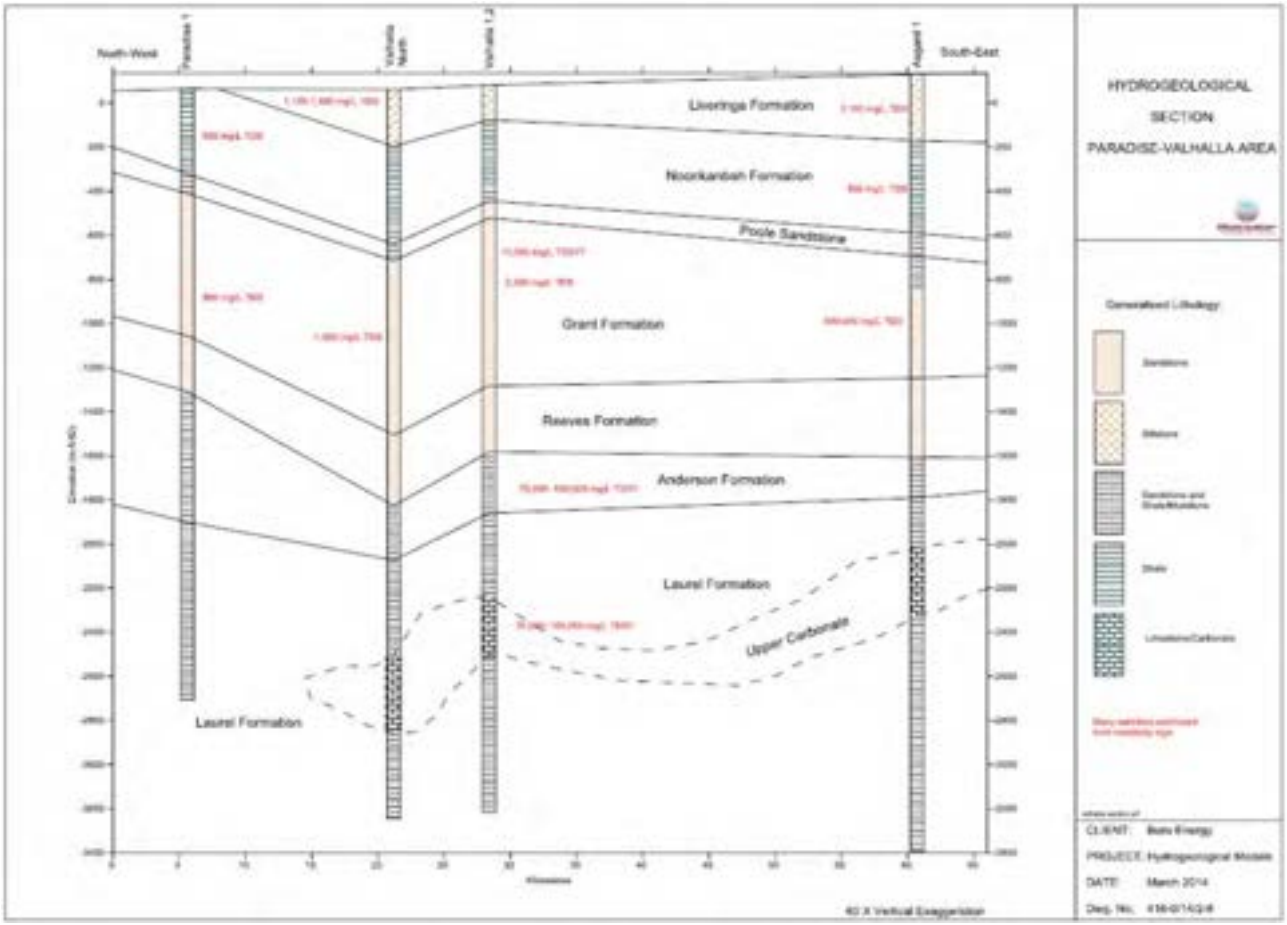

Figure 4-1: Hydrogeological cross section of the Valhalla and Asgard areas

5 Definition of potential high-risk zones

Currently this geotechnical risk assessment indicates substantially thick Grant Group and Poole Sandstone formations, along with the Reeves Formation section overlying the unconventional Laurel and Anderson Formations. Based on past drilling of the Laurel Formation section with no major drilling issues, BNR does not anticipate any significant high-risk zones directly related to drilling through the overall section. For the shallow formation section, through the aquifers, appropriate mud weight and casing design will be implemented to cover the shallow interval. For the deeper Laurel Formation section, BNR expects there should be little flow into the well during drilling operations over the hydrocarbon bearing intervals as the unconventional resources are noted as extremely tight with low permeability.

BNR has not noted any significant reverse faults providing juxtaposition of the Grant Group's potential aquifers adjacent to the Anderson or Laurel Formation sections in the downdip areas within EP 371.

The wellbore design and location will be optimised to minimise drilling through structurally weak geological zones that could shear and deform the well casing. The Canning Basin rocks on the Lennard Shelf are old. BNR does not anticipate drilling through salts or coals. Faults and a potentially weak shear zone surrounding them are the most likely weakest zone that may be encountered during the Proposal. It is our intention to not drill extensively through fault zones. Hydraulic stimulations in the proposed horizontal wells will be modelled prior to a stimulation and designed within the engineering tolerances.

BNR has not recognised any high-risk zones as such.

6 Expertise of current review

This geotechnical risk analysis has been prepared and reviewed by BNR using internal expertise.

6.1 Jay Moore, P.G

Chief Geoscientist, with over 24 years of diversified upstream oil and gas experience as an exploration and development geologist for companies in the United States (U.S.) such as Denbury, Encore Permian, XTO, BMOG). His experience includes prospect generation, planning, and drilling oversight of hundreds of vertical and horizontal wellbores in both conventional and unconventional plays (Wolfcamp, Bone Spring, Barnett Shale, Haynesville, Cotton Valley and others). Well versed in cross-discipline integration with experience in drilling, completion, and production operations.

6.2 George Witman

Vice President Drilling and Completions, with 22 years of upstream oil and gas experience, focused exclusively on high-efficiency development of U.S. unconventional resources including the Barnett, Eagle Ford, and Permian Basin. He managed EOG Resources' completions operations and water resources for the Permian Basin from 2016-2019. Responsible for a >$900 milliong annual completions budget, 6-8 operated frac fleets, and over 100 employees / contractors. Reduced completions costs by 29% and increased completions efficiency by 43% over a 3-year time frame. George holds a Bachelor of Science (B.S.) in Mechanical Engineering from Cornell University (Magna Cum Laude).

6.3 Mark Mueller

Drilling Supervisor after spending 7 years with BHP Billiton. He held roles in engineering and operations supervision across the drilling and completions function, and has planned and executed drilling projects in North American Shale, Australia, and the Gulf of Mexico. Mark holds a B.S. in Petroleum Engineering from Texas A&M.

6.4 Jon Holt

Director of Completions, with over 16 years of experience in the oil and gas industry. He spent 8 years with EOG Resources creating various completion strategies including: parent/child development, reservoir geomechanics evaluation, and exploration play design. Jon holds a B.S. in Chemical Engineering from Colorado School of Mines and an Master of Business Administration from University of Denver Daniels School of Business.

6.5 Rob Hull

Geophysical Consultant, with 27 years upstream oil and gas experience as a geotechnical specialist (for companies such as Pioneer Natural Resources, Maxus Energy, YPF- Repsol). He is a leader in 3D seismic, microseismic, geomechanics and fibre optics. He has experience in the unconventional Permian Basin, and Barnett Shale as well as conventional plays of West Africa, South Africa, and Indonesia. Rob holds a B.S. in Geology from the University of Rochester and a Master of Science. in Geosciences from the University of Texas at Dallas.

Annex A. Early warning mechanism

The purpose of implementing an early warning mechanism process is to enable efficient and consistent decision making when responding to anomalous seismic events during HFS operations.

1. Overview

Microseismic monitoring is the passive observation (magnitude and location) of very small-scale ground movements or stress drops which can occur during HFS activities. Unlike traditional 3D seismic technologies, which measure acoustic reflections from an energy source, microseismic monitoring is a passive method, meaning it listens and measures the occurrence of natural and man-made seismic events within the earth. Passive methods provide a continuous 4D record of seismicity in the monitoring area, rather than individual snapshots in time obtained by conventional 3D seismic methods. These micro seismic events, often with magnitudes less than zero, are too small to be felt on the surface, but can be recorded by sensors called geophones or seismometers.

A microseismic event can occur from a natural build up and release of stress in the subsurface. Typically, as compaction and sedimentary processes take place within the earth, unequal distributions of lithology and fluids occur which can result in natural slippage and stress release along discontinuities or faults. Seismographic networks on the surface locate these natural slippages through time, highlighting the locations of these earth movements. Significant earth movements often greater than a magnitude of 3.5 on the Richter scale can be felt on the surface but seismometers can detect events that are far weaker. In oil and gas operations, during a hydraulic stimulation we modify the local pressure and stress at a given injection point along the well to create a hydraulic fracture. The hydraulic fracture opens up against the minimum horizontal stress direction and propagates away from the wellbore. As the fluid and pressure increase, the fracture forms and extends into the unconventional shale providing a conduit of hydrocarbons back into the well. The hydraulic fracture during its formation introduces local stress changes, which may generate microseismic events that can be monitored with a sensitive network of seismometers. These events can be mapped as the HFS operations progress. After pumping stops, the fractures begin to close and the localised fluid begins to diffuse in the host rock. Minor stress redistributions can further occur generating a falling off of microseismic events through time.

Microseismic monitoring has the ability to tell us the time, location and magnitude of microseismic events. During hydraulic stimulation, microseismic monitoring can be used to determine the fracture geometry and azimuth, identify out-of-zone events, evaluate fracture complexity and intensity, optimise injection strategies and staging, estimate stimulated reservoir volume, understand fracture development and stimulation effectiveness.

Microseismic monitoring utilises microseismic monitoring stations arranged in an array around the well to be stimulated. Receivers can be placed in different location, such as on the surface, buried under shallow earths, in shallow monitoring wells (10-30 m below ground level) or in deep boreholes. Depending on the design and purpose, a typical microseismic monitoring station consists of a sensor, data acquisition unit and radio (for real time).

2. Monitoring

The CSIRO's Gas Industry Social and Environmental Research Alliance (GISERA) is undertaking setting up a baseline study for the northern Canning to characterize the current natural seismic activity for the basin (GISERA 2021–). The collection of baseline information is important to help distinguish between natural and man-made events (e.g. quarry blasts or oil and gas extraction activities). Currently there are national catalogues available for the Canning Basin showing past natural earthquake activity. This GISERA work with an additional fourteen seismometers will enhance the understanding of natural earthquakes. The current national sparse network of receivers (currently three in the northern Canning Basin) cannot detect and locate events less than a magnitude of 2.5 within the basin. The new network should resolve events down to a 1.5 magnitude. This project will be set up from 2021 to 2025 and is currently 10% complete (GISERA 2021–). At least one monitoring station is proposed to be located in EP 371. GISERA notes that "increased seismic activity associated with hydraulic fracturing is an area of community concern and this baseline study will distinguish any potential increase in seismic activity due to planned gas extraction operations from other

seismic sources" (GISERA 2021–). Furthermore, this research addresses recommendations from the 2018 Independent Scientific Panel Inquiry into Hydraulic Fracture Stimulation in Western Australia (Independent Scientific Panel Inquiry 2018).

It should be noted that the Development Envelope is located in a remote area of the Canning Basin. There are no inhabitants within the Development Envelope as well as no significant man-made structures. Hundreds of natural earthquakes have been recorded in the Canning Basin in the past, with at least one 6.6 magnitude event occurring off of Broome in 2019. With the addition of additional instrumentation by GISERA there will likely be a significant jump in the number of weak natural earthquakes that can be detected within the basin.

2.1. Timing of monitoring

Given GISERA's efforts for the basin and locating a seismometer within EP 371 prior the Proposal's stimulations, BNR does not anticipate needing substantial additional baseline information. The GISERA data should produce a catalogue of the naturally occurring low-level events over multiple years. BNR does plan on recording some additional baseline information at an even lower magnitude than GISERA, however over a limited time around HFS. The GISERA work utilising standard seismometers can record for months or years prior to the shorter-term local collection of microseismic events that BNR will record. Prior to the deployment of surface HFS equipment, BNR will set up a monitoring program to record events that might occur down to a magnitude of around -1 Richter local magnitude (ML). The scope of microseismic monitoring during the different phases of the HFS operations may involve different methodologies. An example of proposed monitoring program is provided in Table A.

Table A: Example of microseismic monitoring during the different phases of HFS operations

	Proposal phase		
Location of loggers	**Baseline**	**Operations**	**Post-operations**
Surface – GISERA Study	Deployed around the northern Canning with 14 seismometers over multiple years		
Surface – BNR	Array of typically 3 to 5 seismometers around the well to be stimulated, usually for 3-5 days prior.		
Post hole – BNR	Array of typically 3 to 5 seismometers around the well to be stimulated, usually for 3-5 days prior.		

2.2. Project set-up

2.2.1. Objective and initial short baseline program

The GISERA Western Australian surface seismometer program (GISERA 2021–) should be sufficient to understand events down to a 1 (ML). BNR will set up a short-term baseline program to detect and identify background levels of microseismic activity should these levels exist around the wells prior to HFS operations occurring. The array utilised should record down to a -0.5 to -1 ML and be more than sufficient for any induced events. This same array will record events during and after the stimulation for a short period. Depending on operations and logistics, BNR may maintain the network to record a longer duration of the baseline and post operations.

2.2.2. Monitoring stations

Typically, between 3 to 5 surface seismometers may be arranged around the well to be stimulated and may be situated in a low noise environment within a few kilometres of the surface location. Some post hole seismometers may also be situated away from the stimulation.

2.2.3. Recording

Data will be stored internally on data loggers. Data will be retrieved periodically for analysis. Given the short time intervals, most data will be transmitted to a base station via radio as will occur during the HFS operations.

2.2.4. Outputs

Results of the short term baseline microseismic monitoring program along with the GISERA data will be used as inputs into the operational monitoring program and can also be used for comparative purposes during later analysis of microseismic data.

2.3. Operations during HFS

2.3.1. Objective

The objectives are to:

- collect information on microseismic events during HFS operations
- provide data for the monitoring of hydraulic fracture development in real time.

2.3.2. Monitoring stations

A variety of methods can be used to monitor microseismicity during HFS operations. Between 3 to 5 surface seismometers may be set up, and up to 10 post hole powered downhole seismometers may be arranged around the well site at depths depending on soil type, level of detection desired, along with operations capability. Seismometers may also be buried in shallow soil away from the well site.

All sensors will be connected into a radio array network which will broadcast to the microseismic office. Arrays will be tested to ensure they are functional prior to starting pumping.

2.3.3. Recording and processing

Events greater than a certain magnitude (to be determined from baseline data) will be sent directly to the microseismic office on the well site to be processed in real time (refer to Section 2.3.3.1). Events below this threshold will be stored on internal data logger for later processing.

2.3.3.1. Real time processing

The microseismic office will be located at the central well site. This office will contain the central recording facility for the real time monitoring of the fracture stimulation. Incoming data will be analysed by geoscientists to assess the real time propagation of the stimulation. Collected information will then be fed back into the frac data van and correlated against the pumping rate.

2.3.3.2. Management response

A traffic light assessment tool (stop light system) will be developed to risk assess and ensure safe downhole fracture operations, incorporating the magnitude of events from the seismometer array. If thresholds are exceeded during stimulation activities, the operator will have various methods to respond including pausing the stimulation, lowering pressure, injection rates, and volumes as well as skipping a stage.

2.3.4. Outputs

All data will be stored and downloaded for post-operations analysis. Post-operations analysis will examine the data at a higher sampling rate and lower event threshold to ensure no microseismic events were missed during the real-time operation.

Analysis of continuous data collected during the program will be undertaken following the completion of operations. This analysis will include a review of all events along with a review of all waveform data and retriggering of events to see if events were missed. This report will provide an in-depth review of all events recorded prior-to, during and following the hydraulic stimulation, and will be correlated against the pump rates to understand the nature and lateral continuation of HFS activities. The results learnt from the microseismic program implemented during the well monitoring will then be applied to future programs.

Outputs from post processing will consists of copies of all extracted event waveforms, event pick files, event locations files, catalogue of events, updated models and stations corrections, plots of events, and a final report. The following interpretive products might also be developed from the microseismic monitoring program:

- basic engineering report of the interpreted fracture geometry

- advanced engineering report incorporating basic geophysical analysis of sensitivity and accuracy to interpret fracture geometry and evaluate the HFS
- basic geophysical processing and quality control report describing the workflow employed and corresponding data accuracy and confidence attribute
- advanced processed report described the workflow and corresponding interpretation.

2.4. Post-operations

2.4.1. Objective

The objective of post-operations monitoring will be to collect information on microseismic events following the HFS program as the stress is released from the geological profile. Typically, there are few events after pumps shut down with the majority occurring within a few hours of the end of operations.

2.4.2. Monitoring stations

Using the same equipment that was used during the stimulation, the data will be recorded post stimulation shut down for a short period typically on the order of a few days.

2.4.3. Recording

Data will be stored internally on data loggers and picked up at decommissioning. Should multiple stimulations take place over a short period of time, the recording stations will likely be maintained and be operational for multiple weeks or months. Data will be transferred to the central office via radio network or retrieved on internal storage devices after the operations are complete for analysis.

2.4.4. Outputs / Reporting

The outputs from post processing will include a report comparing microseismic activity during HFS operations to microseismic activity before and after operations.

Executive Summary

Bennett Resources Pty Ltd (Bennett Resources) is proposing to undertake the Valhalla Gas Exploration and Appraisal Program located approximately 51 kilometres northwest of the townsite of Fitzroy Crossing (Shire of Derby-West Kimberley) in the Dampierland Bioregion in the State of Western Australia. Eco Logical Australia was commissioned by Bennett Resources to undertake a Detailed and Targeted flora and vegetation survey and a Basic fauna survey of the Project Area, which consists of access tracks, camp locations of proposed well pads (the Disturbance Footprint; 112.46 hectares), and an additional 15.69 hectares of alternative tracks (Additional Survey Area; 128.15 hectares total).

A desktop assessment of the Project Area was undertaken to inform local and regional context, to assess for the potential presence of conservation significant species and vegetation associations, and to inform the flora and fauna survey in terms of landform, vegetation associations, fauna habitat and accessibility. A Detailed and Targeted flora and vegetation survey and a Basic fauna survey were conducted by Eco Logical Australia from 3 to 10 March 2021. An additional supplementary survey was conducted from 25-27 May 2021.

A total of 235 flora species representing 54 families and 130 genera were recorded from the 64 quadrats established within the Project Area. Average species richness per quadrat was 27 species, ranging from a low of 7 species in ELA57 to a high of 53 species in ELA39. A species accumulation curve determined that the number of flora species recorded represents approximately 91.7% of the species potentially present within the Project Area. Families with the highest number of species included Fabaceae (42 species), Poaceae (40 species) and Malvaceae (18 species). *Acacia* was the best represented genus throughout the Project Area with seven taxa recorded.

No Threatened flora listed under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* or the State *Biodiversity Conservation Act 2016* were recorded within the Project Area. One Priority flora species, *Nymphoides beaglensis* (listed as Priority 3 by the Department of Biodiversity, Conservation and Attractions), was recorded within the Project Area. This species was recorded from eight point-locations totalling 112 individuals, all of which were found within seasonally inundated depressions within the CbEc vegetation community. A total of four flora species were recorded as range extensions within the Project Area, namely *Cajanus latisepalus*, *Lindernia chrysoplectra*, *Lindernia clausa* and *Tephrosia remotiflora*.

A total of nine introduced flora (weed) species were recorded within the Project Area, one of which **Calotropis procera*, is listed as is listed as a Declared Pest – s22(2) under the State *Biosecurity and Agriculture Management Act 2007*. **Calotropis procera* was recorded within five quadrats in the Project Area, namely ELA20, ELA33, ELA35, ELA59 and ELA60.

A total of 13 vegetation communities were delineated and mapped within the Project Area, generally comprising broad mixtures of *Adansonia gregorii*, *Corymbia* and *Eucalyptus* spp., *Atalaya hemiglauca, Bauhinia cunninghamii* and *Erythrophleum chlorostachys* woodland over mixed *Acacia*, *Grevillea*, *Hakea* spp. shrubland over *Triodia* spp. hummock grassland and *Aristida*, *Eriachne*, *Eragrostis* and *Sorghum* spp. tussock grassland. Landforms recorded across the Project Area comprised sandy clay to light clay flats and gentle slopes, dune slopes, crests and swales and open depressions and creekline communities. None of the vegetation associations delineated within the Project Area were inferred to represent any

known or potential conservation significant communities listed under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999*, the State *Biodiversity Conservation Act 2016* or by the Department of Biodiversity, Conservation and Attractions.

The Project Area contained three broad fauna habitat types, namely Fauna habitat 1: Mixed open woodland over grassland on sandy clay flats and slopes, Fauna habitat 2: Mixed open woodland over tussock grasses on dune slopes and crests and Fauna habitat 3: Eucalypt open woodland and mixed shrubland on closed depression and creekline. A total of 75 fauna species were recorded during the field survey. This number comprised of 52 birds, five mammals, eight reptiles and ten invertebrates.

Secondary signs (i.e. diggings) of the Greater Bilby (*Macrotis lagotis*), listed as Vulnerable under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* and the State *Biodiversity Conservation Act 2016*, were recorded within the Project Area at four locations in the south-east of the Project Area within Fauna habitat 2.

A total of two flora species considered as Aboriginal significant bush foods were recorded within the Project Area, namely *Adansonia gregorii* (Boab) and *Carissa lanceolata* (Conkerberry). Within the Project Area, boab trees were recorded as a dominant or associated species within five of the 14 vegetation communities described, at a <5% cover. Of note was one particularly large Boab tree occurring across a portion of the track leading to the Midgard well site (m 685634E; m 7992864N). Conkerberry was recorded as a dominant or associated species within ten of the 14 vegetation communities described, at a <5% cover.

A total of four fauna species considered as Aboriginal significant bush foods were recorded within the Project Area, namely *Ardeotis australis* (Australian Bustard), *Osphranter rufus* (Red Kangaroo), *Varanus gouldii* (Sand Goanna) and *V. panoptes* (Yellow-spotted Monitor). Australian Bustard was recorded from one location within the Project Area (m 683743E; m 7992977 N), however is likely to utilise most habitats found throughout the Project Area for foraging. Red Kangaroo (*Osphranter rufus*) was recorded from scats throughout the Project Area and spotted in the distance at various locations and is likely to utilise most habitats found throughout the Project Area. During the field survey, both *Varanus gouldii* (Sand Goanna) and *V. panoptes* (Yellow-spotted Monitor) were spotted several times sunbaking along tracks. These species are likely to utilise all fauna habitats found throughout the Project Area for burrowing and/or foraging.

1. Introduction

1.1. Project background

Bennett Resources Pty Ltd (Bennett Resources) is proposing to undertake the Valhalla Gas Exploration and Appraisal Program (the Proposal) located approximately 51 kilometres (km) northwest of the townsite of Fitzroy Crossing (Shire of Derby-West Kimberley) in the Dampierland Bioregion in the State of Western Australia (WA; **Figure 1**).

The Proposal was initially referred to the Environmental Protection Authority (EPA) under Section 38 of the State *Environmental Protection Act 1986* on 25 June 2020 under the title: EP 371 Laurel Gas Exploration and Appraisal. The EPA set the level of assessment of the initial referral to a Public Environmental Review. On 3 December 2020, Bennett Resources formally terminated the assessment of the Proposal, and on 24 December 2020 referred to the EPA a revised program under a new Proposal title: Valhalla Gas Exploration and Appraisal Program.

In July 2021, the EPA Services drafted an Environmental Scoping Document (ESD) that details the baseline environmental studies required to form part of the Environmental Review Document.

As detailed in the ESD, Bennett Resources is required to undertake a biological (flora, vegetation and fauna) assessment of the proposed well sites, access tracks and camps within the Project Area.

1.2. Scope and objectives

Eco Logical Australia (ELA) was commissioned by Bennett Resources to undertake a Detailed and Targeted flora and vegetation survey and a Basic fauna survey of the Project Area, which consists of access tracks, camp locations of proposed well pads (the Disturbance Footprint; 112.46 hectares [ha] total), and an additional 15.69 ha of alternative tracks (Additional Survey Area; 128.15 ha total; **Figure 1**). It is noted that the Project Area (described above) is located inside a broader Development Envelope, which has been included in relevant mapping for general context. Results discussed in this report relate specifically to the Project Area only.

More specifically, the scope of work was to conduct:

- A desktop assessment of the Project Area to inform local and regional context, to assess for the potential presence of conservation significant species and vegetation associations, and to inform the flora and fauna survey in terms of landform, vegetation associations, fauna habitat and accessibility;
- A Detailed and Targeted flora and vegetation survey undertaken in accordance with the EPA *Technical Guidance: Flora and Vegetation Surveys for Environmental Impact Assessment* (2016);'
- A Basic fauna survey undertaken in accordance with the EPA *Technical Guidance: Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment* (2020);
- Preparation of a report combining findings of the desktop assessment and survey findings, including relevant mapping; and
- Provision of a spatial data package prepared in accordance with the Index of Biodiversity Surveys for Assessment (IBSA).

2. Environmental setting[1]

2.1.1. Climate

The Project Area is located in the Dampierland bioregion of WA, as defined by the Interim Biogeographic Regionalisation for Australia (IBRA; Department of Agriculture, Water and the Environment [DAWE] 2021a). The Dampierland bioregion has a semiarid to tropical monsoonal climate (Bastin and the ACRIS Management Committee 2008).

Based on rainfall data from the nearby Bureau of Meteorology (BoM) Liveringa Station weather station (station number 3100, located approximately 20 km northwest of the Project Area; rainfall 2001-current), the area receives an average annual rainfall of 751.4 millimetres (mm), with most rainfall occurring during the months of December, January and February (123.1 mm, 222.3 mm and 175.5 mm, respectively; BoM 2021; **Table 1**).

In the 12 months preceding the field survey in March, the area received a total of 1,082.2 mm, which is above the long-term average. In the three months prior to the field survey in March, the area received a total of 756 mm of rainfall, which is well above average for the same time period (521.1 mm; **Table 1**; BoM 2021).

In the 12 months preceding the field survey in May, the area received a total of 1,193.6 mm, which is above the long-term average. In the three months prior to the field survey, the area received a total of 370.4 mm of rainfall, which is above average for the same time period (312.5 mm; **Table 2**; BoM 2021).

Monthly temperature data is available from the Fitzroy Crossing Aero weather station (station number 3093, located approximately 65 km east of the Project Area; data 1997-current). Maximum mean monthly temperatures in the region range from 30.6°C (June) to 41°C (November). Minimum mean monthly temperatures in the region range from 12.2°C (July) to 25.28°C (December). The temperature at the time of the March survey was hot, with a maximum temperature of 38.5°C and a minimum temperature of 22.9°C recorded (BoM 2021). The temperature at the time of the May survey was hot, with a maximum temperature of 36.8°C and a minimum temperature of 17.5°C recorded (BoM 2021).

Table 1: Rainfall data recorded at the Liveringa weather station (3100) 12 months prior to the March field survey compared to the long-term average (BoM 2021)

Month	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Total

2.1.2. Interim-Biogeographic Regionalisation for Australia

IBRA divides Western Australia into 26 biogeographic regions and 53 subregions based on dominant landscape characteristics of climate, lithology, geology, landform and vegetation (DAWE 2020a). The Project Area is located in the Dampierland (DAL) region, which is characterised by extensive plains, ranges and spectacular gorges, with vegetation characterised by acacia thickets with scattered trees and areas of grassland and savannahs (Bastin and the ACRIS Management Committee 2008). The Dampierland bioregion is further divided into two subregions, the Fitzroy Trough subregion (DAL01) and the Pindanland subregion (DAL02).

The Project Area occurs within the Fitzroy Trough (DAL01) subregion, which is described as having four basic components (Graham 2001):

- Quaternary sandplain overlying Jurassic and Mesozoic sandstones with Pindan. There are hummock grasslands on hills.
- Quaternary marine deposits on coastal plains, with mangal, samphire – *Sporobolus* spp. grasslands, *Melaleuca alsophila* low forests, and Spinifex spp. – *Crotalaria* spp. strand communities.
- Quaternary alluvial plains associated with the Permian and Mesozoic sediments of Fitzroy Trough support tree savannahs of ribbon grass (*Chrysopogon* spp.), bluegrass (*Dichanthium* spp.) and Mitchell grass (*Astrebla* spp.) scattered coolibah (*Eucalyptus microtheca*) - *Bauhinia cunninghamii*. There are riparian forests of river red gum (*Eucalyptus camaldulensis*) and Cadjeput (*Melaleuca* spp.) fringe drainages.
- Devonian reef limestones in the north and east support sparse tree steppe over lobed spinifex (*Triodia intermedia*) and limestone spinifex (*T. wiseana*) hummock grasses.

2.1.3. Rangelands land systems mapping

Rangeland Land Systems mapping, prepared by the Department of Primary Industries and Regional Development (DPIRD; formerly Department of Agriculture and Food Western Australia [DAFWA]; DPIRD 2021a), provides and comprehensive and standardised description of landscapes, soils and vegetation of the Kimberley region of Western Australia at a regional scale (Payne and Schoknecht 2011). These surveys describe the biophysical characteristics of each region and subsequently divide each region into land systems; land systems being defined as repeating patterns of topography, soils and vegetation.

A total of three Rangelands Land Systems have been mapped across the Project Area, namely the Calwynyardah Land System, the Camelgooda Land System and the Djada Land System (Payne and Schoknecht 2011; **Table 3**; **Figure 2**).

Table 3: Rangelands Land System mapping of the Project Area

Land system	Description	Total extent (ha)	Extent (ha) within the Disturbance Footprint	Extent (ha) within the Additional Survey Area	Total extent (ha) within the Project Area	Proportion of total extent within the Project Area (%)
Calwynyardah Land System	Alluvial plains with scalded tracts downslope from lateritic remnants with yellowish loamy soils supporting patchy beefwood-bauhinia low woodlands with curly spinifex and ribbon grass; also minor hard spinifex grasslands.	173,613.7	15.49	3.27	18.75	0.011
Camelgooda Land System	Sandplains, swales and linear sand dunes supporting low pindan woodlands of acacias and low woodlands of bauhinia and bloodwood with curly spinifex and ribbon grass.	1,798,104.1	96.97	7.01	103.98	0.006
Djada Land System	Active flood-plains with levees and levee back slopes supporting ghost gum open woodlands with frontage grasses, and cracking clay back plains supporting ribbon grass-blue grass and Mitchell grass grasslands.	443.548.6	0	5.41	5.41	0.001

2.1.4. Beard's (1979) vegetation mapping

Vegetation type and extent have been mapped at a regional scale by Beard (1979) who categorised vegetation into broad vegetation associations. Based on this mapping at a scale of 1:1,000,000, DPIRD (DAFWA) has compiled a list of vegetation extent and types across WA (Shepherd *et al*. 2002).

A total of four pre-European vegetation associations have been mapped across the Project Area, each of which have more than 99% of their total pre-European extents remaining within the Fitzroy Trough (DAL01) subregion (**Table 4**; **Figure 3**; Government of Western Australia 2019).

Table 4: Beard's (1979) / Shepherd *et al.* (2002) vegetation associations of the Project Area

Vegetation association	Description	Pre-European extent (ha) within the Fitzroy Trough (DAL01) subregion	Current extent (ha) within the Fitzroy Trough (DAL01) subregion	% remaining	Extent (ha) within the Disturbance Footprint	Extent (ha) within the Additional Survey Area	Extent (ha) within the Project Area	Proportion of extent (%) within the Project Area

2.1.5. Hydrology

The Project Area is located in the Fitzroy River Catchment of the Fitzroy River Basin. The Fitzroy River Catchment area spans almost 94,000 km^2, covering more than 20% of the Kimberley region of Western Australia, extending from Derby in the west to Halls Creek and the Leopold Ranges in the east (Pusey and Kath 2015).

The Fitzroy River is the main major river system in the basin and is characterised by a braided channel, anabranching and billabongs on floodplain, with deep permanent pools occur along its whole length, separated by shallower reaches (Pusey and Kath 2015). Rivers, streams and wetlands of the Fitzroy River range from those that rarely flow or are inundated only occasionally (e.g. when large storm events occur) to those that flow most or all year round usually because of connections to groundwater (Pusey and Kath 2015).

One major tributary to the Fitzroy River runs through the Project Area, namely Mt. Hardman Creek (**Figure 4**). A number of rivers and creeks are located within a 30 km radius of the Project Area, including 8 Mile Creek, Fitzroy River, Mt Wynne Creek, Cherrabun Creek, Cunninghame river and Kalyeeda creek (**Figure 4**). Several additional smaller waterbodies (billabongs, waterholes, swamps and dams) are located within 30 km of the Project Area.

2.1.6. Areas of significance

Environmentally Sensitive Areas (ESAs) are defined in the Environmental Protection (Environmentally Sensitive Areas) Notice 2005 under s. 51B of the EP Act. ESAs include areas declared as World Heritage, included on the Register of the National Estate, defined wetlands, and vegetation containing rare (Threatened) flora and Threatened Ecological Communities (TECs).

No ESAs are known to occur within the Project Area. One ESA, namely the Camballin Floodplain, listed on the Register of National Estate, is located approximately 27.2 km to the west of the Project Area (**Figure 5**). The Camballin Floodplain is listed in the Directory of Important Wetlands of Australia (DIWA WA017) and has been nominated for listing as a wetland of international significance under the Ramsar Convention (Place ID 18366; Department of Environment and Conservation [DEC] 2009). Its significance is due to the paucity of floodplains in the Kimberley region, usage of the site by migratory waterbirds and because it contains many sites of significance to the local Aboriginal people. Le Lievre Swamp (Iljamalkarda in the local dialect) is crucial to the hydrology of the floodplain and interacts with the regional groundwater system (DEC 2009).

The Project Area is not located within any Commonwealth or State listed Conservation reserves or Department of Biodiversity, Conservation and Attractions (DBCA) managed lands. A total of two nature reserves occur within 50 km of the Project Area, namely Tunnel Creek National Park and Devonian Reef Conservation Park, located 49.3 km and 42.8 km northwest of the Project Area, respectively (**Figure 5**).

3. Methodology

3.1. Desktop review

3.1.1. Database searches and literature review

The following Commonwealth and State databases were searched for information relation to conservation listed flora, fauna and ecological communities in order to compile and summarise existing data to inform the field survey. Database searches undertaken around the central coordinates 706862 metres (m) E; 7981169m N are provided in **Table 5** below. Applied buffers below are considered suitable based on flora and fauna assemblages expected to occur within the Project Area.

Table 5: Database searches undertaken for the Project Area

Database	Reference	Buffer (km)
Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) Protected Matters Search Tool (PMST) for Threatened species and communities listed under the EPBC Act.	DAWE 2021b	30
DBCA and Western Australian Herbarium (WAH) NatureMap online database.	DBCA 2007-2021	30
DBCA Threatened and Priority flora database searches for Declared Rare Flora (DRF) listed under the latest WA Wildlife Conservation (Rare Flora) Notice and Priority Flora.	DBCA 2021a	100
DBCA Threatened and Priority fauna database searches for Scheduled fauna listed under the EPBC Act or latest WA Wildlife Conservation (Specially Protected Fauna) Notice and Priority Fauna.	DBCA 2021b	80
DBCA Threatened and Priority Ecological Communities' database search	DBCA 2021c	50

In addition, the following documents pertaining to the Project Area were reviewed for conservation significant flora and fauna species and ecological communities:

- *Ophir, Paradise, Valhalla, Eden and Ellendale Flora, Vegetation and Fauna Survey Report* (Buru Energy and Outback Ecology 2014);
- *Level 1 Vegetation, Flora and Fauna Survey of Kurrajong, Yakka Munga and Valhalla Central Well Sites* (ELA 2016);
- *Valhalla Central 4 Flora and Fauna Survey* (ELA 2018);
- *Flora and Vegetation Survey: Valhalla North* (Low Ecological Services 2011a)
- *Valhalla East-1 Exploration Well: Flora and Fauna Survey* (Low Ecological Services 2011b);
- *Asgard-1 Exploration Well: Flora, Vegetation and Fauna Survey* (Low Ecological Services 2012a);
- *Asgard 2D Seismic Survey: Flora, Vegetation and Fauna Survey* (Low Ecological Services 2012b);
- *Flora and Fauna Assessment – Odin 2D and 3D seismic survey, Fitzroy Basin, Western Australia* (Low Ecological Services 2020);
- *Targeted bilby survey of proposed well site 'Valhalla Central', and immediate area* (Murdoch University 2016); and
- *Valhalla – 01 Well Site Flora and Vegetation Survey* (Woodman Environmental Consulting 2007).

3.1.2. Likelihood of occurrence assessment

A pre-survey likelihood of occurrence assessment was undertaken to identify conservation listed flora and fauna species that possibly occur within the Project Area, identified from a review of key datasets and literature, as specified above. Following the field survey, the pre-survey likelihood of occurrence assessment was reassessed based on results of the field survey (availability of suitable habitat). Aquatic and marine species were not considered in the likelihood of occurrence assessment as the Project Area does not contain core habitat that these species solely rely on for survival. Conservation codes, categories and criteria for flora and fauna protected under the EPBC Act and the State *Biodiversity Conservation Act 2016* (BC Act) are provided in **Appendix A**. Criteria used for this assessment is presented in **Appendix B**.

3.2. Field survey

3.2.1. Survey team and timing

A Detailed and Targeted flora and vegetation survey and a Basic fauna survey were conducted by Jeff Cargill (Senior Botanist), Emily Chetwin (Botanist), Jeni Morris (Ecologist) and Briana Wingfield (Ecologist) from 3 to 10 March 2021. An additional supplementary survey was undertaken by Emily Chetwin and Jeni Morris from 25-27 May 2021. The survey team's relevant qualifications, experience and licences are provided in **Table 6** below. There was 2.4 mm of rainfall recorded during the field survey in March (BoM 2021). No rainfall was recorded during the May field survey (BoM 2021).

Table 6: Survey team

Name	Qualification	Relevant experience	Licences
Dr. Jeffry Cargill	BSc. Hons. PhD Environmental Sciences	Jeff has more than 12 years' experience in botanical and ecological studies throughout Western Australia including baseline vegetation studies (Reconnaissance and Detailed surveys), Targeted Threatened and Priority flora surveys, fauna and black cockatoo surveys, MNES surveys, environmental risk assessments and rehabilitation and vegetation monitoring programs.	Flora scientific collection licence: FB62000138 Declared Rare Flora (DRF) permit: TFL 48-1920
Emily Chetwin	BSc Geology. Masters. Hons.	Emily is a botanist with over three years' experience undertaking flora and vegetation across multiple bioregions of Western Australia. She has conducted Detailed and Reconnaissance baseline flora and vegetation surveys, targeted Threatened species surveys, rehabilitation and vegetation monitoring and assessment, habitat assessments and bushland condition assessments.	Flora scientific collection licence: FB62000026-3 Declared Rare Flora (DRF) permit: TFL 124-2021
Jeni Morris	BSc Conservation and Wildlife Biology	Jeni has over six years' undertaking ecological survey and monitoring in Western Australia. She is competent in undertaking Baseline flora and fauna surveys and Targeted species surveys and has experience leading field teams in remote areas. Jeni has been undertaking flora and fauna surveys for mining and infrastructure in the Kimberley region since 2016.	Flora scientific collection licence: FB62000070 Declared Rare Flora (DRF) permit: TFL 13-1920
Briana Wingfield	BSc. Conservation and Wildlife Biology and Environmental Science (Hons)	Briana has seven years' experience conducting fauna surveys across multiple bioregions within Western Australia, including Detailed, Targeted and Basic fauna surveys and black cockatoo habitat assessments.	Flora scientific collection licence: FB62000316

3.2.2. Flora and vegetation survey

A Detailed and Targeted flora and vegetation survey was conducted in accordance with the EPA *Technical Guidance: Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA 2016). A total of 64 quadrats were established within the Project Area (**Figure 6**). Dominant vegetation communities were described, with respect to dominant species, structure and overall condition. The survey involved the use of 50 x 50 m quadrats as recommended for the Dampierland bioregion (EPA

2016). Opportunistic sampling of species not recorded within the quadrats was undertaken where appropriate to supplement the existing list of species recorded from within the Project Area.

Photographs were taken from the northwest corner of each quadrat facing south-east. Within each quadrat, the following data was recorded:

- Site details (site name, site number, observers, date and location);
- Environmental information including landform, soil type and colour, bare ground and leaf litter cover, rock outcropping and time since last fire event; and
- Biological information including vegetation structure, vegetation condition in accordance with Keighery (1994), degree of disturbance, species present and species percentage cover.

A Targeted survey was completed within the Project Area to identify the following:

- TECs listed under the EPBC Act;
- Threatened (Declared Rare) Flora listed under the latest WA Wildlife Conservation (Rare Flora) Notice under the BC Act;
- Priority Ecological Communities (PECs) endorsed by the Western Australian Minister for the Environment;
- Priority (P) flora recognised by DBCA;
- Location of any culturally significant / Aboriginal significant bush foods; and
- Identification of the presence and extent of introduced flora (weed) species.

Where possible, field personnel walked meandering transects across suitable habitat within the Project Area to search for conservation significant flora species, with transects spaced apart depending on factors such as habitat type, disturbance (e.g. tracks) and landform. Due to access restrictions, not all of the Project Area was able to be traversed on foot. Survey limitations are discussed further in Section 3.2.6 below. Locations of survey transects are shown in **Figure 6** below. Flora species able to be identified in the field were recorded, and voucher specimens of unfamiliar species were collected for later identification. All collections were assigned a unique collecting number. For conservation significant flora species identified in the field, the following was recorded:

- A colour photograph;
- GPS location;
- Population size estimate;
- Location of population boundaries;
- Associated habitat/landscape element;
- Time and date observed;
- Observer details; and
- A voucher specimen suitable for use as a reference specimen (if appropriate to do so for conservation significant flora).

When conservation significant species were encountered the coordinates of individuals, and/or centroid of populations greater than 100, was recorded within a 20 m radial circumference. If a population extended outside of the Project Area individual were counted. Other information recorded includes the number of individuals and percentage of cover.

Specimen identification was undertaken by ELA Taxonomist Daniel Brassington. Species identification utilised taxonomic literature and keys and where required specimens were confirmed using the WAH reference collection. Suitable material that meets WAH specimen lodgement requirements, such as flowering material and range extensions, will be submitted along with Threatened and Priority Report forms to DBCA, as required by conditions of collection licences issued under the BC Act.

3.2.3. Data analysis

3.2.3.1. Flora species accumulation curve

A flora species accumulation curve was undertaken to indicate adequacy of the survey effort. As the number of survey sites increases, and correspondingly the size of the area surveyed increases, there should be a diminishing number of new species recorded. At some point, the number of new species recorded becomes essentially asymptotic. The asymptotic value was determined using Michaelis-Menten modelling and provided an incidence-based coverage estimator of species richness. When the number of new species being recorded for survey effort expended approaches this asymptotic value, the survey effort can be considered adequate.

3.2.3.2. Vegetation communities

Plymouth Routines in Multivariate Ecological Research v6 (PRIMER) statistical analysis software was used to analyse species-by-site data and discriminate survey sites based on their species composition (Clarke and Gorley 2006). A 4^{th} root transformation was applied to the percentage cover dataset to down weight the relative contributions of quantitatively dominant species. Specimens not identified to species level and singletons (species recorded at a single quadrat and not forming a dominant structural component) were excluded from the data set prior to analysis. Computation of similarity matrices was based on the Bray-Curtis similarity measure. Data were analysed using a series of multivariate analysis routines including Hierarchical Clustering (CLUSTER), Similarity Profile Analysis (SIMPROF) and Similarity Percentages (SIMPER). Results were used to inform and support interpretation of aerial photography and delineation of individual plant communities.

3.2.4. Fauna survey

The Basic fauna survey was conducted in accordance with the EPA *Technical Guidance: Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment* (EPA 2020). Broad habitat types within the Project Area were identified and described, and included the following information (where applicable):

- A colour photograph of representative habitat;
- Location of habitat type (GPS location where practical);
- Associated vegetation;
- Associated fauna species observed;
- Likely fauna of conservation significance to be hosted (based on immediate impressions);
- Habitat description, such as:
    - Hollow bearing trees and stag trees (average size and abundance);
    - Rocky outcrops (average rock size and extent);
    - Course woody debris, i.e. logs and fallen timber (abundance and size);
    - Substrate (description of composition, presence of algal crust and % cover of leaf litter);

  - Presence of wetland habitats and watercourses, including drainage lines, billabongs, active floodplains, dams, etc.; and
  - Any nests, roosts or other evidence of breeding habitat present; and
- Habitat condition and evidence of disturbance.

Fauna species were recorded opportunistically within the Project Area, and where possible meandering transects were conducted across suitable habitat to survey for conservation significant fauna and habitat supporting these species. Due to access restrictions, not all of the Project Area was able to be traversed on foot. Survey limitations are discussed further in Section 3.2.6 below. Locations of survey transects are shown in **Figure 6** below. Evidence recorded during searches included both direct evidence (vertebrate fauna seen or heard) and indirect (scats, tracks, dead specimens or burrows etc.). Opportunistic observations were also made between survey sites, including opportunistic observations of invertebrate species.

Habitats specifically supporting conservation significant fauna species likely to occur in the Project Area were targeted during the field survey and, where this habitat was identified, an estimate of extent and location boundaries was recorded. For any conservation significant fauna identified in the field, the following information was recorded:

- GPS locations;
- Estimated number of individuals observed, or estimated age of evidence observed;
- Associated habitat/landscape element;
- Time and date observed; and
- Observer details.

Identification of fauna species was undertaken by Jeni Morris and Briana Wingfield in the field. If any species were unable to be identified, photographs were taken when possible and were identified at a later date.

3.2.5. Nomenclature

Nomenclature used for the flora species within this report follows the WA Plant Census as available on FloraBase (DBCA and WAH 2021).

Nomenclature used for the vertebrate fauna species within this report follows the Western Australian Museum (WAM) Checklist of the Vertebrates of Western Australia, as available on the WAM website (WAM 2021). Where common names were not stated for certain species, the following references were consulted:

- Amphibians: Tyler and Doughty (2009);
- Reptiles: Wilson and Swan (2013);
- Birds: Morcombe (2003); and
- Mammals: Menkhorst and Knight (2011).

3.2.6. Limitations

The EPA *Technical Guide – Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA 2016) recommends including discussion of the constraints and limitations of the survey methods used.

Constraints and limitations for the Reconnaissance flora and vegetation survey and the Basic fauna survey are summarised in **Table 7** below. Three potential constraints were identified.

Table 7: Survey limitations

Constraint	Limitations
Sources of information and availability of contextual information (i.e. pre-existing background versus new material).	**Not a constraint**: Broad-scale vegetation mapping at a scale of 1:1,000,000 was available. Land system mapping at a scale of 1:2,000,000 and soil and landform mapping was also available. A number of relevant background reports, undertaken in the vicinity of the Project Area, were available. Available information was sufficient for the purposes of the work being undertaken and as such sources of information were not considered a major limitation.
Scope (i.e. what life forms, etc., were sampled).	**Potential constraint**: The survey requirement of a Targeted level flora survey was unable to be adequately met within all sections of the Project Area due to access restrictions, namely inaccessible (non-existent, overgrown or inundated) tracks. Foot traverses were undertaken where possible (and safe) to do so. Based on the desktop assessment (database searches and literature review) and a detailed post-survey flora likelihood of occurrence assessment based on detailed vegetation mapping and site characteristics, no Threatened flora species are considered as being likely or having the potential to occur within the Project Area. The survey requirement of a Targeted level fauna survey was unable to be adequately met within all sections of the Project Area due to access restrictions (above). Foot traverses were undertaken within appropriate habitat where possible (and safe) to do so. Of note, not all areas considered as potentially suitable to sustain populations of the Greater Bilby (*Macrotis lagotis*) were able to be traversed on foot. Secondary signs of this species were recorded within Fauna habitat 2 and, as such, this species is considered as being likely to occur throughout this habitat, which was mapped across an extent of 38.12 ha (29.75%) of the Project Area. In addition, a total of seven Threatened bird species are also considered as having the potential to occur within the Project Area. Due to the vagrant and mobile nature of these species, their likelihoods of occurrence are based on availability of potentially suitable habitat within the Project Area. The survey requirement of a Detailed level flora and vegetation survey and a Basic fauna survey within the Project Area was adequately met.
Intensity of survey	**Potential constraint:** The number of quadrats established was sufficient to determine the vegetation communities present within the Project Area (with a minimum of three quadrats established per vegetation community) and also identify possible vegetation communities of significance. Targeted survey for conservation significant flora and fauna species was unable to be completed within all sections of the Project Area due to access restrictions, however foot traverses were undertaken within appropriate habitat where possible (and safe) to do so. A conservative approach was undertaken to conservation listed flora and fauna species likelihood of occurrences within the Project Area, and this was informed through the desktop assessment process, on-ground vegetation/habitat mapping and opportunistic observations in the field.
Proportion of flora collected and identified (based on sampling, timing and intensity).	**Not a constraint**. Proportion of flora species collected was adequate to meet the requirements of the level of survey undertaken (Detailed level flora and vegetation survey), with approximately 91.7% of the flora species potentially present within the Project Area recorded. This high percentage reflects the common occurrence of key species across the landscape, which co-occur at varying levels of structural and compositional dominance; this point is reflected in vegetation community descriptions whereby subtle variations in the dominance of common species largely define the communities.
Mapping reliability.	**Not a constraint**. Delineation and mapping of vegetation communities was adequate based on requirements of a Detailed level vegetation survey. High quality aerial imagery was used for both the field survey and subsequent vegetation mapping. It is noted that fire scars are

Constraint	Limitations
	present across much of the Project Area, however this did not limit the ability to accurately delineate vegetation communities present. Mapping was undertaken based on results of statistical analysis on data and through interpretation of aerial photography and field notes.
Timing, weather, season, cycle	**Not a constraint:** The Project Area is located in the Northern botanical province of Western Australia. Recommended survey timing for this region includes the wet season (January – March) and post-wet season for flora (EPA 2016) and in the season following maximum rainfall for fauna (EPA 2020). The initial field survey was undertaken in season from 3-10 March 2021. A supplementary field survey, undertaken following amendments to the original Project Area boundary, was completed from 25-27 May 2021. Rainfall in the three months preceding both survey periods was above average (March; 756 mm compared to an average of 521.1 mm; May; 370.4 mm compared to an average of 312.5 mm; BoM 2021). As such, both field survey periods were considered suitable for identification of annual and cryptic perennial flora species.
Disturbances	**Not a constraint:** The Project Area traverses a large area and incorporates several disturbances, including pastoral activities (e.g. cattle grazing, tracks and congregating around water points), weeds, clearing/tracks and edge effects from main tracks. Large sections of the Project Area had been previously cleared for pastoral access (tracks) and were found to be in various stages of regrowth. The Project Area also had prevalence of fire with many areas being recently burnt, particularly preceding the field survey in May. These disturbances did not hinder the ability to determine vegetation communities within the Project Area, with the average number of species in quadrats established during the May field survey comparable to the average number established during the May field survey (25 species compared to 28 species, respectively).
Resources	**Not a constraint:** The personnel conducting this field survey were both suitably qualified to identify flora and fauna specimens in the Northern botanical province, having previously undertaken work in this region.
Accessibility	**Potential constraint:** Sections of the Project Area were unable to be accessed during the March field survey due to overgrown and inaccessible vehicle tracks. These areas were re-visited during the May field survey by helicopter in order to establish quadrats for vegetation community and condition mapping, however, were unable to be traversed on foot to undertake targeted searches due to large distances, posing a safety risk for field staff.
Experience levels (e.g. degree of expertise in plant identification to taxon level).	**Not a constraint**. The personnel conducting this field survey were both suitably qualified to identify specimens, having previously undertaken flora and fauna surveys within the Dampierland bioregion of Western Australia.

4.1.2. Pre-survey likelihood of occurrence of conservation significant flora, fauna and ecological communities

A pre-survey likelihood of occurrence assessment was undertaken to identify conservation listed flora and fauna species that possibly occur within the Project Area, identified from a review of key datasets and literature, as described in Section 3.1.1 above. A DBCA Threatened and Priority flora, fauna and ecological communities search (DBCA 2021a, 2021b, 2021c), PMST search (DAWE 2020b) and NatureMap search (DBCA 2007-2020) were conducted to identify conservation significant species and communities recorded within, or nearby to, the Project Area (current and historic). A review of previous reports relevant to the Project Area, as outlined in Section 3.1.1, was also completed.

Based on the pre-survey likelihood of occurrence assessment, an initial 35 conservation listed flora species, 54 conservation listed fauna species and three PECs were identified as possibly occurring within the Project Area.

Conservation significant flora species identified from the pre-survey likelihood of occurrence assessment include 16 species listed as P1 by DBCA, four species listed as P2 by DBCA and 15 species listed as P3 by DBCA. Of these, one species (*Goodenia byrnesii*; P3) was considered as being likely to occur within the Project Area, while a further nine flora species were considered as having the potential to occur within the Project Area, based on the presence of nearby recent records and availability of potentially suitable habitat. The remaining 25 flora species were considered as either unlikely (24 species) or not occurring (one species). The flora likelihood of occurrence assessment is presented in **Appendix C**.

Conservation significant fauna species identified from the pre-survey likelihood of occurrence assessment include 32 species listed as Threatened under the EPBC Act and BC Act, two species listed as Threatened under the EPBC Act and as Priority by DBCA, three species listed as Threatened under the BC Act, two species listed as specially protected under the BC Act and 15 species listed as Priority by DBCA. Of these, one species (*Macrotis lagotis*; Greater Bilby; listed as Vulnerable [VU] under the EPBC Act and BC Act) was considered as being likely to occur within the Project Area, while a further 29 fauna species were considered as having the potential to occur within the Project Area, based on the presence of nearby recent records and availability of potentially suitable habitat. The remaining 24 fauna species were considered as unlikely to occur. The fauna likelihood of occurrence assessment is presented in **Appendix D**.

A total of three conservation significant ecological communities were identified from the desktop assessment, all of which were considered as having the potential to occur pre-survey:

- Kimberley Vegetation Association 760, described as 'shrublands, pindan; Acacia tumida shrubland with scattered low bloodwood & *Eucalyptus setosa* (excluded name) over ribbon & curly spinifex' (Priority 1, located approximately 20 km to the east of the Project Area; DBCA 2021c);
- Kimberley Vegetation Association 759, described as 'grasslands, tall bunch grass savanna woodland, coolabah over ribbon/blue grass (*Bothriochloa* spp.)' (Priority 3; located approximately 27 km to the west of the Project Area; DBCA 2021c); and

- Leopold Land System, described as ‘cracking clay plains and marginal outcrop alluvial plains, grasslands and very open grassy woodlands’ (Priority 3; located approximately 46 km to the east of the Project Area; DBCA 2021c).

Conservation significant flora and ecological communities and fauna species previously recorded within, and in proximity to the Project Area from DBCA database searches are presented in **Figure 7** and **Figure 8** respectively.

4.2. Flora and vegetation survey

4.2.1. Flora overview

A total of 235 flora species representing 54 families and 130 genera were recorded from the 64 quadrats established within the Project Area. Average species richness per quadrat was 27 species, ranging from a low of 7 species in ELA57 to a high of 53 species in ELA39. Families with the highest number of species included Fabaceae (42 species), Poaceae (40 species) and Malvaceae (18 species). *Acacia* was the best represented genus throughout the Project Area with seven taxa recorded. A full species by site matrix is provided in **Appendix E**. Quadrat site data is presented in **Appendix F**. Floristic quadrat data and site photos are presented in **Appendix G** and **Appendix H**.

4.2.2. Accumulated species- sites surveyed (species-area curve)

A species accumulation curve was used to evaluate the adequacy of sampling. Only species data recorded from defined quadrats were used; no opportunistic flora collections were included. The asymptotic value was determined using Michaelis Menten modelling. Using this analysis, the incidence-based coverage estimator of species richness was calculated to be 256.31. Based on this value, and the total of 235 species recorded within the 64 quadrats, approximately 91.7% of the flora species potentially present within the Project Area were recorded. This high percentage indicates that a suitable proportion of flora potentially present within the Project Area were recorded, reflecting the common occurrence of key species across the landscape, which co-occur at varying levels of structural and compositional dominance. This point is further reflected in vegetation community descriptions whereby subtle variations in the dominance of common species largely define the communities.

4.2.3. Conservation significant flora

One conservation significant flora species, *Nymphoides beaglensis*, listed by DBCA as P3 was identified during the field survey as occurring within the Project Area, namely within the Additional Survey Area (**Figure 9**). This species was recorded from eight point-locations totalling 112 individuals. Individuals were found occurring within inundated areas and were flowering at the time of the field survey (**Plate 1**).

Plate 1: *Nymphoides beaglensis* (P3) recorded within the Project Area © Eco Logical 2021

Of the 35 conservation significant flora species identified from the pre-survey likelihood of occurrence assessment as possibly occurring within the Project Area, *Nymphoides beaglensis* was the only species recorded. Based on the post-survey likelihood of occurrence assessment, two of the remaining 34 flora conservation listed species are considered as being likely to occur within the Project Area, namely *Goodenia byrnesii* (P3) and *Goodenia sepalosa* var. *glandulosa* (P3). This assessment is based on the presence of suitable habitat within the Project Area for these species, and due to the presence of nearby recent records. An additional four species are considered as having the potential to occur within the Project Area, based on the presence of marginally suitable habitat and close proximity of previous records. A total of 27 flora species are considered as being unlikely to occur and one species, *Phyllanthus fuernrohrii* (P3), has been previously misidentified and therefore is considered as not occurring within the Project Area. The full flora likelihood of occurrence assessment is provided in **Appendix C**.

4.2.4. Range extensions

Four species were recorded within the Project Area as representing range extensions (RE), namely *Cajanus latisepalus*, *Lindernia chrysoplectra, Lindernia clausa* and *Tephrosia remotiflora*.

Cajanus latisepalus is currently known from 60 records in WA, over a range of approximately 500 km from Meda in the west across to the Northern Territory (NT) border in the east (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA29, within the AgBc vegetation community on moist light brown clay loam flats. This record represents a minor range extension of approximately 60 km to the southwest of the known range of this species.

Lindernia chrysoplectra is currently known from 12 records in WA, over a range of approximately 465 km from the Dampier Peninsula in the northwest to 180 km west of Sturt Creek in the southeast (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA64, within the CbEc vegetation community on waterlogged dark brown sandy clay on open depression. This record represents a range infill, joining the eastern and western populations of this species, with the closest records of this species approximately 170 km to the west and 150 km to the east-southeast of the Project Area.

Lindernia clausa is currently known from 22 records in WA, over a range of approximately 675 km from the Dampier Peninsula in the southwest to near Kununurra in the east (DBCA 2007-2021). Within the Project Area, this species was recorded from three quadrat locations; ELA26, ELA27 and ELA31, within the BcTc and Ag vegetation communities on moist brown clay on open depression. This record represents a range extension of approximately 110 km to the south of the known range of this species.

Tephrosia remotiflora is currently known from 53 records in WA, over a range of approximately 1,795 km from near Onslow in the south Kununurra and into the NT in the north (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA01, within the AgCgEc vegetation community on red brown sandy loam on a gentle slope. This record represents a minor range extension of approximately 65 km to the south of the known range of this species.

Locations of flora species recorded as range extensions within the Project Area is presented in **Figure 9**.

4.2.5. Introduced flora

A total of nine introduced flora (weed) species were recorded within the Project Area:

- **Calotropis procera* (Calotrope);
- **Cenchrus setiger* (Birdwood Grass);
- **Malvastrum americanum* (Spiked Malvastrum);
- **Melochia pyramidata* (Pyramid Flower);
- **Portulaca oleracea* (Common Purslane);
- **Portulaca pilosa* (Pink Purslane);
- **Stylosanthes hamata* (Verano Stylo);
- **Trianthema pilosum*; and
- **Vachellia farnesiana* (Mimosa Bush).

Of these species, **Calotropis procera* is listed as a Declared Pest – s22(2) under the State *Biosecurity and Agriculture Management Act 2007* (BAM Act). Declared Pests "must satisfy any applicable import requirements when imported and may be subject to an import permit if they are potential carriers of high-risk organisms. They may also be subject to control and keeping requirements once within Western Australia" (DPIRD 2021b). **Calotropis procera* was recorded from within five quadrats in the Project Area, namely ELA20, ELA33, ELA35, ELA59 and ELA60 (**Plate 2**). Of the remaining eight introduced (weed) species, all are classified under the BAM Act (2007) as permitted (s11) for the whole state and not assigned any control category for a local government area at this time. **Stylosanthes hamata* and **Portulaca pilosa* were the most commonly recorded weed species, recorded at 18 and 13 quadrats, respectively. Locations of weeds within the Project Area is provided in **Appendix I**.

Plate 2: ****Calotropis procera* (Calotrope), listed as a Declared Pest – s22(2) under the BAM Act, recorded within the Project Area

4.2.6. Vegetation communities

A total of 13 vegetation communities were delineated and mapped within the Project Area (**Appendix J**). Vegetation community CgAgBc was the most widespread across the Project Area, covering 20.05 ha (15.64% of the Project Area; **Table 9**; **Figure 10**).

Table 9: Vegetation communities recorded within the Project Area

4.2.7. Vegetation of conservation significance

None of the vegetation associations delineated within the Project Area were inferred to represent any known or potential conservation significant communities listed under the EPBC Act, the BC Act or by DBCA. A DBCA Threatened and Priority Communities database search (DBCA 2018c) identified three known occurrences of PECs within 50 km of the Project Area, namely the Kimberley Vegetation Association 760 (listed as P1), described as 'shrublands, pindan; *Acacia tumida* shrubland with scattered low bloodwood & *Eucalyptus setosa* (excluded name) over ribbon & curly spinifex', the Kimberley Vegetation Association 759 (listed as P3), described as 'grasslands, tall bunch grass savanna woodland, coolabah over ribbon/blue grass (*Bothriochloa* spp.)' and the Leopold Land System (listed as P3), described as 'cracking clay plains and marginal outcrop alluvial plains, grasslands and very open grassy woodlands'. None of the 13 vegetation associations delineated within the Project Area are inferred as representing these PECs.

4.2.8. Vegetation condition

Vegetation recorded within the Project Area ranged from Excellent to Poor based on the vegetation condition scale adapted from Keighery (1994) and Trudgen (1988) provided in the EPA *Technical Guidance: Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA 2016; **Table 10**). Majority of the vegetation within the Project Area was classed as Very Good (69.93 ha; 54.57% of the Project Area) and Excellent (45.28 ha; 35.34% of the Project Area; **Figure 11**). Disturbances within the Project Area included impacts from pastoral activities (e.g. cattle grazing, scats and tracks), previous clearing and adjacent tracks which facilitate edge effects and minor weed invasion. The Project Area also has prevalence of fire with many areas being recently burnt across the landscape, particularly preceding the field survey in May.

Table 10: Vegetation condition within the Project Area

Vegetation condition	Extent (ha) within the Disturbance Footprint (% total)	Extent (ha) within the Additional Survey Area (% total)	Total extent (ha) within the Project Area (% total)
Excellent	38.89 (34.58)	6.40 (40.76)	45.28 (35.34)
Very Good	62.48 (55.56)	7.45 (47.50)	69.93 (54.57)
Good	8.84 (7.86)	1.84 (11.73)	10.68 (8.34)
Poor	2.25 (2)	0 (0)	2.25 (1.75)
Degraded	0 (0)	0 (0)	0 (0)
Completely Degraded	0 (0)	0 (0)	0 (0)
Total	**112.46 (100)**	**15.69 (100)**	**128.15 (100)**

4.3. Fauna survey

4.3.1. Fauna habitats

A total of three broad fauna habitat types were mapped across the Project Area. These fauna habitats align with vegetation communities described in Section 4.2.6 above. Fauna habitat 1 was the most common within the Project Area, occurring across 81.86 ha (63.88%) of the Project Area. Fauna habitats are described in **Table 11** and presented in **Figure 12** below.

Table 11: Fauna habitat of the Project Area

Fauna habitat description	Associated vegetation community	Extent (ha) within the Disturbance Footprint (% total)	Extent (ha) within the Additional Survey Area (% total)	Total extent (ha) within the Project Area (% total)
Fauna habitat 1: Mixed open woodland over grassland on sandy clay flats and slopes	Ag, AgBc, AgCgEc, AtAcDo, BcCg, BcTc, CgAgBc	74.80 (66.52)	7.06 (44.69)	81.86 (63.88)
Fauna habitat 2: Mixed open woodland over tussock grasses on dune slopes and crests	BcGaCg, CgCzBc, CzEcCg, EcCg	34.73 (30.88)	3.39 (21.60)	38.12 (29.75)
Fauna habitat 3: Eucalypt open woodland and mixed shrubland on closed depression and creekline	CbEc, EmEcAg	2.92 (2.6)	5.25 (33.44)	8.17 (6.37)
Total		**112.46 (100)**	**15.69 (100)**	**128.15 (100)**

4.3.2. Fauna overview

A total of 75 fauna species were recorded during the field survey. This number comprised of 52 birds, five mammals, eight reptiles and ten invertebrates. Two introduced fauna species, European Cattle (**Bos indicus*) and Dingo (**Canis familiaris dingo*), were directly observed in the Project Area. A full fauna species list is presented in **Appendix K**.

4.3.3. Conservation significant fauna

One fauna species of conservation significance was recorded within the Project Area; namely the Greater Bilby (*Macrotis lagotis*), listed as VU under the EPBC Act and BC Act. Evidence of this species in the form of diggings was recorded at four locations in the south-east of the Project Area within Fauna habitat 2 (**Table 12**; **Figure 13**). Greater Bilby diggings have a conical shape, which is a distinguishing feature of this species (Moseby *et al*. 2012, DSEWPaC 2011). Diggings were relatively fresh and intact (i.e. had not completely collapsed or washed away) and estimated to be less than one year old. No direct observations of this species were made.

Table 12: *Macrotis lagotis* (Greater Bilby) diggings recorded within the Project Area

Species	Conservation listing		Observation type	Coordinates		Photo
	EPBC Act	BC Act		Easting	Northing	
Macrotis lagotis (Greater Bilby)	VU	VU	Digging	716952	7976430	
Macrotis lagotis (Greater Bilby)	VU	VU	Digging	716839	7976443	

Species	Conservation listing		Observation type	Coordinates		Photo
	EPBC Act	BC Act		Easting	Northing	
Macrotis lagotis (Greater Bilby)	VU	VU	Digging	708708	7981144	
Macrotis lagotis (Greater Bilby)	VU	VU	Digging	708741	7979737	

Of the initial 54 conservation listed fauna species identified from the pre-likelihood of occurrence survey assessment as possibly occurring within the Project Area, *Macrotis lagotis* (Greater Bilby) was the only species recorded within the Project Area. Of the remaining 53 species, nine of these are considered as having the potential to occur post-survey, based on proximity of previous records to the Project Area and availability of suitable habitat within the Project Area:

- *Erythrura gouldiae* (Gouldian Finch; listed as Endangered [EN] under the EPBC Act and as P4 by DBCA);
- *Falco hypoleucos* (Grey Falcon; listed as VU under the EPBC Act and BC Act);
- *Actitis hypoleucos* (Common Sandpiper; listed as Migratory [M] under EPBC Act and BC Act);
- *Apus pacificus* (Fork-tailed swift; listed as M under EPBC Act and BC Act);
- *Calidris acuminata* (Sharp-tailed sandpiper; listed as M under EPBC Act and BC Act);
- *Plegadis falcinellus* (Glossy ibis; listed as M under the EPBC Act and BC Act).
- *Falco peregrinus* (Peregrine falcon; listed as Other specially protected species [OS] under BC Act);
- *Ctenotus uber johnstonii* (Spotted ctenotus (northeast); listed as P2 by DBCA); and
- *Leggadina lakedownensis* (Northern short-tailed mouse; listed as P4 by DBCA).

Of these, six species are vagrant and / or mobile migratory bird species, which may utilise habitat within the Project Area only when conditions are favourable (e.g. after periods of heavy rainfall).

Of the remaining 44 species identified from the desktop assessment as possibly occurring within the Project Area, all are considered as unlikely to occur within the Project Area based on lack of suitable habitat present and nearby recent records of these species. The fauna likelihood of occurrence assessment is presented in **Appendix D**.

4.4. Aboriginal significant bush foods

Two Aboriginal significant bush food (flora) species were recorded within the Project Area, namely *Adansonia gregorii* (Boab) and *Carissa lanceolata* (Conkerberry). *Adansonia gregorii* was recorded as a dominant or associated species within five of the 14 vegetation communities described, at a <5% cover (AgCgEc, EmEcAg, CgAgBc, AgBc, Ag). Of note was one particularly large tree occurring across a portion of the track leading to the Midgard well site (m 685634E; m 7992864N). This tree was estimated to have a diameter of between 5 and 6 m. *Carissa lanceolata* was recorded as a dominant or associated species within ten of the 14 vegetation communities described, at a <5% cover (AgCgEc, EmEcAg, CgAgBc, CgCzBc, AgBc, BcCg, AtAcDo, AtAcDo, BcGaCg, EcCg).

Three Aboriginal significant bush food (fauna) species were recorded within the Project Area, namely *Ardeotis australis* (Australian Bustard), *Osphranter rufus* (Red Kangaroo), *Varanus gouldii* (Sand Goanna) and *V. panoptes* (Yellow-spotted Monitor). Australian Bustard was recorded from one location within the Project Area (m 683743E; m 7992977 N). Red Kangaroo was recorded from scats throughout the Project Area and spotted in the distance at various locations. Sand Goanna and Yellow-spotted Monitor were spotted several times sunbaking along tracks within and adjacent to the Project Area.

5. Discussion

5.1. Flora and vegetation

5.1.1. Flora overview

A total of 235 flora species representing 54 families and 130 genera were recorded from the 64 quadrats established within the Project Area. Average species richness per quadrat was 27 species, ranging from a low of 7 species in ELA57 to a high of 53 species in ELA39. A species accumulation curve determined that the number of flora species recorded represents approximately 91.7% of the species potentially present within the Project Area. This high percentage indicates that a suitable proportion of flora potentially present within the Project Area were recorded, reflecting the common occurrence of key species across the landscape, which co-occur at varying levels of structural and compositional dominance. This number is also greater than that recorded from Reconnaissance level studies in the region conducted in 2012 (Low Ecological Services 2012b; 150 flora species recorded) and 2020 (Low Ecological Services 2020; 97 flora species recorded), who recorded a similar suite of species in their respective studies.

5.1.2. Conservation significant flora

No Threatened flora listed under the EPBC Act or the BC Act were recorded within the Project Area. These findings are consistent with results from the desktop review undertaken for the Project Area, which included a review of Commonwealth and State database searches and previous relevant studies in the region (Section 4.1), with no Threatened flora species recorded or identified as likely to occur in the local region from this review.

One Priority flora species, *Nymphoides beaglensis* (listed as P3 by DBCA), was recorded within the Project Area. Priority 3 species are poorly known species in need of further survey (**Appendix A**). *Nymphoides beaglensis* is an annual aquatic herb with white to pink and purple flowers from March to June (DBCA and WAH 2021). It is known from 20 records over a range of approximately 475 km from Roebuck in the southwest to the Mitchell Plateau in the northeast, with the nearest known record located approximately 38 km northwest of the Project Area (DBCA 2007-2021). The species is known to occur in shallow fresh water at the edges of permanent waterholes or in seasonally inundated claypans and depressions (DBCA and WAH 2021). Within the Project Area, *Nymphoides beaglensis* was recorded from eight point-locations totalling 112 individuals, all of which were found within seasonally inundated depressions within the CbEc vegetation community in the Additional Survey Area. This species was flowering at the time of the field survey in March.

Of the 35 conservation significant flora species identified from the pre-survey likelihood of occurrence assessment as possibly occurring within the Project Area, *Nymphoides beaglensis* was the only species recorded. Based on the post-survey likelihood of occurrence assessment, two of the remining 34 conservation significant flora species are considered as being likely to occur within the Project Area, namely *Goodenia byrnesii* (P3) and *Goodenia sepalosa* var. *glandulosa* (P3). *Goodenia byrnesii* is considered as likely to occur due to the presence of potentially suitable habitat and associated species occurring within the Project Area, e.g. sandy creek edges with *Bauhinia cunninghamii* scattered low trees and grasses (DBCA and WAH 2021). Known records of this species also occur within 1 km of the Project Area. *Goodenia sepalosa* var. *glandulosa* is considered as likely to occur due to the presence of

potentially suitable habitat and associated species occurring within the Project Area, e.g. red sand or loam with *Bauhinia cunninghamii* open woodland over *Acacia tumida* var. *tumida* tall shrubland (DBCA and WAH 2021). Known records of this species also occur approximately 15 km to the west of the Project Area.

Of note, *Trianthema kimberleyi* (P1), *Goodenia virgata* (P2) and *Triodia acutispicula* (P3) were identified as having been recorded within previous survey reports in the local area, as outlined in **Table 8** above. Suitable habitat for *Trianthema kimberleyi* does not occur within the Project Area (e.g. shistous soils). Although Low Ecological Services (2012b) recorded this species <10 km from the Project Area, known information suggests that this species occurs only on schistous soils, a soil type that was not recorded within the Project Area. Additionally, the single known WAH record of this species occurs >200 km to the southeast of the Project Area. Suitable habitat for *Goodenia virgata* does not occur within the Project Area (e.g. red sandy loam near salt pans). Although Woodman Environmental Consulting (2007) recorded this species approximately 5 km from the Project Area, known information suggests that this species occurs near salt lakes, a habitat type not found within the Project Area. Additionally, WAH records all occur well to the south and southeast (>400 km) and are associated with inland saltpans. Although marginal habitat may occur within the Project Area for *Triodia acutispicula* (e.g.Pindan plains), this species predominantly occurs on river levees and rocky hillslopes and outcrops (DBCA and WAH 2021). Although Woodman Environmental Consulting (2007) recorded this species <5 km from the Project Area, known information shows that the majority of populations occur well to the north (>300 km from the Project Area). The nearest WAH record occurs >200 km to the north east at Mornington Camp. Based on current habitat information available for these species on Florabase (DBCA and WAH 2021), and from on-ground vegetation/habitat mapping, these three species are considered as being unlikely to occur within the bounds of the Project Area.

The post-survey likelihood of occurrence assessment identified an additional four species are considered as having the potential to occur within the Project Area, based on the presence of marginally suitable habitat and close proximity of previous records, namely *Heliotropium foveolatum* (P1), *Acacia monticola* x *tumida* var. *kulparn* (P3), *Corchorus fitzroyensis* (P3) and *Tephrosia pedleyi* (P3). A total of 27 flora species are considered as being unlikely to occur and one species, *Phyllanthus fuernrohrii* (P3), has been previously misidentified and therefore is considered as not occurring within the Project Area.

5.1.3. Range extensions

A total of four flora species were recorded as range extensions within the Project Area, namely *Cajanus latisepalus*, *Lindernia chrysoplectra*, *Lindernia clausa* and *Tephrosia remotiflora*.

Cajanus latisepalus is an erect, spindly shrub with yellow pea flowers from March to August (DBCA and WAH 2021). It is known to grow in sandy or gravelly soils, sandstone and basalt on sandplains and rocky slopes (DBCA and WAH 2021). *Cajanus latisepalus* is currently known from 60 records in WA, over a range of approximately 500 km from Meda in the west across to the Northern Territory (NT) border in the east (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA29, within the AgBc vegetation community on moist light brown clay loam flats. This record represents a minor range extension of approximately 60 km to the southwest of the known range of this species.

Lindernia chrysoplectra is a delicate, fleshy-stemmed annual herb 0.1-0.3 m high with purple and white flowers from March to August (DBCA and WAH 2021). It is known to grow in sandy soils in seasonally wet areas (DBCA and WAH 2021). *Lindernia chrysoplectra* is currently known from 12 records in WA, over a range of approximately 465 km from the Dampier Peninsula in the northwest to 180 km west of Sturt Creek in the southeast (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA64, within the CbEc vegetation community on waterlogged dark brown sandy clay on open depression. This record represents a range infill, joining the eastern and western populations of this species, with the closest records of this species approximately 170 km to the west and 150 km to the east-southeast of the Project Area.

Lindernia clausa is a slender, erect annual herb 3 to 35 centimetres (cm) high with blue/purple flowers from February to August (DBCA and WAH 2021). It is known to grow on sand or loam on floodplains, creeklines or seepage areas (DBCA and WAH 2021). *Lindernia clausa* is currently known from 22 records in WA, over a range of approximately 675 km from the Dampier Peninsula in the southwest to near Kununurra in the east (DBCA 2007-2021). Within the Project Area, this species was recorded from three quadrat locations; ELA26, ELA27 and ELA31, within the BcTc and Ag vegetation communities on moist brown clay on open depression. This record represents a range extension of approximately 110 km to the south of the known range of this species.

Tephrosia remotiflora is a prostrate or sprawling sericeous shrubs 15 to 60 cm high with pink/ to purple flowers from February to June or September. (DBCA and WAH 2021). It is known to grow in red sand and sandstone on sand dunes and pindan (DBCA and WAH 2021). *Tephrosia remotiflora* is currently known from 53 records in WA, over a range of approximately 1,795 km from near Onslow in the south Kununurra and into the NT in the north (DBCA 2007-2021). Within the Project Area, this species was recorded from one quadrat location; ELA01, within the AgCgEc vegetation community on red brown sandy loam on a gentle slope. This record represents a minor range extension of approximately 65 km to the south of the known range of this species.

5.1.4. Introduced flora (weed) species

A total of nine introduced flora (weed) species were recorded within the Project Area, namely **Calotropis procera* (Calotrope), **Cenchrus setiger* (Birdwood Grass); **Malvastrum americanum* (Spiked Malvastrum), **Melochia pyramidata* (Pyramid Flower), **Portulaca oleracea* (Common Purslane), **Portulaca pilosa* (Pink Purslane), **Stylosanthes hamata* (Verano Stylo), **Trianthema pilosum* and **Vachellia farnesiana* (Mimosa Bush). Of these, **Calotropis procera* is listed as a Declared Pest – s22(2) under the State *Biosecurity and Agriculture Management Act 2007* (BAM Act). Declared Pests "must satisfy any applicable import requirements when imported and may be subject to an import permit if they are potential carriers of high-risk organisms. They may also be subject to control and keeping requirements once within Western Australia" (DPIRD 2021b).

**Calotropis procera* is a perennial shrub to tree in the Apocynaceae family, growing up to 4 m tall with smooth pale grey-green stems and a white milky sap. Flowers are purple to white with five waxy petals (DPIRD 2021b). This species distributed over much of northern Australia, in particular in Queensland, northwest WA and in northern parts of the NT, and is spread be seed over long distances by wind or through water or mud sticking to animals or vehicles. Its preferred habitat is disturbed sites, thriving on poor soils, particularly where overgrazing has removed competition from native grasses (Atlas of Living

Australia [ALA] 2021). **Calotropis procera* was recorded from within five quadrats in the Project Area, namely ELA20, ELA33, ELA35, ELA59 and ELA60.

Of the remaining eight introduced (weed) species, all are classified under the BAM Act (2007) as permitted (s11) for the whole state and not assigned any control category for a local government area at this time. **Stylosanthes hamata* and **Portulaca pilosa* were the most common weed species, being recorded at 18 and 13 quadrats, respectively. Given the prevalence of disturbance due to pastoral activities in the region, there is likely to be additional weeds to those that were recorded during the survey.

5.1.5. Vegetation communities and condition

A total of 13 vegetation communities were delineated and mapped within the Project Area, generally comprising broad mixtures of of *Adansonia gregorii*, *Corymbia* and *Eucalyptus* spp., *Atalaya hemiglauca, Bauhinia cunninghamii* and *Erythrophleum chlorostachys* woodland over mixed *Acacia*, *Grevillea*, *Hakea* spp. shrubland over *Triodia* spp. hummock grassland and *Aristida*, *Eriachne*, *Eragrostis* and *Sorghum* spp. tussock grassland. Landforms recorded across the Project Area broadly comprised sandy clay to light clay flats and gentle slopes (Ag, AgBc, AgCgEc, AtAcDo, BcCg, BcTc, CgAgBc), dune slopes, crests and swales (BcGaCg, CgCzBc, CzEcCg, EcCg) and open depressions and creekline communities (CbEc, EmEcAg).

A DBCA Threatened and Priority Communities database search (DBCA 2018c) identified three known occurrences of PECs within 50 km of the Project Area, none of which were inferred to represent any known or potential conservation significant communities listed under the EPBC Act, the BC Act or by DBCA. These findings are consistent with results from the desktop review undertaken for the Project Area, which included a review of Commonwealth and State database searches and previous relevant studies in the region (Section 4.1), with no TECs or PECs recorded or identified as likely to occur in the local region from this review.

The Kimberley Vegetation Association 760, listed as P1, is described as 'shrublands, pindan; *Acacia tumida* shrubland with scattered low bloodwood & *Eucalyptus setosa* (excluded name) over ribbon & curly spinifex' (DBCA 2021d). This PEC is restricted to two areas associated with the Fitzroy River and Lennard River systems, located approximately 28 km to the west and 70 km to the north of the Project Area (DBCA 2021c). Species assemblages associated with the Kimberley Vegetation Association 760 PEC, as described above, were not identified within any of the 13 vegetation associations delineated within the Project Area.

The Kimberley Vegetation Association 759 (listed as P3), described as 'grasslands, tall bunch grass savanna woodland, coolabah over ribbon/blue grass (*Bothriochloa* spp.; DBCA 2021d). This PEC is restricted to two small patches located 23 km to the south and 68 km north-northeast of the Project Area (DBCA 2021c). Species assemblages associated with the Kimberley Vegetation Association 759 PEC, as described above, were not identified within any of the 13 vegetation associations delineated within the Project Area.

The Leopold Land System (listed as P3), described as 'cracking clay plains and marginal outcrop alluvial plains, grasslands and very open grassy woodlands' (DBCA 2021d). One patch of this PEC is located approximately 49 km to the east of the Project Area (DBCA 2021c). Landforms associated with the

Leopold Land System PEC (i.e. cracking clay plains and marginal outcrop alluvial plains) were not identified within the Project Area.

Vegetation communities mapped within the Project Area align with Beard's vegetation association mapping, as presented in Section 2.1.4 above. Vegetation communities Ag, AgBc, AgCgEc, AtAcDo, BcCg, BcGaCg, BcTc, CgAgBc, CgCzBc, EcCg and EmEcAg broadly comprise aspects of Beard's North Fitzroy Plains 64 and 710 vegetation associations with the presence of mixed hummock (*Triodia* spp.) and tussock grasslands, *Adansonia gregorii*, *Bauhinia cunninghamii* and ribbon grass (*Chrysopogon fallax*; Government of Western Australia 2019). Vegetation communities AgCgEc, CbEc, BcTc, BcGaCg, EcCg, CzEcCg broadly comprise aspects of Beard's North Fitzroy Plains 699 and 700 vegetation communities with the presence of shrublands over curly spinifex (*Triodia bitextura*) on sandplain or between dunes (Government of Western Australia 2019).

Each of these vegetation associations has greater than 99% of their extent remaining within Western Australia (Government of Western Australia 2019) and are therefore not considered locally restricted.

Vegetation communities recorded within the Project Area are similar to those recorded from previous studies within the region; Low Ecological Services (2012b) recorded a mix of *Bauhinia cunninghamii*, *Adansonia gregorii*, *Corymbia* spp. and *Acacia* spp. over hummock (*Triodia* spp.) and tussock grasslands (*Aristida*, *Sorghum*) within the Asgard 2D seismic survey area, located adjacent to and within the current Project Area. Low Ecological Services (2020) also recorded similar plant community structure and composition, including low open woodlands (*Adansonia gregorii*, *Bauhinia cunninghamii*, *Corymbia* spp.) and grasslands, riparian communities and low woodland on sand dunes within the Odin 2D and 3D seismic survey area, located adjacent to and within the current Project Area. Woodman Environmental (2007) also recorded a plant community of similar composition (open woodland of *Eucalyptus* and *Corymbia* over *Aristida* and *Eriachne* tussock grasses) within their Valhalla Well Site survey area.

Vegetation condition within the Project Area ranged from Excellent to Poor, with majority of the vegetation within the Project Area classed as Very Good (69.93 ha; 54.57%) and Excellent (45.28 ha; 35.34%). Disturbances within the Project Area included impacts from pastoral activities (e.g. cattle grazing, scats and tracks), previous clearing and adjacent tracks which facilitate edge effects and minor weed invasion. The Project Area also has prevalence of fire with many areas being recently burnt across the landscape, particularly preceding the field survey in May.

5.2. Fauna

5.2.1. Fauna habitat

The Project Area contained three broad fauna habitat types, namely Fauna habitat 1: Mixed open woodland over grassland on sandy clay flats and slopes, which correlates to vegetation communities Ag, AgBc, AgCgEc, AtAcDo, BcCg, BcTc and CgAgBc, Fauna habitat 2: Mixed open woodland over tussock grasses on dune slopes and crests, which correlates to vegetation communities BcGaCg, CgCzBc, CzEcCg and EcCg, and Fauna habitat 3: Eucalypt open woodland and mixed shrubland on closed depression and creekline, which correlates to vegetation communities CbEc and EmEcAg.

Fauna habitats within the Project Area broadly represent aspects of the Calwynyardah, Camelgooda and Djada Land Systems on which they occur, including the presence of woodlands and grasslands,

sandplains and sand dunes and floodplain supporting woodland and grasslands (DPIRD 2021a). These land systems are represented in the broader landscape and are not considered as locally restricted. Fauna habitats recorded within the Project Area are similar to those recorded from previous studies within the local area; Buru Energy and Outback Ecology (2014) recorded similar habitat types, including sand plains and dunes, alluvial channels and floodplains, located within their survey area (Ophir, Paradise, Valhalla, Eden and Ellendale) adjacent to the west of the Project Area, while ELA (2016) recorded a mixture of woodlands and grasslands on dunes and plains at their Valhalla Central A survey area, which is located within the adjacent to the Project Area.

5.2.2. Fauna overview

A total of 75 fauna species were recorded during the field survey. This number comprised of 52 birds, five mammals, eight reptiles and ten invertebrates. This is similar to other assemblages recorded in the local area, with Low Ecological Services (2020) recording a total of including 60 birds, 11 mammals, three amphibians and five reptile species within the Odin 2D and 3D seismic survey area, located adjacent to and within the current Project Area, and Buru Energy and Outback Ecology (2014) recording a total of 86 vertebrate fauna species including 72 birds, seven mammals, five reptiles and two amphibians within their survey area (Ophir, Paradise, Valhalla, Eden and Ellendale) adjacent to the west of the Project Area.

5.2.3. Conservation significant fauna

One fauna species of conservation significance was recorded within the Project Area; the Greater Bilby (*Macrotis lagotis*), listed as VU under the EPBC Act and BC Act. The Greater Bilby is a medium-sized burrowing marsupial of the Thylacomyidae family, with long, soft, blue-grey fur over most of the body and white to cream on the belly. It has large ears, a long-pointed snout and a black tail with a white tip (Threatened Species Scientific Committee [TSSC] 2016a). This species is currently known from 3303 records within Western Australia from the Dampier Peninsula in the north to Albany in the south (DBCA 2007-2021). The range of the Greater Bilby has, however, declined, with wild populations in Western Australia now reduced to the Gibson Desert, Little Sandy Desert, Great Sandy Desert and parts of the Pilbara and southern Kimberley (TSSC 2016a). The remaining populations of the Greater Bilby occupy three main habitats: open tussock grassland on uplands and hills, *Acacia aneura* (mulga) woodland/shrubland growing on ridges and rises, and hummock grassland in plains and alluvial areas (TSSC 2016a).

The Greater Bilby has been previously recorded in the local region, with unconfirmed signs recorded in both Low Ecological Services (2020) and Low Ecological Services (2012b). A previous record from 2002, identified from the DBCA Threatened and Priority fauna database search undertaken for the Project Area, is located approximately 47 km north of the Project Area (DBCA 2021b). Within the Project Area, evidence of this species in the form of diggings was recorded at four locations in the south-east within Fauna habitat 2. Greater Bilby diggings have a conical shape, which is a distinguishing feature of this species (Moseby *et al*. 2012, Department of Sustainability, Environment, Water, Population and Communities [SEWPaC] 2011). Diggings were relatively fresh and intact (i.e. had not completely collapsed or washed away) and estimated to be less than one year old. No direct observations of this species were made. Within the Project Area, Fauna habitat 2: Mixed open woodland over tussock grasses on dune slopes and crests is considered as providing suitable habitat for this species.

Of the remaining 53 conservation listed fauna species identified from the pre-likelihood of occurrence survey assessment as possibly occurring within the Project Area, nine of these are considered as having

the potential to occur post-survey, based on proximity of previous records to the Project Area and availability of suitable habitat within the Project Area:

- *Erythrura gouldiae* (Gouldian Finch; listed as EN under the EPBC Act and as P4 by DBCA);
- *Falco hypoleucos* (Grey Falcon; listed as VU under the EPBC Act and BC Act);
- *Actitis hypoleucos* (Common Sandpiper; listed as M under EPBC Act and BC Act);
- *Apus pacificus* (Fork-tailed swift; listed as M under EPBC Act and BC Act);
- *Calidris acuminata* (Sharp-tailed sandpiper; listed as M under EPBC Act and BC Act);
- *Plegadis falcinellus* (Glossy ibis; listed as M under the EPBC Act and BC Act).
- *Falco peregrinus* (Peregrine falcon; listed as OS under BC Act);
- *Ctenotus uber johnstonii* (Spotted ctenotus (northeast); listed as P2 by DBCA); and
- *Leggadina lakedownensis* (Northern short-tailed mouse; listed as P4 by DBCA).

Of these, four species (*Actitis hypoleucos, Apus pacificus, Calidris acuminata* and *Plegadis falcinellus*) are migratory bird species which may utilise habitat within the Project Area only when conditions are favourable (e.g. after periods of heavy rainfall). Due to the vagrant and mobile nature of these species, their likelihood of occurrence rating (potential) is based on the availability of potentially suitable habitat within the Project Area and close proximity of recent records of these species (within 50 km).

The Gouldian Finch (*Erythrura gouldiae*) is a small bird, 12-15 cm in length, weighing about 14-15 grams. The adults are vividly multi-coloured, and exhibit three different facial colour-morphs: black-headed (most common), red-headed and yellow-headed (rare; TSSC 2016b). This species is currently known from 466 records within WA over a range of approximately 800 km, from Broome in the west to Kununurra in the east (DBCA 2007-2021). A recent record of this species from 2010 is located within 30 km of the Project Area (DBCA 2021b). Its preferred habitat consists of open woodlands that are dominated by Eucalypt trees and support a ground cover of *Sorghum* and other grasses (TSSC 2016a). Within the Project Area, Fauna habitat 1: Mixed open woodland over grassland on sandy clay flats and slopes and Fauna habitat 2: Mixed open woodland over tussock grasses on dune slopes and crests are considered as providing potentially suitable habitat for this species and it is therefore considered as having the potential to occur within the Project Area.

The Peregrine Falcon (*Falco peregrinus*) and the Grey Falcon (*Falco hypoleucos*) are large, powerfully build raptors (Birdlife Australia 2021) that are considered as having the potential to occur within the Project Area due to their ranges and habitat requirements. These species have wide ranges, with records occurring across most bioregions of Western Australia from the South-west to the Kimberley region (DBCA 2007-2020). Habitat requirements for each of these species are broad and varied, some of which are met by all fauna habitats within the Project Area in the form of plains, grasslands and shrublands. Previous records of these species are located within 20 km (*Falco peregrinus*) and 55 km (*Falco hypoleucos*) of the Project Area (DBCA 2021b).

The Spotted Ctenotus (northeast; *Ctenotus uber johnstonii*) is a medium sized long tailed skink (to 24 cm long) with a pattern of stripes and spots, differentiated from *C. uber* by the presence of a well-developed vertebral stripe and contiguous nasal scales (Wilson and Swan 2010; Storr *et. al* 1999). The subspecies is known from 44 records within Western Australia, from near Derby in the north to south of Port Hedland in the south (DBCA 2007-2021). It has been recorded occurring in the arid northeast interior on hard, reddish soils (Storr *et. al* 1999). Due to the presence of potentially suitable habitat (hard

reddish soils of Fauna habitat 1) and the close proximity of two previous recent records to the Project Area (within 15 km from 2011; DBCA 2021b), this species is considered as having the potential to occur.

The Northern Short-tailed Mouse (*Leggadina lakedownensis*) is a small, nocturnal rodent endemic to northern Australia, occurring from the Pilbara region of Western Australia to Cape York in the east (Aplin *et al*. 2016). It occupies monsoonal tropical coast to semiarid areas in spinifex and tussock grasslands, samphire, sedgelands, *Acacia* shrublands, tropical *Eucalyptus* and *Melaleuca* woodlands and stony ranges (Van Dyck *et al.* 2003). Two recent records of this species from 2011 are located within 15 km of the Project Area (DBCA 2021b). Given the suitability of available habitat(spinifex and tussock grasslands, *Acacia* woodlands) and the presence of nearby records of this species, it is considered as having the potential to occur within the Project Area.

Of note, Low Ecological Services (2020) recorded unconfirmed signs (native mammal scats) of the Northern Quoll (*Dasyurus hallucatus*). Given the absence of species habitat requirements (rocky areas, Eucalypt forests etc.) and no previous records within 100 km of the Project Area (DBCA 2021b), this species is considered as unlikely to occur within the Project Area.

Several fauna species previously recorded in the vicinity of the Project Area as conservation significant species are no longer listed as such. These include *Ardea modesta* (Eastern Great Egret; Buru Energy and Outback Ecology 2014), *Ardeotis australis* (Australian Bustard; Buru Energy and Outback Ecology 2014; Low Ecological Services 2012b; Low Ecological Services 2011b), *Burhinus grallarius* (Bush Stone-curlew; Buru Energy and Outback Ecology 2014), and *Merops ornatus* (Rainbow Bee-eater; ELA 2016; Buru Energy and Outback Ecology 2014; Low Ecological Services 2012b; Low Ecological Services 2011a).

5.3. Aboriginal significant bush foods[2]

5.3.1. Aboriginal significant bush foods – flora

A total of two flora species considered as Aboriginal significant bush foods were recorded within the Project Area, namely *Adansonia gregorii* (Boab) and *Carissa lanceolata* (Conkerberry).

Boab trees (Aboriginal name: jumuluny) are a Kimberley icon, growing right across from the west coast of the Kimberley to the east, into the Northern Territory. Boabs range from 10-15 m in height and 9-12 m in width and have bright lime to dark green leaves shaped like a star (DBCA and WAH 2021). The boab tree produces a hard pod with light brown fur that grows on the outside. The hard pod is broken to reveal a fruit; a white, powdery pith containing 10 to 20 or more seeds. The powdery pith inside the nut, along with the seeds, is what can be eaten and has a sherbet texture and a sour, tangy flavour. The pith is commonly crushed and mixed with water and sugarbag droplets and then eaten. The seeds found inside the pith can be dried and eaten like peanuts. The boab also has other traditional uses, including the use of the bark to make strong, thick twine, the trunk to produce water and the fruit for medicinal or artistic purposes.

Within the Project Area, boab trees were recorded as a dominant or associated species within five of the 14 vegetation communities described, at a <5% cover. Of note was one particularly large tree occurring across a portion of the track leading to the Midgard well site (m 685634E; m 7992864N).

The conkerberry (Aboriginal name: piriyalji) is native mainly to the Top End and central Australia but is also found around Cape York in far north Queensland and in the Kimberley region of Western Australia. In a hot, dry climate this species grows on a wide range of terrains and soil types. The Conkerberry is a multi-stemmed shrub, 1-3 m high with glossy green narrow leaves, hard thorns, and white, star-shaped flowers from December to January. The small conkerberries, also known as bush currants, are 1-2 cm long and appear in February to March, turning a dark purple or black when ripe. Aboriginal people frequently eat conkerberries, as they have a sweet, refreshing taste. The conkerberry has other traditional uses, including burning of the wood to create smoke to treat colds and coughs (inhalation), the orange roots to burn to keep bad spirits away or as an insect deterrent.

Within the Project Area, conkerberry was recorded as a dominant or associated species within ten of the 14 vegetation communities described, at a <5% cover.

5.3.2. Aboriginal significant bush foods – fauna

A total of four fauna species considered as Aboriginal significant bush foods were recorded within the Project Area, namely *Ardeotis australis* (Australian Bustard), *Osphranter rufus* (Red Kangaroo), *Varanus gouldii* (Sand Goanna) and *V. panoptes* (Yellow-spotted Monitor).

Australian Bustard (Aboriginal name: wawun, kere artewe, kipara, danimila), also known as 'bush turkey' to Aboriginal people, are large ground birds that roam the grasslands, woodlands and open plains, mainly across the northern and central parts of Australia where the climate is warm and dry. They can grow to 1.5 m with a wingspan of 2.5 m, and the average male can weight 6.5 kilograms (kg). Australian

[2] Aboriginal significant bush food species information is sourced from Martin (2014) and Low (1991)

Bustard has played an important role in the diet of Indigenous people throughout the Kimberley, central desert and for North Queensland, and is still eaten today. This species also plays an important part in the dreamtime stories, with many Indigenous people having totemic spiritual connections with the animal. Australian Bustard was recorded from one location within the Project Area (m 683743E; m 7992977 N), however is likely to utilise most habitats found throughout the Project Area as they wander and search for food.

Kangaroos (Aboriginal name: ganuurr, kere aherre, malu, jarlangarnany, gangurru) are herbivorous marsupials with large, powerful hindlegs, large feet for leaping and a long, muscular tail for balance. They can be found across most of Australia occurring across a wide and varying range of habitat types. There are four species of kangaroo; Red, Eastern Grey, Western Grey and Antilopine. The Red Kangaroo is the largest of the four species, with males growing to 2 m and weighing up to 100 kg. In addition to being hunted for food, kangaroos play an important part in dreamtime stories of many Aboriginal language groups and has spiritual totemic significance for some tribes. Red Kangaroo (*Osphranter rufus*) was recorded from scats throughout the Project Area and spotted in the distance at various locations and is likely to utilise most habitats found throughout the Project Area.

Goannas (Aboriginal name: karda, ganyal, kanyarrany) are large, carnivorous lizards with sharp teeth and claws, growing to 2-3 m long. There are 30 species of goanna in the world, 25 of which can be found within Australia, generally in warmer climates. Goannas typically reside underground in burrows or hollow logs and typically prey on birds, bird eggs, or smaller mammals. Goanna is considered a delicacy amongst Aboriginal people, and to hunt a goanna takes a lot of skill and energy; it involves tracking the goanna to find its burrow and then flushing it out to catch it. Goannas also feature strongly in dreamtime stories and as individual, family and clan spiritual totems. During the field survey, both *Varanus gouldii* (Sand Goanna) and *V. panoptes* (Yellow-spotted Monitor) were spotted several times sunbaking along tracks. These species are likely to utilise all habitats found throughout the Project Area for foraging and/or burrowing.

Appendix A Framework for conservation significant flora and fauna ranking

CATEGORIES OF THREATENED SPECIES UNDER THE ENVIRONMENT PROTECTION AND BIODIVERSITY CONSERVATION ACT 1999 (EPBC ACT)

Threatened fauna and flora may be listed in any one of the following categories as defined in Section 179 of the EPBC Act. Species listed as 'conservation dependent' and 'extinct' are not Matters of National Environmental Significance and therefore do not trigger the EPBC Act.

Category	Definition
Extinct (EX)	There is no reasonable doubt that the last member of the species has died.
Extinct in the Wild (EW)	Taxa known to survive only in captivity or as a naturalised population well outside its past range; or taxa has not been recorded in its known and/or expected habitat at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
Critically Endangered (CR)	Taxa considered to be facing an extremely high risk of extinction in the wild.
Endangered (EN)	Taxa considered to be facing a very high risk of extinction in the wild.
Vulnerable (VU)	Taxa considered to be facing a high risk of extinction in the wild.
Near Threatened (NT)	Taxa has been evaluated against the criteria but does not qualify for Critically Endangered, Endangered or Vulnerable now, but is close to qualifying for or is likely to qualify for a threatened category in the near future.
Least Concern (LC)	Taxa has been evaluated against the criteria and does not qualify for Critically Endangered, Endangered, Vulnerable or Near Threatened. Widespread and abundant taxa are included in this category.
Data Deficient (DD)	There is inadequate information to make a direct, or indirect, assessment of taxa's risk extinction based on its distribution and/or population status.
Not Evaluated (NE)	Taxa has not yet been evaluated against the criteria.
Migratory (M)	Not an IUCN category. Species are defined as migratory if they are listed in an international agreement approved by the Commonwealth Environment Minister, including: • the Bonn Convention (Convention on the Conservation of Migratory Species of Wild Animal) for which Australia is a range state; • the agreement between the Government of Australian and the Government of the People's Republic of China for the Protection of Migratory Birds and their environment (CAMBA); • the agreement between the Government of Japan and the Government of Australia for the Protection of Migratory Birds and Birds in Danger of Extinction and their Environment (JAMBA); or • the agreement between Australia and the Republic of Korea to develop a bilateral migratory bird agreement similar to the JAMBA and CAMBA in respect to migratory bird conservation and provides a basis for collaboration on the protection of migratory shorebirds and their habitat (ROKAMBA).

CONSERVATION CODES FOR WESTERN AUSTRALIA FLORA AND FAUNA

The Wildlife Conservation (Specially Protected Fauna) Notice 2018 and the Wildlife Conservation (Rare Flora) Notice 2018 have been transitioned under regulations 170, 171 and 172 of the Biodiversity Conservation Regulations 2018 to be the lists of Threatened, Extinct and Specially Protected species under Part 2 of the *Biodiversity Conservation Act 2016*.

Specially protected fauna or flora are species which have been adequately searched for and are deemed to be, in the wild, threatened, extinct or in need of special protection, and have been gazetted as such.

Threatened species (T)
Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

Threatened fauna is that subset of 'Specially Protected Fauna' listed under schedules 1 to 3 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018 for Threatened Fauna.

Threatened flora is that subset of 'Rare Flora' listed under schedules 1 to 3 of the Wildlife Conservation (Rare Flora) Notice 2018 for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

Category	Code	Description
Critically Endangered species	CR	Threatened species considered to be "facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines". Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018 for critically endangered fauna or the Wildlife Conservation (Rare Flora) Notice 2018 for critically endangered flora.
Endangered species	EN	Threatened species considered to be "facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines". Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018 for endangered fauna or the Wildlife Conservation (Rare Flora) Notice 2018 for endangered flora.

Category	Code	Description
Vulnerable species	VU	Threatened species considered to be "facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines". Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the Wildlife Conservation (Rare Flora) Notice 2018 for vulnerable flora.

Extinct species

Listed by order of the Minister as extinct under section 23(1) of the BC Act as extinct or extinct in the wild, as follows:

Category	Code	Description
Extinct species	EX	Species which have been adequately searched for and there is no reasonable doubt that the last individual has died. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Presumed Extinct Fauna and Wildlife Conservation (Rare Flora) Notice for Presumed Extinct Flora.
Extinct in the wild species	EW	Species that "is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form", and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act). Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

Categories are detailed below.

Category	Code	Description
Migratory species	M	Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act). Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species. Published as migratory birds protected under an international agreement under schedule 5 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018.
Species of special conservation interest (conservation dependent fauna)	CD	Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act). Published as conservation dependent fauna under schedule 6 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018.
Other specially protected species	OS	Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act). Published as other specially protected fauna under schedule 7 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018.

Priority species (P)

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Category	Code	Definition
Priority 1	P1	*Poorly-known species* Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.
Priority 2	P2	*Poorly-known species* Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.
Priority 3	P3	*Poorly-known species* Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.
Priority 4	P4	*Rare, Near Threatened and other species in need of monitoring* (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands. (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent. (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

Appendix B Likelihood of occurrence assessment criteria

Likelihood rating	Criteria
Recorded	The species has previously been recorded within project area from DBCA database search results and/or from previous surveys of the project area, and/or the species has been confirmed through a current vouchered specimen at WA Herbarium.
Likely	The species has not previously been recorded from within the project area. However, (to qualify requires one or more criteria to be met): • the species has been recorded in close proximity to the project area, and occurs in similar habitat to that which occurs within the project area • core habitat and suitable landforms for the species occurs within the project area either year-round or seasonally. In relation to fauna species, this could be that a host plant is seasonally present on site, or habitat features such as caves are present that may be used during particular times during its life cycle e.g. for breeding. In relation to both flora and fauna species, it may be there are seasonal wetlands present • there is a medium to high probability that a species uses the project area.
Potential	The species has not previously been recorded from within the project area. However, (one or more criteria requires to be met): • targeted surveys may locate the species based on records occurring in proximity to the project area and suitable habitat occurring in the project area • the project area has been assessed as having potentially suitable habitat through habitat modelling • the species is known to be cryptic and may not have been detected despite extensive surveys • the species is highly mobile and has an extensive foraging range so may not have been detected during previous surveys The species has been recorded in the project area by a previous consultant survey or there is historic evidence of species occurrence within the project area. However, (one or more criteria requires to be met): • doubt remains over taxonomic identification, or the majority of habitat does not appear suitable (although presence cannot be ruled out due to factors such as species ecology or distribution) • coordinates are doubtful.
Unlikely	The species has been recorded locally through DBCA database searches. However, it has not been recorded within the project area and • it is unlikely to occur due to the site lacking critical habitat, having at best marginally suitable habitat, and/or being severely degraded • it is unlikely to occur due to few historic record/s and no other current collections in the local area. The species has been recorded within the bioregion based on literature review but has not been recorded locally or within the project area through DBCA database searches. The species has not been recorded in the project area despite adequate survey efforts, such as a standardised methodology or targeted searching within potentially suitable habitat.

Likelihood rating	Criteria
Does not occur (one or more criteria requires to be met).	The species is not known to occur within the IBRA bioregion based on current literature and distribution. The conspicuous species has not been recorded in the project area despite adequate survey efforts at an appropriate time of year to detect the species within potentially suitable habitat. The project area lacks important habitat for a species that has highly selective habitat requirements. The species has been historically recorded within project area or locally; however, it is considered locally extinct due to significant habitat changes such as land clearing and/or introduced predators.

Appendix C Flora likelihood of occurrence assessment

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Aristida polyclados	-	P1	DBCA 2021a	Tufted annual, grass-like or herb, 0.3-0.4 m high. Fl. brown, Apr.	Alluvium. Limestone gorges.	Unlikely	Nearest record (1988) ~20 km N of Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. alluvial soils in limestone gorges. Known records are sparse being associated with gorges, with the nearest record approximately 20 km from the Project Area.
Corymbia pedimontana	-	P1	DBCA 2021a	Tree, to 10 m high, bark brownish-red, tessellated. Fl. Jun or Sep	Red sandy soils or red loam over limestone. Plains at base of hills.	Unlikely	Nearest records (1988) ~60 km NE of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. sandy soils over limestone at the base of hills. Known records occur in a distinct cluster approximately 60 km northeast of the Project Area
Cucumis sp. Bastion Range (A.A. Mitchell et al. AAM 10710)	-	P1	DBCA 2021a	Climbing woody herb (vine), 0.5 m high	Previous records are from margins of creek in sandstone country, foot slopes. Brown silty loam over dolerite. Sandstone / limestone.	Unlikely	Nearest record (1962) ~75 km E of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. creek margins within sandstone and limestone foot slopes. Known records all occur to the north and northeast of the Project Area, with the closest being 75 km away.
Cullen candidum	-	P1	DBCA 2021a	Shrub, to 3 m high. Fl. white, Sep to Oct.	Previous records are from brown clayey sand, floodplain.	Unlikely	Nearest populations (1988) ~55 km E of the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. floodplains with brown clayey sand. Known records are sparse, tending to occur to the east of the Project Area, the nearest being approximately 55 km away
Eucalyptus distans	-	P1	DBCA 2021a	Tree, to 9 m high, bark fine, grey, fissured	Loam, sandstone. Base of range.	Unlikely	Nearest record (1981) is ~50 km NW of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. sandstone at the base of ranges. Known records are very sparse, with majority occurring well to the north and northeast of the Project Area (>500 km). One record occurs approximately 40 km north of the Project Area, however this record is associated with rehabilitation trial at the Ellendale diamond mine.

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Fimbristylis dictyocolea	-	P1	DBCA 2021a	Shortly rhizomatous, tufted perennial, grass-like or herb (sedge), 0.5-0.8 m high	Edge of swamps or in water, sand over clay.	Potential	Nearest record (2014, in rehab) ~40 km N of the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area. Although standing water was present at the time of survey, this was result of sheet flow saturation, rather than presence of true swamp environments. The majority of known records occur near Katherine (Northern Territory), with a single record in Western Australia (collection date 1981), occurring approximately 50 km to the north of the Project Area
Fimbristylis sp. H Kimberley Flora (Carr 3944 & Beauglehole 47722)	-	P1	DBCA 2021a	Perennial, grass-like or herb (sedge), ca 0.3 m high. Fl. brown, Jul.	Occurs on sandy loam plains with meandering sandy drainage lines and brown sand soil.	Unlikely	Nearest record (1974) ~65 km NE of the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. sandy drainage lines. One known record of the species occurs at Tunnel Creek in the Napier Range (collection date 1974), approximately 65 km northeast of the Project Area.
Heliotropium foveolatum	-	P1	DBCA 2021a	Ascending to spreading annual, herb, to 0.3 m high. Fl. Feb to Jul.	Seasonally inundated, orange sandy clay on plains in low open *Bauhinia* woodland or *Triodia* grassland.	Potential	Nearest record (1 plant, 2011) ~20 km W of Project Area.	Potential	Suitable habitat and associated species occur within the Project Area, e.g. seasonally inundated, orange sandy clay on plains in low open *Bauhinia* woodland or *Triodia* grassland. A cluster of known records occur approximately 20 km west of the Project Area.
Heliotropium geocharis	-	P1	DBCA 2021a	Erect annual, herb, to 0.5 m high. Fl. white, Jan to Apr.	Alluvium, black soils. Plains.	Unlikely	Nearest record (1952) ~20 km W of the Project Area. Most recent nearby record (1988) ~60 km E of Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. black alluvial soils. Known records are sparse, with the nearest being approximately 20 km west of the Project Area (it is noted that record has a collection date of 1953)

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Heliotropium parviantrum	-	P1	DBCA 2021a	Erect annual, herb, to 0.15 m high. Fl. Feb to Jun.	Sandy soils. Flats, plains, rocky slopes.	Unlikely	Nearest record (1967) ~60 km NW of Project Area.	Unlikely	Marginal habitat may occur within the Project Area e.g. sandy soils on flats and plains. However, this assessment is based on very broad habitat descriptions (e.g. sandy soil), which do not contain sufficient detail. Known records are sparse, mostly occurring near Port Hedland. One record occurs approximately 60 km northwest of the Project Area (collection date 1967).
Mitrasacme sp. I Kimberley Flora (K.F. Kenneally s.n. PERTH 04115058)	-	P1	DBCA 2021a	Herb	In black soil of boggy soak with *Pandanus*.	Unlikely	Nearest record (1976) ~60 km NE of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. black soil of soggy soak. One record occurs at Little Spring, Leopold Downs, approximately 60 km NE of the Project Area
Nymphaea carpentariae	-	P1	DBCA 2021a	Aquatic plant with floating leaves	Ephemeral - semi - permanent floodplain pool on alluvial and colluvial flat surrounded by landscape of gneiss and granite hills and domes.	Unlikely	Nearest population (2019) ~60 km NE of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. permanent wetlands. Two sparse records occur in association with rangelands, the nearest being 60 km northeast of the Project Area
Nymphaea kimberleyensis	-	P1	DBCA 2021a	Aquatic plant with floating leaves, gigantea-type; flowers blue.	Permanently inundated water bodies.	Unlikely	Nearest records (1998-2002) ~ km E of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. permanently inundated water bodies. Known records form a cluster north of Fitzroy Crossing, approximately 60 km east of the Project Area.
Trachymene oleracea subsp. *sedimen*ta	-	P1	DBCA 2021a	Annual, herb, 0.3-0.6 m high, Fl. white/blue, May to Jun.	Limestone or sandstone rocky slopes.	Unlikely	Nearest record (1971) ~70 km NE of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. limestone or sandstone rocky slopes. Known records are very sparse, mostly occurring >500 km northeast of Project Area. One record occurs approximately 70 km northeast of the Project Area within the Napier Range.

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Trianthema kimberleyi	-	P1	Low Ecological Services 2012b	Prostrate, much-branched annual, herb. Fl. white-pink, Mar.	Schistous soils	Potential	Nearest record (1989) ~200 km SE of the Project Area. However, Low Ecological Services (2012b) shows a record of this species along Noonkanbah Rd <10 km from the Project Area. Suitable habitat may occur in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. schistous soils. Although a previous consultant survey recorded this species <10 km from the Project Area, known information suggests that this species occurs only on schistous soils, a soil type that was not recorded within the Project Area. The single known WAH record of this species occurs >200 km to the southeast of the Project Area.
Triodia pascoeana	-	P1	DBCA 2021a	Dense, tussock-forming perennial, grass-like or herb, 1-3 m high, non-resinous, Fl. Jan to Apr	Limestone. Limestone ranges & gorges, floodplains.	Unlikely	Nearest record (1988) is ~20 km N of the Project Area. Most recent record (2017) ~50 km NE of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. limestone soils and landscapes. Known records are sparse, with the nearest occurring approximately 50 km NE of the Project Area within the Napier Range
Cayratia cardiophylla	-	P2	DBCA 2021a	Deciduous climber. Fl. green-white, Aug to Dec.	Limestone. Seepage areas, amongst rocks.	Unlikely	Nearest records (1990) ~70 km E of Project Area. No suitable habitat in Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. limestone seepage areas amongst rocks. Known records are sparse, with the nearest occurring approximately 50 km NE of the Project Area within the Napier Range
Goodenia virgata	-	P2	Low Ecological Services 2012b	Ascending to erect, virgate perennial, herb, to 0.4 m high. Fl. yellow, Jul.	Red sandy loam. Near salt pans.	Potential	Nearest record (2000) ~400 km SE of the Project Area. However, Low Ecological Serviced 2012b shows a nearby record of this species within ~20 km of the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. red sandy loam near salt pans. Although a previous consultant survey recorded this species 5 km from the Project Area, known information suggests that this species occurs near salt lakes, a habitat type not found within the Project Area. WAH records all occur well to the south and southeast (>400 km) associated with inland saltpans.

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Hibiscus calcicola	-	P2	DBCA 2021a	Shrub, to 1.5 m high.	Red clay soils on limestone. At bases of rocky outcrops.	Unlikely	Nearest record (1981) ~70 km NE of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. red clay soils at the bases of rocky limestone outcrops. One known record occurs approximately 70 km northeast of the Project Area in the Geikie Gorge NP.
Pterocaulon globuliflorum	-	P2	DBCA 2021a	Erect, much-branched perennial, herb or shrub, 0.4-0.6 m high. Fl. white-cream, Jun.	Sand. Sandstone cliffs & scree slopes.	Unlikely	Nearest records (1974) ~70 km NE of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. sandstone cliffs and scree slopes. One record occurs approximately 70 km northeast of the Project Area, within the Windjana Gorge National Park.
Acacia monticola x *tumida* var. *kulparn*	-	P3	DBCA 2021a	Shrub to 2 m, bark grey and fissured on branches	Red sand/loam/rocky, sand.	Unlikely	Nearest record (1983) is ~60 km N of the Project Area.	Potential	Marginal habitat may occur within the Project Area e.g. red sand/loam. This species is known to occur with *Acacia tumida*, a common species within the Project Area. Known records are geographically separated as to those occurring east of Derby and those occurring along the coast. The nearest record to the Project Area occurs approximately 60 km to the north. It is noted that collection records of this species are under a Temporary Sorting Slip at the WAH, until species nomenclature is resolved.
Corchorus fitzroyensis	-	P3	DBCA 2021a	Low compact bushy shrub to 0.3 m high, spreading to 1 m, flowers golden yellow	Alluvial and colluvial flats. Red-brown sandy clay loam.	Potential	Several records (1988) ~20 km SE of the Project Area.	Potential	Suitable habitat occurs within the Project Area, e.g. alluvial and colluvial flats with red-brown sandy clay loam. Several known records occur approximately 20 km south east of the Project Area.

	EPBC Act	BC Act / DBCA							
Fimbristylis sieberiana	-	P3	DBCA 2021a	Shortly rhizomatous, tufted perennial, grass-like or herb (sedge), 0.25-0.6 m high. Fl. brown, May to Jun.	Mud, skeletal soil pockets. Pool edges, sandstone cliffs. Riparian zones of permanent wetlands with high soil moisture maintained by groundwater flows (Pilbara). .	Unlikely	Nearest record (1988) ~60 km E of the Project Area. No suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. pool edges and sandstone cliffs. Known occurrences are scattered throughout the Kimberley and Pilbara, in association with gorges and permanent water pools. The nearest record occurs approximately 60 km east of the survey, within the Brooking Gorge Conservation Park.
Gomphrena leptophylla	-	P3	DBCA 2021a	Prostrate or erect to spreading annual, herb, to 0.15 m high. Fl. white, Mar to Sep.	Sand, sandy to clayey loam, granite, quartzite. Open flats, sandy creek beds, edges salt pans & marshes, stony hillsides.	Unlikely	Nearest record (1972) ~60 km SW of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Marginal habitat may occur within the Project Area e.g. sand, sandy to clayey loam. This species occurs across a range of different habitat types, with typical associated species not occurring within the Project Area (e.g. *Acacia bivenosa*, *Triodia epactia*, *Triodia lanigera*). Known records tend to occur within the Pilbara region, with only two records in the Kimberly region. The nearest record occurs approximately 60 km southwest of the Project Area (collection date 1972).
Goodenia byrnesii	-	P3	DBCA 2021a, Woodman Environmental Consulting 2007, Naturemap	Prostrate to decumbent herb, stems to 30 cm. Fl. yellow, Jan to Feb.	Sand. Edge of creek.	Likely	Nearest previous record (2007) ~700 m from the Project Area.	Likely	Suitable habitat and associated species occur within the Project Area, e.g. sandy creek edges with *Bauhinia cunninghamii* scattered low trees and grasses. Known records occur <1 km from the Project Area.
Goodenia sepalosa var. *glandulosa*	-	P3	DBCA 2021a, Woodman Environmental Consulting 2007	Prostrate to sprawling herb, 0.03-0.3 m high. Fl. yellow, Jan to Dec (mainly Apr-Jul).	Found in open woodland on red sand or loam. Midslope, very gentle.	Potential	Record of 1 plant (2011) ~13 km W of Project Area.	Likely	Suitable habitat and associated species occur within the Project Area, e.g. red sand or loams with *Bauhinia cunninghamii* open woodland over *Acacia tumida* var. *tumida* tall shrubland. A known record occurs <15 km from the Project Area.

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Nymphoides beaglensis	-	P3	DBCA 2021a, Naturemap	Aquatic annual, herb. Fl. white/white-pink-purple, Mar to Jun.	In shallow freshwater. Edges of permanent waterholes or in seasonally inundated claypans & depressions.	Potential	Nearest record is 2 plants (1997) ~40 km N of Project Area.	Recorded	Species was recorded in a seasonally inundated depression within the Project Area from eight point-locations totalling 112 individuals.
Phyllanthus fuernrohrii	-	P3	DBCA 2021a	Low shrub to 1 m high, flowers green	While reasonably widespread in the Northern Territory, South Australia, Queensland and New South Wales, in Western Australia it is only known from a single collection in the Wingellina Hills.	Does not occur	Does not occur in most of WA except near the SA border - misidentified previously and should be *P. hamelinii* (Barrett and Telford 2015)	Does not occur	Does not occur within the Project Area. This name has previously been misapplied in Western Australia to specimens here recognised as *P. hamelinii.*
Pterocaulon xenicum	-	P3	DBCA 2021a	Perennial herb, to 0.5 m tall	Rocky or gravelly plains and slopes in *Acacia* shrubland over *Triodia* grassland	Unlikely	Nearest record (1952) ~80 km SE of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. rocky or gravelly plains and slopes. Known records are scattered, with the majority occurring well to the south of the Project Area. The nearest record occurs approximately 80 km to the southeast of the Project Area associated with limestone outcropping.
Schoenus punctatus	-	P3	DBCA 2021a	Shortly rhizomatous, tufted perennial, grass-like or herb (sedge), ca 0.6 m high. Fl. brown, Aug.	Sand along watercourses in open eucalypt woodland.	Unlikely	Nearest record (2004) ~75 km E of the Project Area.	Unlikely	Marginal habitat may occur within the Project Area e.g. sand along watercourses in open eucalypt woodland. Known records are very sparse, with the majority occurring well to the northeast of the Project Area. The nearest record occurs approximately 75 km northeast of the Project Area

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Tephrosia pedleyi	-	P3	DBCA 2021a	Prostrate, spreading or scrambling, shrub, spindly shrub (broom-like) or herb, flowers in June, July and August	Pindan sandplain, gently undulating sandplain. Very sparse open woodland.	Unlikely	Nearest record (1959) is ~75 km W of the Project Area.	Potential	Suitable habitat occurs within the Project Area, e.g. Pindan sandplain, very sparse open woodland. Known records are scattered to the south of the Project Area, the nearest being approximately 75 km to the southwest.
Tephrosia rosea var. Napier Range (C.R. Dunlop 7760 & B.K. Simon)	-	P3	DBCA 2021a	Erect, shrub, spindly shrub (broom-like) or herb, flowers in April.	Gritty, red clay soils, skeletal soils and between rock cracks, on plains and lower slopes of valleys. Eucalypt woodland over *Triodia* grassland.	Unlikely	Nearest records (1988, 1999) ~60 km NE of the Project Area. Little suitable habitat in the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. gritty skeletal soils and slopes of valleys. Known records are scattered to the north and east of the Project Area, the nearest being approximately 60 km north east within the Devonian Reef Conservation Park.
Tephrosia sp. Mistake Creek (A.C. Beauglehole 54424)	-	P3	DBCA 2021a	Erect, shrub, spindly shrub (broom-like), flowers in May, July and November	Alluvial flats and in rocky stream beds; recorded as occurring in woodland of *Gyrocarpus*, *Terminalia* and *Bauhinia.*	Unlikely	Nearest record (2006) ~70 km NE of the Project Area.	Unlikely	Suitable habitat does not occur within the Project Area e.g. alluvial flats and rocky stream beds (limestone). Known records are scattered to the north and northeast of the Project Area, with the majority occurring >400 km away near Lake Argyle and Purnululu National Park. The nearest records occur approximately 70 km northeast of the Project Area, in a small cluster within the Napier Range associated with limestone outcrops.

Taxon	Conservation status		Source	Species Information*	Habitat information*	Pre-survey Likelihood	Pre-survey likelihood justification^	Post-survey likelihood	Post-survey likelihood justification
	EPBC Act	BC Act / DBCA							
Triodia acutispicula	-	P3	Woodman Environmental Consulting 2007	Tussock-forming resinonus perennial, grass-like or herb, 0.5-1.5 m high. Fl. cream-brown, Jan to Apr.	Sandy soils. River levees, pindan plains, rocky hillslopes & outcrops.	Potential	Nearest record (2010) ~200 km NE of the Project Area. However, Woodman Environmental Consulting 2007 shows a record of this species along Noonkanbah Rd <5 km from the Project Area. Suitable habitat may occur in the Project Area.	Unlikely	Marginal habitat may occur within the Project Area e.g. Pindan plains; however, the species tends to mostly occur on river levees and rocky hillslopes and outcrops. Although Woodman Environmental Consulting 2007 recorded this species <5 km from the Project Area, known information shows that the majority of populations occur well to the north of the Project Area (>300 km). The nearest record (DBCA and WAH 2021) occurs >200 km to the north east at Mornington Camp.
Utricularia muelleri	-	P3	DBCA 2021a, Naturemap	Floating aquatic perennial, herb. Fl. yellow-white, May to Jun.	Seasonal swamps.	Potential	Nearest record of a population (1997) ~40 km NW of Project Area.	Unlikely	Suitable habitat does not occur within the Project Area. Although standing water was present at the time of survey, this was result of sheet flow saturation, rather than presence of true swamp environments. The majority of known records occur well to the north of the Project Area, the nearest being approximately 40 km northeast within Lanlacatta Swamp.

*Species information available from DBCA and WAH 2021

^Species location information from DBCA 2021a

Appendix D Fauna likelihood of occurrence assessment

Species	Common name	Conservation status		Source	Habitat information	Pre-survey Likelihood	Pre-survey likelihood justification	Post-survey likelihood	Post-survey likelihood justification
		EPBC Act	BC Act / DBCA						
Calidris ferruginea	Curlew sandpiper	CR, IA	CR, IA	DBCA 2021a, PMST	Intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms. They are also recorded inland, though less often, including around ephemeral and permanent lakes, dams, waterholes and bore drains, usually with bare edges of mud or sand	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No suitable habitat for this species is present within the Project Area. A nearby record (2003) is located approximately 15 km to the west-southwest of the Project Area and is associated with the Fitzroy River.
Numenius madagascariensis	Eastern Curlew	CR, IA	CR, IA	PMST	Sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.
Pezoporus occidentalis	Night Parrot	EN	CR	Unlikely	*Triodia* (Spinifex) grasslands and/or chenopod shrublands in the arid and semi-arid zones, and *Astrebla* spp. (Mitchell grass), shrubby samphire and chenopod associations, scattered trees and shrubs, *Acacia aneura* (Mulga) woodland, treeless areas and bare gibber.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	The closest confirmed record is over 400 km south-east of the Project Area.
Malurus coronatus coronatus	Purple-crowned fairy-wren (western)	EN	EN	DBCA 2021a, PMST	Dense, riparian vegetation in the wet-dry tropics of Western Australia and the Northern Territory. It is found near permanent rivers and springs (or associated billabongs and swamps), where it occupies dense thickets of Pandanus aquaticus or canegrass and also occurs, less frequently, in rushes and shrubs.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Several historical records (1920 - 2000) 25 km east of the Project Area.

		EPBC Act	BC Act / DBCA						
Rostratula australis	Australian Painted Snipe	EN	EN	PMST	Inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. They also use inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.
Erythrura gouldiae	Gouldian finch	EN	P4	DBCA 2021a, Naturemap, PMST	Feed on grass seeds, presence of *Sorghum plumosum, Chrysopogon fallax, Triodia schinzii, Sehima nervosum.*	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	Potentially suitable habitat is present within the Project Area. Closest record is 30 km south of the Project Area from 2010.
Petrogale lateralis subsp. (West Kimberley)	West Kimberley black-footed rock-wallaby	VU	EN	DBCA 2021a, PMST	This species is known to occur on only a small number of scattered ranges and rocky outcrops in the West Kimberley. Species is likely to require woodlands dominated by *Eucalyptus* and *Corymbia* species with old and dead trees that have suitable nesting hollows	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Three historical records (1901 and 1992) occur 30 km west of the Project Area.
Falco hypoleucos	Grey falcon	VU	VU	DBCA 2021a, PMST	It prefers timbered lowland plains (especially those that are acacia-dominated) which are interspersed with tree-lined watercourses. The majority of its habitat has an average rainfall of less than 500 mm but frequents other habitats including grassland and sand dune habitats.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	Marginally suitable habitat for this species occurs within the Project Area. Only one record 50 km south of the Project Area from 2002.
Macroderma gigas	Ghost bat	VU	VU	DBCA 2021a, PMST	Shrubland, rocky areas (eg. inland cliffs, mountain peaks), Forest, Caves and Subterranean Habitats (non-aquatic), Savanna.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Most recent record (2006) is 50 km north-east of the Project Area.

		EPBC Act	BC Act / DBCA						
Macrotis lagotis	Bilby, dalgyte, ninu	VU	VU	DBCA 2021a, PMST	The remaining populations of the greater bilby occupy three main habitats: open tussock grassland on uplands and hills, *Acacia aneura* (mulga) woodland/shrubland growing on ridges and rises, and hummock grassland in plains and alluvial areas.	Likely	Suitable habitat may be present for this species within the Project Area. Nearby recent records located within 50 km of the Project Area.	Recorded	Diggings were recorded within the Project Area
Pristis pristis	Freshwater sawfish	VU	P3	DBCA 2021a, Naturemap, PMST	They inhabit the sandy or muddy bottoms of shallow coastal waters, estuaries and river mouths, as well as the central and upper reaches of freshwater rivers and isolated water holes, with records of large tooth sawfish up to 400 km inland	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Records are confined to the Fitzroy River.
Polytelis alexandrae	Princess Parrot, Alexandra's Parrot	VU	P4	PMST	Sand dunes and sand flats in the arid zone of western and central Australia. It occurs in open savanna woodlands and shrublands that usually consist of scattered stands of *Eucalyptus*, *Casuarina* or *Allocasuarina* trees; an understorey of shrubs such as *Acacia*, *Cassia*, *Eremophila*, *Grevillea*, *Hakea* and *Senna*; and a ground cover dominated by *Triodia* species. The species is usually recorded from shrubland in swales between sand dunes with sites having a variety of shrubs among scattered emergent trees and a groundcover of spinifex (*Triodia* sp.), and less often in woodland.	Unlikely	Project Area is at the northern extent of this species range, with most records confined to the Great Sandy Desert, Little Sandy Desert, Great Victoria Desert and Central Ranges bioregions. One historical record is located within 100 km of the Project Area.	Unlikely	Project Area is at the northern extent of this species range, with most records confined to the Great Sandy Desert, Little Sandy Desert, Great Victoria Desert and Central Ranges bioregions. One historical record is located within 100km of the Project Area.
Actitis hypoleucos	Common Sandpiper	IA	IA	DBCA 2021a, Naturemap	The species utilises a wide range of coastal wetlands and some inland wetlands, with varying levels of salinity, and is mostly found around muddy margins or rocky shores and rarely on mudflats. Generally, the species forages in shallow water and on bare soft mud at the edges of wetlands; often where obstacles project from substrate, e.g. rocks or mangrove roots.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	Two records from 2009 occur 10 km north of the project area. Sections of the project area are likely to provide marginally suitable habitat seasonally and after major rainfall events.

Apus pacificus	Fork-tailed swift	IA	IA	DBCA 2021a, Naturemap	In Australia, they mostly occur over inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	This species occurs across a variety of habitats. One record from 2010 occurs 15 km west of the project area.
Calidris acuminata	Sharp-tailed sandpiper	IA	IA	DBCA 2021a, Naturemap	They forage at the edge of the water of wetlands or intertidal mudflats, either on bare wet mud or sand, or in shallow water. Roosting occurs at the edges of wetlands, on wet open mud or sand, in shallow water, or in short sparse vegetation, such as grass or saltmarsh.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	One record from 2009 occurs 10 km north of the project area. Sections of the project area are likely to provide marginally suitable habitat seasonally and after major rainfall events.
Calidris melanotos	Pectoral Sandpiper	IA	IA	PMST	In Australasia, the Pectoral Sandpiper prefers shallow fresh to saline wetlands. The species is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No suitable habitat for this species is present within the Project Area.
Calidris ruficollis	Red-necked stint	IA	IA	DBCA 2021a	In Australasia, the Red-necked Stint is mostly found in coastal areas, including in sheltered inlets, bays, lagoons and estuaries with intertidal mudflats, often near spits, islets and banks and, sometimes, on protected sandy or coralline shores. Occasionally they have been recorded on exposed or ocean beaches, and sometimes on stony or rocky shores, reefs or shoals.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No suitable habitat for this species is present within the Project Area. A nearby record (2003) is located approximately 15 km to the west-southwest of the Project Area and is associated with the Fitzroy River.

Species	Common name	Conservation status		Source	Habitat information	Pre-survey Likelihood	Pre-survey likelihood justification	Post-survey likelihood	Post-survey likelihood justification
		EPBC Act	BC Act / DBCA						
Calidris subminuta	Long-toed Stint	IA	IA	DBCA 2021a	The Long-toed Stint occurs in a variety of terrestrial wetlands. They prefer shallow freshwater or brackish wetlands including lakes, swamps, river floodplains, streams, lagoons and sewage ponds. The species is also fond of areas of muddy shoreline, growths of short grass, weeds, sedges, low or floating aquatic vegetation, reeds, rushes and occasionally stunted samphire.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No suitable habitat for this species is present within the Project Area. A nearby record (2003) is located approximately 15 km to the west-southwest of the Project Area and is associated with the Fitzroy River.
Cecropis daurica	Red-rumped Swallow	IA	IA	PMST	This species is found in open hilly country and mountains, river gorges, valleys, sea cliffs, as well as in cultivated areas and human habitations, including towns.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No suitable habitat for this species is present within the Project Area.
Charadrius veredus	Oriental plover	IA	IA	DBCA 2021a, Naturemap, PMST	Inhabit flat, open, semi-arid or arid grasslands, where the grass is short and sparse, and interspersed with hard, bare ground, such as claypans, dry paddocks, playing fields, lawns and cattle camps, or open areas that have been recently burnt. At the onset of the Wet Season, some may move into lightly wooded grasslands.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	One record from 2010 occurs 20 km west of the Project Area. Sections of the project area may provide marginally suitable habitat seasonally and after major rainfall events, however majority of records of this species are confined to coastal areas.
Cuculus optatus	Oriental Cuckoo	IA	IA	PMST	Forest, Monsoon forests; wet sclerophyll forests; paperbark swamps; mangroves.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.

		EPBC Act	BC Act / DBCA						
Gelochelidon nilotica	Gull-billed tern	IA	IA	DBCA 2021a	It breeds in a variety of locations with bare or sparsely vegetated islands, banks, flats, or spits of dry mud and sand including barrier beaches (shoals), dunes, saltmarshes, saltpans, freshwater lagoons, estuaries, deltas, inland lakes, rivers, marshes and swamps.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Records are confined to the Fitzroy River.
Glareola maldivarum	Oriental pratincole	IA	IA	DBCA 2021a, Naturemap	Open plains, floodplains or short grassland (including farmland or airstrips), often with extensive bare areas. Terrestrial wetlands, such as billabongs, lakes or creeks, and artificial wetlands such as reservoirs, saltworks and sewage farms, especially around the margins. The species also occurs along the coast, inhabiting beaches, mudflats and islands, or around coastal lagoons.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 50 km west of the Project Area from 2003.
Hirundo rustica	Barn Swallow	IA	IA	PMST	In Australia, the Barn Swallow is recorded in open country in coastal lowlands, often near water, towns and cities. Birds are often sighted perched on overhead wires, and also in or over freshwater wetlands, paperbark Melaleuca woodland, mesophyll shrub thickets and tussock grassland.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.
Hydroprogne caspia	Caspian Tern	IA	IA	DBCA 2021a, Naturemap	The Caspian Tern is mostly found in sheltered coastal embayment (harbours, lagoons, inlets, bays, estuaries and river deltas) and those with sandy or muddy margins are preferred. They also occur on near-coastal or inland terrestrial wetlands that are either fresh or saline, especially lakes (including ephemeral lakes), waterholes, reservoirs, rivers and creeks.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Records are over 40 km away from the Project Area.

Species	Common name	Conservation status		Source	Habitat information	Pre-survey Likelihood	Pre-survey likelihood justification	Post-survey likelihood	Post-survey likelihood justification
		EPBC Act	BC Act / DBCA						
Limicola falcinellus	Broad-billed sandpiper	IA	IA	DBCA 2021a	The Broad-billed Sandpiper occurs in sheltered parts of the coast, favouring estuarine mudflats but also occasionally occur on saltmarshes, shallow freshwater lagoons, saltworks and sewage farms, and in areas with large soft intertidal mudflats, which may have shell or sandbanks nearby.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 50km west of the Project Area from 1979.
Limosa limosa	Black-tailed godwit	IA	IA	DBCA 2021a	The bar-tailed godwit occurs mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It has also been recorded in coastal sewage farms and saltworks, salt lakes and brackish wetlands near coasts, sandy ocean beaches, rock platforms, and coral reef-flats.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 10 km north of the Project Area associated with the Fitzroy River.
Motacilla cinerea	Grey Wagtail	IA	IA	PMST	Inhabits fast-flowing mountain streams and rivers with riffles and exposed rocks or shoals, often in forested areas. It is also found in more lowland watercourses where there are artificial waterfalls, weirs, millraces or lock gates.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.
Motacilla flava	Yellow Wagtail	IA	IA	PMST	Range of damp or wet habitats with low vegetation, from damp meadows, marshes, waterside pastures, sewage farms and bogs to damp steppe and grassy tundra. In the north of its range it is also found in large forest clearings.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area.
Pandion cristatus	Osprey, eastern osprey	IA	IA	DBCA 2021a, PMST	Eastern Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They are mostly found in coastal areas but occasionally travel inland along major rivers, particularly in northern Australia	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Records are over 50 km east and west of the Project Area associated with the Fitzroy River.

Plegadis falcinellus	Glossy ibis	IA	IA	DBCA 2021a, Naturemap	The Glossy Ibis' preferred habitat for foraging and breeding are freshwater marshes at the edges of lakes and rivers, lagoons, floodplains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation. The species is occasionally found in coastal locations such as estuaries, deltas, saltmarshes and coastal lagoons.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	Several records surrounding the project area, with the closest occurring 10 km north. Marginal habitat for this species is present within the Project Area.
Pluvialis fulva	Pacific golden plover	IA	IA	DBCA 2021a, Naturemap	In Australia this species usually inhabits coastal habitats, though it occasionally occurs around inland wetlands. Pacific Golden Plovers usually occur on beaches, mudflats and sandflats (sometimes in vegetation such as mangroves, low saltmarsh such as Sarcocornia, or beds of seagrass) in sheltered areas including harbours, estuaries and lagoons, and also in evaporation ponds in saltworks.	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Two historical records (1978 and 2003) occur over 50 km west and east of the Project Area.
Tringa glareola	Wood sandpiper	IA	IA	DBCA 2021a	The Wood Sandpiper uses well-vegetated, shallow, freshwater wetlands, such as swamps, billabongs, lakes, pools and waterholes. They are typically associated with emergent, aquatic plants or grass, and dominated by taller fringing vegetation, such as dense stands of rushes or reeds, shrubs, or dead or live trees, especially *Melaleuca* and River Red Gums (*Eucalyptus camaldulensis*) and often with fallen timber.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Closest record is 10 km north of the Project Area associated with the Fitzroy River.

Tringa nebularia	Common greenshank	IA	IA	DBCA 2021a, Naturemap, PMST	The Common Greenshank is found in a wide variety of inland wetlands and sheltered coastal habitats of varying salinity. It occurs in sheltered coastal habitats, typically with large mudflats and saltmarsh, mangroves or seagrass. Habitats include embayment, harbours, river estuaries, deltas and lagoons and are recorded less often in round tidal pools, rock-flats and rock platforms	Unlikely	No suitable habitat for this species is present within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Several records 30 km west of the Project Area from 2010.
Tringa stagnatilis	Marsh sandpiper	IA	IA	DBCA 2021a, Naturemap, PMST	The Marsh Sandpiper lives in permanent or ephemeral wetlands of varying salinity, including swamps, lagoons, billabongs, saltpans, saltmarshes, estuaries, pools on inundated floodplains, and intertidal mudflats and also regularly at sewage farms and saltworks. They are recorded less often at reservoirs, waterholes, soaks, bore-drain swamps and flooded inland lakes. In north Australia they prefer intertidal mudflats.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 50 km west of the Project Area.
Mouldingia occidentalis	A camaenid land snail (eastern Napier Ranges)	-	CR	DBCA 2021a	No habitat information is available for this species	Unlikely	Records of this species are 60 km north-east of the Project Area. The most recent records are from 2014.	Unlikely	Records of this species are 60 km north-east of the Project Area. The most recent records are from 2014.
Trichosurus vulpecula arnhemensis (Kimberley)	Northern brushtail possum (Kimberley)	-	VU	DBCA 2021a, Naturemap	It occurs mainly in tall eucalypt open forests with large hollow-bearing trees, particularly where the understorey includes some shrubs that bear fleshy fruits. However, the subspecies also occurs in some mangrove communities (especially where these contain hollow bearing trees).	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 50 km east of the Project Area from 1965.

Westraltrachia alterna	A camaenid land snail (McSherry Gap and Cyclad Hill)	-	VU	DBCA 2021a	No habitat information is available for this species	Unlikely	Records of this species are 60 km north-east of the Project Area. The most recent records are from 2014.	Unlikely	Records of this species are 60 km north-east of the Project Area. The most recent records are from 2014.
Crocodylus johnstoni	Australian freshwater crocodile	-	OS	DBCA 2021a, Naturemap	Various permanent freshwater areas such as lakes, billabongs and swamps, plus less saline upstream areas of river systems and creeks. Marginal populations are found in upstream sandstone escarpment country. Generally, not found near the coast, where the high salinity and competition with the more dominant *C. porosus* makes the habitat far less favourable.	Unlikely	No suitable habitat for this species is present within the Project Area. Majority of nearby records are confined to the Fitzroy River.	Unlikely	No suitable habitat for this species is present within the Project Area. Majority of nearby records are confined to the Fitzroy River.
Falco peregrinus	Peregrine falcon	-	OS	DBCA 2021a, Naturemap	The Peregrine Falcon is found in most habitats, from rainforests to the arid zone, and at most altitudes, from the coast to alpine areas. It requires abundant prey and secure nest sites, and prefers coastal and inland cliffs or open woodlands near water, and may even be found nesting on high city buildings	Potential	Suitable habitat may be present for this species within the Project Area	Potential	This species occurs across a variety of habitats. Several records surround the project area.
Anilios micromma	Small-eyed blind snake (Leopold Downs)	-	P1	DBCA 2021a	Known from only one specimen, collected in 1924 at Leopold Downs Station in semi-arid sw. interior of the Kimberley, WA.	Unlikely	Species is known from two historical records (1900 and 1924) located 95 km east of the Project Area.	Unlikely	Species is known from two historical records (1900 and 1924) located 95 km east of the Project Area.
Anilios troglodytes	Sandamara blind snake (Napier Range)	-	P1	DBCA 2021a	Southern Kimberley, WA, from Napier Range to Kununurra. Tunnel Cave, Napier Range, Western Australia. No habitat information available.	Unlikely	Records of this species are historical (1975) and are located 85 km northeast of the Project Area.	Unlikely	Records of this species are historical (1975) and are located 85 km northeast of the Project Area.

Hannia greenwayi	Greenway's grunter	-	P1	DBCA 2021a, Naturemap	Freshwater streams.	Unlikely	Records are confined to the Fitzroy River.	Unlikely	Records are confined to the Fitzroy River. Creeklines are unlikely to remain inundated throughout the year and would be potentially unsuitable to support a population of this species within the Project Area.
Lerista robusta	Broad-eyed slider (Kimberley)	-	P1	DBCA 2021a	Arid grasslands south of St. George Ranges, southern interior of Kimberley. Known from one population.	Unlikely	Species is known from seven historical records (1989) located 75km south of the Project Area.	Unlikely	Species is known from seven historical records (1989) located 75km south of the Project Area.
Pilsbrycharopa tumida	A charopid land snail (Noonkanbah)	-	P1	DBCA 2021a	No habitat information is available for this species	Unlikely	One record of this species is 30km south of the Project Area in 1988.	Unlikely	One record of this species is 30km south of the Project Area in 1988.
Craterocephalus lentiginosus	Prince Regent hardyhead	-	P2	DBCA 2021a, Naturemap	Found only in the Kimberley region of north Western Australia. Freshwater streams, brackish water.	Potential	May occur within the Fitzroy River tributary occurring within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Records are confined to the Fitzroy River.
Vespadelus douglasorum	Yellow-lipped cave bat	-	P2	DBCA 2021a	Restricted to the Kimberley region and is widespread within this range. The areas in which they forage are streams running through tropical woodland, riparian zones dominated by pandanus and melaleuca trees within the 800 mm isohyet. They roost in limestone and sandstone caves in colonies.	Unlikely	Several historical records (1958 to 1982) 70 km east of the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Several historical records (1958 to 1982) 70 km east of the Project Area.

Westraltrachia lievreana	Le Lievre Ridge camaenid land snail	-	P2	DBCA 2021a	No habitat information is available for this species.	Unlikely	Nearby records are historical.	Unlikely	Two records of this species are 40 km north-east of the Project Area from 1976 and 1986.
Westraltrachia subtila	A camaenid land snail (Ninety Seven Mile Creek)	-	P2	DBCA 2021a	No habitat information is available for this species.	Unlikely	Nearby records are historical.	Unlikely	One record of this species is 60km north-east of the Project Area from 1977.
Ctenotus uber johnstonei	Spotted ctenotus (northeast)	-	P2	DBCA 2021a, Naturemap	The Ctenotus uber group is known to prefer the hard, reddish soils. This skink is known from the arid interior of Western Australia.	Potential	Suitable habitat may be present for this species within the Project Area.	Potential	Several records recorded 15 km west of the project area between 2009 and 2011 and suitable habitat present within the project area.
Petropseudes dahli	Rock ringtail possum, wogoit	-	P3	DBCA 2021a	Rock ringtail possums live in rocky, sandstone outcrops where they are sheltered during the day. At night they move out of their sheltered rock crevices to feed in the trees within the area, often traveling no further than 10 m from their dens. These rocky areas usually are surrounded by flatter, lowland areas. The rocky encampments have increased water holding potential and are sometimes flooded in areas.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Only one record 50 km north of the Project Area.
Rhinonicteris aurantia	Orange leaf-nosed bat	-	P4	DBCA 2021a	Tropical woodland to semi-arid grasslands. During the dry season it roosts in caves, sometimes in large numbers, and disperses in the wet, using other roosts. This species is very selective in choosing hot, humid roosting sites.	Unlikely	Nearby records of this species are historical (1965 to 1980), occurring 40 km north of the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Historical records (1965 to 1980) 40 km north of the Project Area.

Lagorchestes conspicillatus leichardti	Spectacled hare-wallaby (mainland)	-	P4	DBCA 2021a, Naturemap	Open forests, open woodland, tall shrublands, tussock grasslands and hummock grasslands.	Potential	Suitable habitat may be present for this species within the Project Area.	Unlikely	No habitat for this species is present within the Project Area. Closest record is 25 km east from 2011 and only moderately certain.
Leggadina lakedownensis	Northern short-tailed mouse, Lakeland Downs mouse, kerakenga	-	P4	DBCA 2021a, Naturemap	Northern Short-tailed Mice occupy a diverse range of environments from the monsoon tropical coast to semi-arid climates, including spinifex and tussock grasslands, samphire and sedgelands, *Acacia* shrub-lands, tropical *Eucalyptus* and *Melaleuca* woodlands and stony ranges. Most habitats, however, are seasonally inundated on red or white sandy-clay soils.	Potential	Suitable habitat may be present for this species within the Project Area	Potential	Two records recorded 15 km west of the project area in 2011 and suitable habitat present.

Appendix K Fauna species list

Species	Common name	Sign
Birds		
Accipiter fasciatus	Brown Goshawk	Directly observed
Aprosmictus erythropterus	Red-winged Parrot	Directly observed
Aquila audax	Wedge-tailed Eagle	Directly observed
Ardea pacifica	White-necked Heron	Directly observed
Ardeotis australis	Australian Bustard	Directly observed
Artamus cinereus	Black-faced Woodswallow	Directly observed
Artamus personatus	Masked Woodswallow	Directly observed
Cacatua sanguinea	Little Corella	Directly observed
Calyptorhynchus banksii	Red-tailed Black Cockatoo	Heard
Chrysococcyx basalis	Horsfield's Bronze Cuckoo	Heard
Cincloramphus mathewsi	Rufous Songlark	Directly observed
Conopophila rufogularis	Rufous-throated Honeyeater	Directly observed
Coracina novaehollandiae	Black-faced Cuckooshrike	Directly observed
Corvus bennetti	Little Crow	Directly observed
Corvus orru	Torresian Crow	Directly observed
Cracticus nigrogularis	Pied Butcherbird	Directly observed
Dendrocygna eytoni	Plumed Whistling Duck	Directly observed
Egretta novaehollandiae	White-faced Heron	Directly observed
Elseyornis melanops	Black-fronted Dotteral	Directly observed
Eolophus roseicapilla	Galah	Directly observed
Falco berigora	Brown Falcon	Directly observed
Falco subniger	Black Falcon	Directly observed
Geopelia cuneata	Diamond Dove	Directly observed
Geopelia placida	Peaceful Dove	Heard
Grallina cyanoleuca	Magpie-lark	Directly observed
Grus rubicunda	Brolga	Directly observed
Haliastur sphenurus	Whistling Kite	Heard
Lichenostomus penicillatus	White-plumed Honeyeater	Directly observed
Lichenostomus virescens	Singing Honeyeater	Heard
Lichmera indistincta	Brown Honeyeater	Heard
Malurus coronatus	Purple-crowned Fairywren	Directly observed
Malurus lamberti	Variegated Fairywren	Directly observed
Malurus melanocephalus	Red-backed Fairywren	Directly observed
Manorina flavigula	Yellow-throated Miner	Directly observed

Threatened and Priority Flora Report Form

Version 1.4 March 2021

Please complete as much of the form as possible, with emphasis on those sections bordered in black. For information on how to complete the form please refer to the Threatened & Priority Flora Report Form (TPRF) manual on the DBCA website at www.dpaw.wa.gov.au/plants-and-animals/threatened-species-and-communities/threatened-plants

TAXON: Nymphoides beaglensis **TPFL Pop. No:**

OBSERVATION DATE: 03/04/2021 **CONSERVATION STATUS:** P3 **New population** ☐

OBSERVER/S: E. Chetwin, J. Cargill **PHONE** (08) 6218 2096

ROLE: Botanist **ORGANISATION:** Eco Logical Australia

EMAIL: EmilyC@ecoaus.com.au

DESCRIPTION OF LOCATION (Provide at least nearest town/named locality, and the distance and direction to that place)**:**

ca. 55km west-southwest of Fitzroy Crossing

Reserve No:

DBCA DISTRICT: West Kimberley **LGA:** Shire of Derby/West Kimberley Land manager present: ☐

DATUM:
GDA94 / MGA94 x
AGD84 / AMG84 ☐
WGS84 ☐
Unknown ☐

COORDINATES: (If UTM coords provided, **Zone** is also required)
DecDegrees ☐ DegMinSec ☐ UTMs x
Lat / Northing: 7977409
Long / Easting: 716841
ZONE: 51

METHOD USED:
GPS x Differential GPS ☐ Map ☐
No. satellites: Map used:
Boundary polygon captured: ☐ Map scale:

LAND TENURE:
Nature reserve ☐ Timber reserve ☐ Private property ☐ Rail reserve ☐ Shire road reserve ☐
National park ☐ State forest ☐ Pastoral lease ☐ MRWA road reserve ☐ Other Crown reserve ☐
Conservation park ☐ Water reserve ☐ UCL ☐ SLK/Pole _____ to _____ Specify other:

AREA ASSESSMENT: Edge survey ☐ Partial survey x Full survey ☐ Area observed (m²): 900

EFFORT: Time spent surveying (minutes): No. of minutes spent / 100 m²:

POP'N COUNT ACCURACY: Actual ☐ Extrapolation ☐ Estimate x Count method: (Refer to field manual for list)

WHAT COUNTED: Plants x Clumps ☐ Clonal stems ☐

TOTAL POP'N STRUCTURE:	**Mature:**	**Juveniles:**	**Seedlings:**	**Totals:**
Alive	50			50
Dead				

Area of pop (m²):
Note: Pls record count as numbers (not percentages) for database.

QUADRATS PRESENT: No. Size Data attached ☐ Total area of quadrats (m²):

Summary Quad. Totals: Alive				

REPRODUCTIVE STATE: Clonal ☐ Vegetative ☐ Flowerbud ☐ Flower x
Immature fruit ☐ Fruit ☐ Dehisced fruit ☐ Percentage in flower: %

CONDITION OF PLANTS: Healthy x Moderate ☐ Poor ☐ Senescent ☐

COMMENT:

THREATS - type, agent and supporting information: Eg clearing, too frequent fire, weed, disease. Refer to field manual for list of threats & agents. **Specify agent** where relevant. Rate current and potential threat impact: N=Nil, L=Low, M=Medium, H=High, E=Extreme Estimate time to potential impact: S=Short (<12mths), M=Medium (<5yrs), L=Long (5yrs+)	**Current impact (N-E)**	**Potential Impact (L-E)**	**Potential Threat Onset (S-L)**

Threatened and Priority Flora Report Form

Version 1.4 March 2021

HABITAT INFORMATION:

LANDFORM:
Crest ☐
Hill ☐
Ridge ☐
Outcrop ☐
Slope ☐
Flat ☐
Open depression ☐
Drainage line ☐
Closed depression x
Wetland ☐

ROCK TYPE:
Granite ☐
Dolerite ☐
Laterite ☐
Ironstone ☐
Limestone ☐
Quartz ☐
Specify other: _____

LOOSE ROCK:
(on soil surface; eg gravel, quartz fields)
0-10% ☐
10-30% ☐
30-50% ☐
50-100% ☐

SOIL TYPE:
Sand ☐
Sandy loam ☐
Loam ☐
Clay loam ☐
Light clay ☐
Peat ☐
Specify other: _____

SOIL COLOUR:
Red ☐
Brown ☐
Yellow ☐
White ☐
Grey ☐
Black ☐
Specify other: _____

DRAINAGE:
Well drained ☐
Seasonally inundated x
Permanently inundated ☐
Tidal ☐

Specific **Landform** Element: _____
(Refer to field manual for additional values)

CONDITION OF SOIL: Dry ☐ Moist ☐ Waterlogged ☐ Inundated x

VEGETATION CLASSIFICATION*:
Eg: **1**. Banksia woodland (B. attenuata, B. ilicifolia); **2**. Open shrubland (Hibbertia sp., Acacia spp.) ; **3**. Isolated clumps of sedges (M.tetragona)

1. Corymbia bella, Eucalyptus coolabah mid open woodland
2. Acacia colei, Lophostemon grandiflorus subsp. riparius, Sesbania cannabina tall sparse shrubland
3. Triodia bitextura low open hummock grassland
4. Aristida hygrometrica, Eriachne obtusa low sparse grassland.

ASSOCIATED SPECIES:
Other (non-dominant) spp

Arivela viscosa, Corchorus sidoides subsp. sidoides, Dolichandrone occidentalis, Eragrostis eriopoda, Evolvulus alsinoides var. villosicalyx, Fimbristylis ferruginea, Indigofera linifolia, Marsilea hirsuta, Nymphoides beaglensis (P3), Peplidium muelleri, *Stylosanthes hamata.

* Please record up to four of the most representative vegetation layers (with up to three dominant species in each layer). Structural Formations should follow 2009 *Australian Soil and Land Survey Field Handbook* guidelines – refer to field manual for further information and structural formation table.

CONDITION OF HABITAT: Pristine ☐ Excellent x Very good ☐ Good ☐ Degraded ☐ Completely degraded ☐

COMMENT:

FIRE HISTORY: **Last Fire:** Season/Month: _____ Year: _____ **Fire Intensity:** High ☐ Medium ☐ Low ☐ No signs of fire ☐

FENCING: Not required ☐ Present ☐ Replace / repair ☐ Required ☐ Length req'd: _____

ROADSIDE MARKERS: Not required ☐ Present ☐ Replace / reposition ☐ Required ☐ Quantity req'd: _____

OTHER COMMENTS: (Please include recommended management actions and/or implemented actions - include date. Also include details of additional data available, and how to locate it.)

FLORA AUTHORISATION / LICENCE No: FB62000026-3 Note if only observing plants (i.e. no specimens or plant matieral is taken) then no authorisation/licence is required. For further information on authorisation and licening requirements see the Threatened Flora and Wildlife Licensing pages on DBCA's website. Any actions carried out under authorisations/licences should be recorded above in the OTHER COMMENTS section.

SPECIMEN: Collectors No: EC975 WA Herb. ☐ Regional Herb. ☐ District Herb. ☐ Other: _____

LODGEMENT: WA Herb Lodgement No: _____

ATTACHED: Map ☐ Mudmap ☐ Photo x3 GIS data ☐ Field notes ☐ Other: Additional locations

COPY SENT TO: Regional Office ☐ District Office ☐ Other: _____

1 Summary

This Valhalla Monitoring Plan (VMP) has been prepared by Bennett Resources (BNR) to support the assessment, approval, and implementation of the Valhalla Gas Exploration and Appraisal Program (the Proposal) under Part IV of the *Environmental Protection Act 1986* (EP Act). With the exception of groundwater quality, this VMP presents information for all monitoring scopes proposed for the Proposal, specifically soil quality, air quality, methane emissions and Naturally Occurring Radioactive Material (NORM). The groundwater quality monitoring scope, criteria, indicators and relevant management measures have been presented in the BNR Groundwater Management Plan (BNR_HSE_MP_015) included in the Proposal's Environmental Review Document (ERD) (BNR_HSE_MP_013).

Bennett Resources referred the Proposal to the Environmental Protection Authority (EPA) under Part IV of the EP Act on 24 December 2020 (EPA Assessment Number 2281). The EPA set the level of assessment for the Proposal as Public Environmental Review. The ERD is to include environmental impact assessment and management information, including this VMP which will be subject to an 8-week public review period.

A summary of the VMP is provided in Table 1-1.

Table 1-1: Summary of the Proposal and associated Valhalla Monitoring Plan

Proposal title	Valhalla Gas Exploration and Appraisal Program (EPA Assessment Number 2281)
Proponent name	Bennett Resources Pty Ltd
Ministerial Statement number	The Proposal is currently being assessed by the EPA (Assessment 2281) and a Ministerial Statement and associated proposal implementation conditions are yet to be issued.
Purpose of the VMP	The purpose of this VMP is to detail the monitoring requirements along with response actions for trigger and threshold criteria that are required to be implemented for the duration of the Proposal.
EPA key environmental factors and objectives, and VMP outcomes	**Soil quality monitoring program** Terrestrial Environmental Quality – EPA Objective: *To maintain the quality of land and soils so that environmental values are protected.* VMP outcomes: No short or long-term adverse impacts to soil quality. **Air quality monitoring program** Air Quality – EPA Objective: *To maintain air quality and minimise emissions so that environmental values are protected.* VMP outcomes: No short or long-term adverse impacts to air quality. **Methane emissions monitoring program:** Methane Emissions – EPA Objective: *To reduce net greenhouse gas emissions in order to minimise the risk of environmental harm associated with climate change.* VMP outcomes: No short or long-term adverse impacts to air quality. **NORM monitoring program** Human Health – EPA Objective: *To protect human health from significant harm.* VMP outcomes: No short or long-term adverse impacts to human health.
Key components in the VMP	The key provisions of this VMP are, where relevant: • localised baseline monitoring • activity monitoring • surveillance monitoring • trigger and threshold criteria and subsequent response actions • annual reporting (including results of monitoring).

Proposed commencement date	TBC
VMP required pre-construction ?	Yes ☐ No ☒

2 Context, scope and rational

2.1 Proposal

The Proposal is to complete an unconventional exploration and appraisal drilling and Hydraulic Fracture Stimulation (HFS) program within Petroleum Exploration Permit EP 371 (EP 371) in the Canning Basin, within the Shire of Derby / West Kimberley in Western Australia (WA). The intent of the Proposal is to evaluate the large tight gas resource in the region which has the potential to offer long-term energy security to Australia. The onshore Canning Basin is an early Ordovician to early Cretaceous aged geological basin that covers approximately 430,000 km^2 in the West Kimberley region. The Proposal is targeting hydrocarbons present from the Laurel through to the Devonian Formations, ranging from 2,000 m to 5,000 m below ground level. The main target is the Laurel Formation, with hydrocarbons present at depths between 2,000 m and 4,000 m below ground level. Table 2-1 provides a summary of the proposal.

Table 2-1: Summary of the Proposal

Proposal title	Valhalla Gas Exploration and Appraisal Program
Proponent name	Bennett Resources Pty Ltd (BNR)
Short description	The Proposal is to undertake an unconventional exploration and appraisal drilling program within EP 371, located in the Canning Basin, West Kimberley of Western Australia. The Proposal involves constructing up to 20 exploration wells within 10 well sites. The intent of the Proposal is to further explore and appraise the extent of the tight gas reservoirs present from the Laurel through to the Devonian Formations, at depths ranging from 2,000 m to 5,000 m below ground level. The total area of the physical disturbance footprint for the Proposal is ~112 ha, including some previously disturbed areas and proposed clearing. The estimated maximum amount of clearing for the Proposal is ~110 ha and comprises: • well sites ~40.1 ha • access Tracks ~59.1 ha • camps ~2.8 ha. The exploration and appraisal program are expected to commence in 2024.

2.2 Key environmental factors

Several activities have been identified as having the potential to affect key environmental factors. There have been summarised in the tables below for each relevant EPA factor.

Table 2-2: Summary of key environmental factor – Terrestrial Environmental Quality

EPA objective	To maintain the quality of land and soils so that environmental values are protected.
Policy and guidance	• Environmental Key Factor Guideline – Terrestrial Environmental Quality (EPA 2016a) • National Environment Protection Council (NEPC) (1999). Assessment of Site Contamination Measure (NEPM), Schedule B (1) – Guideline on the Investigation Levels for Soil and Groundwater (NEPC 1999)
Project activities	• site preparations, including ground disturbance • drilling • gas exploration method (unconventional)
Environmental values / receptors	• pastoral station (existing land-use)
Potential impacts – direct impacts	N/A
Potential impacts – indirect impacts	• erosion or scouring from a reduction in soil stability during civil works • inadequate rehabilitation arising from compaction.

	• contamination of land and soils from surface spills.

Table 2-3: Summary of key environmental factor – Air Quality

EPA objective	To maintain air quality and minimise emissions so that environmental values are protected.
Policy and guidance	• Environmental Key Factor Guideline – Air Quality (EPA 2021) • Environmental Protection Act 1986 (WA) • NEPC National Environment Protection (Ambient Air Quality) Measure (NEPM) (NEPC 2016) • National Environment Protection (Air Toxics) Measure (NEPC 2004)
Project activities	• site preparation and site reinstatement • well drilling • well testing
Environmental values / receptors	• local airshed • local Aboriginal communities – Yungngora and Jimbalakudunj Communities.
Potential impacts – direct impacts	N/A
Potential impacts – indirect impacts	• reduction in air quality causing impacts to sensitive social receptors • increased dust generation resulting in deposition impacts to flora and vegetation.

Table 2-4: Summary of key environmental factor – GHG Emissions

EPA objective	To reduce net greenhouse gas emissions in order to minimise the risk of environmental harm associated with climate change.
Policy and guidance	• Environmental Key Factor Guideline – Greenhouse Gas Emissions (EPA 2020) • Environmental Protection Act 1986 (WA) (EP Act) • National Greenhouse and Energy Reporting Act 2007 (NGER Act) (Commonwealth).
Project activities	• land clearing • fuel usage during all activities • flaring during well testing • fugitive emissions.
Environmental values / receptors	• local airshed
Potential impacts – direct impacts	• contribution to GHG emissions.
Potential impacts – indirect impacts	N/A

Table 2-5: Summary of key environmental factor – Human Health

EPA objective	To protect human health from significant harm.
Policy and guidance	• Environmental Key Factor Guideline – Human Health (EPA 2016b).
Project activities	• well drilling • well testing
Environmental values / receptors	• local soil quality • local airshed • human receptors in the surrounds of the well sites

Potential impacts – direct impacts	• industrial processes that result in the build-up and release of radioactive substances or emissions.
Potential impacts – indirect impacts	N/A

2.3 Condition requirements

The Proposal is currently being assessed by the EPA (Assessment 2281) and a Ministerial Statement and associated proposal implementation conditions are yet to be issued.

2.4 Rationale and approach

2.4.1 Environmental outcomes

The overall purpose of this VMP is to quantify the potential environmental impacts and risks associated with the Proposal activities. In meeting this objective, BNR will be able to verify the outcomes of the ERD which state that the impacts and risks are not significant given the manner in which the Proposal is planned to be implemented.

Based upon the monitoring programs selected for the Proposal, an outcome-based approach has been selected given the ability to collect quantitative data that enables unbiased scientific analysis to be completed. Further to this, quantitative environmental and health indicators exist for the environmental factors detailed in this plan, enabling outcomes to be selected for the Proposal.

Consequently, the following outcomes have been defined for this VMP:

- no short or long-term adverse impacts to soil quality
- no short or long-term adverse impacts to air quality
- no short or long-term adverse impacts to human health.

2.4.2 Key assumptions and uncertainty

A number of assumptions have been made and uncertainties observed in the development of this VMP. These are detailed in Table 2-6.

Table 2-6: Assumptions and uncertainties

Regulatory uncertainty	Since the lifting of the moratorium into HFS, the Proposal is the first project that is subject to assessment under the EP Act under the new provisions. Given the project is the first of its kind post moratorium, there is uncertainty regarding EPA and WA government expectations for the project. This has been managed as best as possible through engagement with various government departments and through implementing a conservative monitoring approach (detailed in this VMP).
Code of Practice for HFS activities has not yet been completed	BNR understands that the Code of Practice, which is not currently publicly available, will contain more detail around the monitoring requirements for unconventional oil and gas projects. However, in the absence of the Code of Practice, BNR has tried to manage the uncertainty and assumptions in the development of this VMP following various engagements with different decision-making authorities (DMAs) and subject matter experts. These are detailed in Section 5.

2.4.3 Rational for choice of indicators

Following engagement with various DMAs and as required by the ESD, ecological and social environmental values have been identified for protection within the Development Envelope. To support these values three environmental outcomes have been defined for this VMP (Section 2.4.1).

For each relevant environmental outcome, a set of indicators have been established to provide the environmental quality benchmarks against which environmental quality and the performance of environmental management can be measured. These indicators are quantitative and are described numerically. The key to

successful environmental management is to maintain environmental quality within the bounds described by the indicators, thereby achieving the environmental quality outcomes and ensuring the environmental values continue to be supported.

Indicators have been selected through reviewing a range of industry standards, guidelines and scientific papers. Although these are detailed in the relevant programs, a summary of the documentation that BNR used to identify indicators for the various programs is detailed in Table 2-7.

Table 2-7: Indicator rationale

Program	Reference	Summary
Soil Quality	NEPC (1999). Assessment of Site Contamination Measure (NEPM), Schedule B (1) – Guideline on the Investigation Levels for Soil and Groundwater (NEPC 1999)	Provides: • a comprehensive list of analytes that BNR plans to sample at each well site • ecological screening levels and ecological investigation levels are presented for some of the constituents.
	Botta, C (2015). Understanding your soil test - Step by Step. Yea River Catchment Landcare Group (Botta 2015)	Provides: • information to assist land managers in understanding and interpreting soil test data • chloride critical levels for different types of soil where plant damage can occur.
	DEC (2010). Assessment levels for Soil, Sediment and Water. Contaminated Sites Management Series. Department of Environment and Conservation (DEC 2010)	Provides: • a comprehensive list of analytes that BNR plans to sample at each well site • ecological screening levels and ecological investigation levels are presented for some of the constituents • the source of these screening and investigation levels.
Air Quality	NEPC (2016). National Environment Protection (Ambient Air Quality) Measure. National Environment Protection Council (NEPC 2016)	Provides: • a list of air pollutants that BNR plans to sample for the Proposal • maximum concentration standards are presented for some of the air pollutants BNR plans to sample.
	NEPC (2004). National Environment Protection (Air Toxics) Measure. National Environment Protection Council (NEPC 2004)	Provides: • a list of air pollutants that BNR plans to sample for the Proposal • monitoring investigation levels are presented for some of the air pollutants BNR plans to sample.
	DWER (2019). Air emissions - draft guideline. Department of Water and Environmental Regulation (DWER 2019)	Provides: • a comprehensive list of substances and associated air quality guideline values (maximum ambient concentrations) • the maximum ambient concentrations for an air pollutant planned to be sampled by BNR.
	EPA NSW (2016). Approved methods for the modelling and assessment of air pollutants in New South Wales. Sydney: Department of Environment and Conservation (EPA NSW 2016)	Provides: • a comprehensive list of individual toxic air pollutants • the pollutants' impact assessment criteria, used as guideline values in other referenced sources in the VMP.
	WHO (2010). WHO guidelines for indoor air quality: selected pollutants. World Health Organization (WHO 2010)	Provides: • indoor air quality guideline values for selected pollutants, which have been used by BNR where health or environmental values were available.

Methane Emissions	Monitoring program laboratory reports	Provide: • laboratory limits of reporting, which have been used by BNR as indicators for trigger and threshold monitoring criteria, where no guideline values were available.
NORM	NCRP (1999). Report No. 129: Recommended screening limits for contaminated surface soil and review of factors relevant to site-specific studies. National Council on Radiation Protection and Measurements (NCRP 1999)	Provides: • a list of radionuclides which can be encountered in contaminated surface soils • screening limits (screening reference levels) for contaminated surface soils.
	APPEA. 2002. Guidelines for Naturally Occurring Radioactive Materials. Australian Petroleum Production & Exploration Association Limited (APPEA 2002)	Provides: • monitoring and management guidance of occupational radiation exposures • A radium trigger level for material.

3 VMP components

3.1 Soil quality

The EPA objective for Terrestrial Quality is:

- to maintain the quality of land and soils so that environmental values are protected.

BNR does not believe that the Proposal activities will result in any significant impacts to soil quality. Subsequently, the soil quality monitoring program has been developed to meet the following objective:

- no short or long-term adverse impacts to soil quality.

To understand if the Proposal and associated emissions have had any short or long-term adverse impacts to soil quality, BNR collected initial soil samples prior to submitting the draft ERD and followed up with the collection of localized samples in August 2023.

In addition, BNR will collect soil samples and analyse local soil quality at all well sites associated with the Proposal located within the Development Envelope and compare these to the earlier soil collections to finalise a pre-impact baseline. Pre-impact and post activity sampling can then be used to demonstrate upon completion of the activities that no contamination events occurred, or that contamination events occurred, and the area was appropriately rehabilitated. In completing this monitoring program, BNR can verify if the Proposal was undertaken in a manner that maintained the quality of land and soils such that that environmental and social values were protected.

3.1.1 Sample location and frequency

The proposed soil quality monitoring program (including the location and frequency) is detailed in Table 3-1.

Table 3-1: Soil quality monitoring location and frequency

Monitoring type	Location	Phase	Frequency	Number of samples
Pre-impact (profile)	At each well site	Post vegetation clearing and prior to well site sheeting.	Once only. BNR considers that the program will provide sufficient data to complement existing data sets and detail soil profile across the Development Envelope.	One profile will be taken at each well site.
Pre-impact (quality)	At each well site	Post vegetation clearing and prior to well site sheeting.	Once only. BNR considers that the program will provide sufficient data to complement existing data sets and confirm existing soil quality. Soil quality is not affected by seasonal conditions.	At least three samples will be taken at each well site.
Activity (quality)	Flare pit Mud Sump	Prior site reinstatement.	Once only. BNR considers that one sample at these locations will provide sufficient data to confirm if soil quality is suitable to undertake site reinstatement activities.	• Three soil samples to be collected from beneath the flare pit sump tank (0 m deep). • Four samples from the surrounding internal flare pit base (<0.5 m deep). • Two samples of native soils from the flare pit base beneath the gravel ballast material (as appropriate > 0.5m deep). • Three soil samples to be collected from beneath the mud sump (0 m deep). The number of samples were based upon the size of

				infrastructure being investigated and the risk profile of the infrastructure. Where samples indicate contamination has occurred, additional sampling will be undertaken at different locations (and depths) to understand the extent of potential contamination and remediation required.
	Spill Location	Post recovery of contaminated soils	In the event of a Level 2 or 3 spill event in accordance with the OSCP (i.e. a large spill event).	Soil samples will be taken beneath the recovered contaminated soil. Where soil samples provide evidence of contamination, additional soil is to be removed/ recovered, and additional samples collected. This will be repeated until the soil samples indicate a lack of contamination

3.1.2 Sampling methodology

Soil profiles will be manually collected by auger or shovels (or equivalent) such that soil horizons can be identified. Soil samples will be manually collected by auger or shovels (or equivalent) and analysed by a laboratory using NATA accredited methods.

3.1.3 Soil quality indicators

The NEPC Assessment of Site Contamination Measure (NEPM), Schedule B (1) – Guideline on the Investigation Levels for Soil and Groundwater (1999) (NEPC 1999) presents a comprehensive list of analytes that has been used and that BNR will use in the future to sample at each well site. As detailed in the ERD, BNR has identified the following fluids as having the potential to impact soil quality:

- hydrocarbons (diesel spill event)
- drilling fluids / cement (surface spill event)
- HFS fluids (surface spill event)
- produced formation water (PFW) (spill event).

On this basis, the following analytes have been identified for the Proposal to be used as indicators of spill events:

- barium
- cadmium
- chloride
- chromium III
- Total Petroleum Hydrocarbons (TPH).

These will serve as indicators to identify if a release has occurred and trigger a more detailed analysis of all CoPCs.

The Assessment of Site Contamination Measure (NEPC 1999) provides a guideline in which ecological screening levels and ecological investigation levels are presented for some of these analytes. The ecological screening levels and ecological investigation levels will be used as the indicators for this soil monitoring program and are detailed in Table 3-2.

Table 3-2: Soil quality analytes and indicators

Analyte	Indicators
Barium	300 mg/kg (NEPC 1999)
Cadmium	3 mg/kg – Environmental (NEPC 1999)
Chloride	No environmental or health guidelines have been defined for chloride, as such the indicator has been set to the chloride critical level for sands to sandy loam where plant damage can occur: 120 mg/kg (Botta 2015)
Chromium III	400 mg/kg (NEPC 1999)
TPH (C10-C14)	500 mg/kg (DEC 2010)
TPH (C15-C18)	1000 mg/kg (DEC 2010)
TPH (C6-C9)	100 mg/kg (DEC 2010)

Table 3-3: VMP components – soil quality

EPA factor/s and objective/s	To maintain environmental quality and to minimise the risk of environmental harm, so that environmental values are protected			
Outcome/s	No short or long-term changes to soil quality			
Key environmental values	Pastoral station (existing land-use)			
Key impacts and risks	Contamination of land and soils from surface spills			
Indicators	**Response actions**	**Monitoring**	**Frequency**	**Reporting**
Trigger criteria Impact vs control analysis [1] indicates no significant deviation from baseline soil quality samples	**Trigger level actions** Within 60 days of exceedance: • identify the reason for the exceedance and determine direct correlation to construction / ongoing activities or natural variation and review management measures with an adaptive management response • re-examine monitoring results (QA/QC) to validate data • conduct additional sampling/monitoring if required.	Refer to Table 3-1	Refer to Table 3-1	Routine reporting - annual reporting through the DEMIRS Annual Environmental Report (AER) Exceedance reporting to EPA compliance branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.
Threshold criteria Exceedance of soil indicators (Table 3-2)	**Threshold contingency actions** Within 30 days of exceedance initiate implementation of contingency measures including: • re-examine monitoring results (QA / QC) to validate data. Re-monitor if required • ground truth the monitoring results to validate findings of the assessment and/or determine/identify what may be causing the exceedance. Where cause is identified during ground truthing and can be rectified, undertake action immediately. For actions which require alternate resources, schedule works to be undertaken as soon as possible • where the threshold exceedance was not caused by construction or project activities, resume standard monitoring frequency • where the threshold exceedance can be attributed to project activities: o implement adaptive management response that may then require: ▪ remediation of soil to commence as required ▪ soil to be disposed offsite ▪ conduct additional sampling / monitoring if required, until a trend back to baseline levels has been demonstrated **and** at least two consecutive results reflect no significant deviation from ambient (baseline) samples.	Refer to Table 3-1	Refer to Table 3-1	

[1] Given the limited data that is planned to be collected, BNR propose an Impact versus Control approach to assess impacts. BNR plans to collect control samples at each well site prior to construction activities commencing which will enable natural variation at each site to be understood.

3.2 Air quality

The EPA objective for Air Quality is:

- to maintain air quality and minimise emissions so that environmental values are protected.

BNR does not believe that the Proposal activities will result in any significant impacts to air quality. Subsequently, the air quality monitoring program has been developed to meet the following objective:

- no short or long-term adverse impacts to air quality.

To understand if the Proposal and associated emissions have had any short or long-term adverse impacts to air quality, BNR plans to collect air quality samples and analyse for presence of dust and volatile organic carbon (VOC). Pre-impact (baseline) and post activity sampling can then be used to demonstrate upon completion of the activities that no short or long-term impacts to air quality have occurred. In completing this monitoring program, BNR can verify if the Proposal was undertaken in a manner that maintained the quality of air such that that environmental and social values were protected.

3.2.1 Sampling location and frequency

The proposed air quality monitoring program (including the location and frequency) is detailed in Table 3-4.

Table 3-4: Air quality monitoring location and frequency

Monitoring type	Location	Phase	Frequency	Number of samples
Project activities	Downwind on the edge of the well site (or as near to the well site as is safe) At the Nidavellir and Jotunheim well sites (well sites closest to sensitive receptors)	During drilling and HFS	Continuous monitoring station instrument for particulate matter (PM) during drilling and HFS (March-November)	One monitoring station continuously recording hourly PM samples.
	On the edge of the well site (or as near to the well site as is safe) downwind from the proppant storage area, well head, and flare pit. At the Nidavellir and Jotunheim well sites (well sites closest to sensitive receptors)		24-hour VOC canister / location (monthly)	Three VOC canisters positioned in an impact gradient position to understand concentration dispersion over time.
	On the edge of the well site (or as near to the well site as is safe) downwind from the flare At the Nidavellir and Jotunheim well sites (well sites closest to sensitive receptors)		30-day dust deposition gauges (DDGs) / location (monthly)	Three DDGs.
	At existing baseline locations (named AQ_CN and AQ_CS) with a line-of-sight to two closest communities (sensitive receptors)	During drilling and HFS	• continuous monitoring station instrument for PM / location (March-November) • 24-hour VOC canister / location (monthly) • 30-day DDG / location (monthly)	• one monitoring station continuously recording hourly PM samples near each community • one DDG located at each monitoring station • one VOC canister at each monitoring location.

3.2.2 Sampling methodology

3.2.2.1 Dust

BNR plans to continue collecting dust samples using DDGs over an exposure time of 30 days, with the samples analysed by a NATA-accredited laboratory. This method measures dust deposition rate and involves the passive deposition and capture of dust within a funnel and bottle arrangement, thus determining the relative 'dustiness' of the sampling sites.

BNR will continue collecting and analysing PM_{10} and $PM_{2.5}$ using continuous light scattering instruments within air quality monitoring stations. By drawing a constant flow rate of ambient air through a filter, this method determines average dust concentrations over a 24-hour period. Coupled with wind records or collected wind data, this method enables determination of dust levels from a particular event or source. It also provides an indication of the potential health effects of the dust given it measures fine and very fine particles present in the atmosphere.

3.2.2.2 Volatile organic compounds

BNR plans to continue collecting VOCs using 24-hour canisters, in accordance with the *Compendium Method TO-15 – Determination of volatile organic compounds in air collected in specially prepared canisters and analysed by gas chromatography / mass spectrometry* (US EPA 1999), with the samples analysed by a NATA-accredited laboratory. Ambient air is admitted into the canister (under vacuum) using a calibrated passive air flow sampler, at a controlled rate over the set period of 24-hours, to obtain a time integrated, whole-air sample. Selected air toxics will then specifically be measured from the collected air in the laboratory. This method provides ambient concentrations of known pollutants present in air, thus enabling the assessment of the potential for risks to human and ecological health.

The location of VOC sampling will include the same sensitive receptor locations as the previously taken baseline samples, to provide directly comparable samples for the trigger and threshold criteria presented in Table 3-6. VOC samples will also be taken on site, with the canisters located in proximity and downwind of the project activities in a manner to understand concentration dispersion over time.

3.2.3 Air quality indicators

Consistent with advice provided throughout the ESD and ERD process, BNR has identified the following analytes to be used in the air quality monitoring program:

- PM_{10}
- $PM_{2.5}$
- total insoluble matter (ash content + combustible matter)
- benzene
- toluene
- ethylbenzene
- total xylenes (as a total of meta-, para- and ortho-xylene)
- naphthalene.

The National Environment Protection Council (NEPC)'s National Environment Protection (Ambient Air Quality) Measure (NEPM) (NEPC 2016), and the National Environment Protection (Air Toxics) Measure (NEPC 2004), provide standards (criteria) for PM_{10} and $PM_{2.5,}$ and monitoring investigation levels for VOCs, respectively. It should be noted that the monitoring investigation level values for VOCs are levels of air pollution below which lifetime exposure, or exposure for a given averaging time, does not constitute a significant health risk. If these limits are exceeded in the short-term it does not mean that adverse health effects automatically occur (NEPC 2004). The indicators for air analytes from other sources are also provided in Table 3-5.

Table 3-5: Air quality analytes and indicators

Analyte	Indicators (health / amenity)
PM_{10}	50 µg/m^3 (24-hour average) – Health (NEPC 2016)
$PM_{2.5}$	25 µg/m^3 (24-hour average) – Health (NEPC 2016)
Total insoluble matter (= ash content + combustible matter)	4 g/m^2/30 days (maximum) – Amenity (EPA NSW 2016) 2 g/m^2/30 days (above background) – Amenity (EPA NSW 2016)
Benzene	0.003 ppm (annual average) – Health (NEPC 2004)
Toluene	1 ppm (24-hour average) – Health (NEPC 2004)
Ethylbenzene	1.8 ppm (1-hour average) – Health (DWER 2019, EPA NSW 2016)
Total Xylenes (as a total of meta-, para- and ortho-Xylene)	0.25 ppm (24-hour average) – Health (NEPC 2004)
Naphthalene	Currently there is no available health guideline for naphthalene in ambient air. As such, the World Health Organization (WHO) indoor air guideline was selected as the indicator for the air quality monitoring program. 0.01 mg/m^3 (annual average) – Health (WHO 2010)

Table 3-6: VMP components – air quality

EPA factor/s and objective/s	To maintain air quality and minimise emissions so that environmental values are protected			
Outcome/s	No short or long-term changes to air quality			
Key environmental values	Aboriginal communities			
Key impacts and risks	Reduction in air quality causing impacts to sensitive social receptors			
Indicators	**Response actions**	**Monitoring**	**Frequency**	**Reporting**
Trigger criteria Impact vs control analysis [2] indicates significant deviation from ambient air quality samples.	**Trigger level actions** Within 60 days of exceedance: • identify the reason for the exceedance and determine direct correlation to drilling/HFS or natural variation and review management measures with an adaptive management response • re-examine monitoring results (QA/QC) to validate data • conduct additional sampling / monitoring if required until a trend back to baseline levels has been demonstrated and at least two consecutive results reflect no significant deviation from ambient (baseline) samples.	Refer to Table 3-4	Refer to Table 3-4	Routine reporting - annual reporting (AER)
Threshold criteria Exceedance of air quality indicators (Table 3-5)	**Threshold contingency actions** Within 30 days of exceedance initiate implementation of contingency measures including: • re-examine monitoring results (QA/QC) to validate data. Re-monitor if required until a trend has been demonstrated • ground truth the monitoring results to validate findings of the assessment and/or determine/identify what may be causing the exceedance. Where cause is identified during ground truthing and can be rectified, undertake action immediately. For actions which require alternate resources, schedule works to be undertaken as soon as possible • where the threshold exceedance was not caused by drilling/HFS, resume standard monitoring frequency • where the threshold exceedance can be attributed to the Proposal activities: o implement adaptive management response that may then require: ▪ for dust and particulate matter: ➢ augment dust suppression through use of water cart ➢ review and adapt the storage and transportation method of proppant sand on site ▪ for VOCs:	Refer to Table 3-4	Refer to Table 3-4	Exceedance reporting to EPA compliance branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.

[2] BNR proposes an Impact versus Control approach to assess impacts. BNR plans to utilise existing baseline data from across the Development Envelope on the assumption that natural variation locally is likely to be limited, this approach is considered suitable.

	➢ increase the distance between the sampling locations and re-characterise the extent of exposure from the activities ➢ consider communicating exclusion zones around the well site to prevent exposure ▪ conduct additional sampling/monitoring if required until a trend back to baseline levels has been demonstrated and at least two consecutive results reflect no significant deviation from ambient (baseline) samples .			

3.3 Methane emissions

The EPA objective for GHG Emissions is:

- To reduce net greenhouse gas emissions in order to minimise the risk of environmental harm associated with climate change.

BNR does not believe that the Proposal activities will result in a significant contribution to GHG emissions that will lead to environmental harm. Subsequently, the methane emissions monitoring program has been developed to meet the following objective:

- Verity that the Proposal and associated emissions have not had any short or long-term adverse impacts to air quality.

To understand if the Proposal and associated emissions have had any short of long-term adverse impacts to air quality, BNR plans to collect air quality samples and analyse for presence of methane. Pre-impact and post activity sampling can then be used to demonstrate upon completion of the activities that no short or long-term impacts to air quality have occurred. In completing this monitoring program, BNR can verify if the Proposal was undertaken in such a manner that reduced methane emissions in order to minimise the risk of environmental harm associated with climate change.

3.3.1 Sampling location and frequency

The proposed methane emissions monitoring program (including the location and frequency) is detailed in Table 3-7.

Table 3-7: Methane emissions monitoring location and frequency

Monitoring type	Location	Phase	Frequency	Number of samples
Surveillance	At each well site	Post HFS	Biennial sampling using 24-hour air canisters. BNR considers that the program will provide sufficient data to determine if any fugitive emissions from the well occur over the life of the well	One canister positioned around the well head

3.3.2 Sampling methodology

BNR plans to continue sampling for methane using 24-hour canisters, using the EP104 light hydrocarbon (calculated concentration) method, with the samples analysed by a NATA-accredited laboratory. Ambient air is admitted into the canister (under vacuum) using a calibrated passive air flow sampler, at a controlled rate over the set period of 24-hours, to obtain a time integrated, whole-air sample. Methane will then specifically be measured from the collected air in the laboratory. This method provides ambient concentrations of known pollutants present in air, thus enabling the assessment of the contribution to air pollution.

The location of methane emission monitoring will be based upon the location of the potential fugitive methane emissions arising post-activity from the Proposal.

3.3.3 Methane indicator

Given baseline samples within the Development Envelope determined that methane levels are below the detection limit (i.e. the laboratory LOR) of 3.3 mg/m^3, and given there is no environmental or health guideline value associated with methane levels, BNR has chosen to set the indicator as 3.3 mg/m^3 (Table 3-8).

Table 3-8: Methane analyte and indicator

Analyte	Indicator
Methane	3.3 mg/m^3 (laboratory LOR)

Table 3-9: VMP components – methane emissions

EPA factor/s and objective/s	To reduce net greenhouse gas emissions in order to minimise the risk of environmental harm associated with climate change			
Outcome/s	No short or long-term changes to air quality			
Key environmental values	Various			
Key impacts and risks	Contribution to GHG emissions.			
Indicators	**Response actions**	**Monitoring**	**Frequency**	**Reporting**
Trigger criteria A single exceedance of the indicator (Table 3-8)	**Trigger level actions** Within 60 days of exceedance: • identify the reason for the exceedance and determine direct correlation to project activities or natural variation, and review management measures with an adaptive management response • re-examine monitoring results (QA/QC) to validate data • conduct additional sampling within 6 months if required and until a trend back to baseline levels has been demonstrated and at least two consecutive results reflect no significant deviation from ambient (baseline) samples.	Table 3-7	Table 3-7	Routine reporting - annual reporting (AER) Exceedance of the threshold criteria and contingency actions that have been implemented due to the exceedance of threshold criteria – within 5 days.
Threshold criteria Consecutive exceedance of the indicator (Table 3-8)	**Threshold contingency actions** Within 30 days of exceedance initiate implementation of contingency measures including: • identify the reason for the exceedance and determine direct correlation to well site fugitive gas emissions, existing land use, or natural variation and review management measures with an adaptive management response • re-examine monitoring results (QA/QC) to validate data. • where the exceedance was not caused by the assets, resume standard monitoring frequency • where the threshold exceedance can be attributed to the assets: o implement adaptive management response that may then require: ▪ conduct additional sampling monitoring if required, increasing the monitoring frequency if required, to determine if emissions reduce and continue monitoring until a trend back to baseline levels has been demonstrated and at least two consecutive results reflect no significant deviation from ambient (baseline) samples. ▪ investigate assets to confirm if gas leakage is occurring and determine how leakage can be remediated on the asset ▪ remediate assets to prevent further gas leakage and fugitive emissions ▪ continue sampling/monitoring post remediation.	Table 3-7	Table 3-7	

3.4 NORM

The EPA objective for Human Health is:

- to protect human health from significant harm.

BNR does not believe that the Proposal activities will result in any impacts to human health. Subsequently, the NORM monitoring program has been developed to meet the following objective:

- no short or long-term adverse impacts to human health.

To understand if the Proposal and associated NORM emissions have had any short or long-term adverse impacts to human health, BNR plans to collect drill cuttings and PFW samples and analyse for the presence of NORM. Based upon NORM presence and levels, post activity sampling can be used to demonstrate upon completion of the activities that no short or long-term impacts to human health (limited to public health) have occurred. In completing this monitoring program, BNR can verify that the Proposal was undertaken in such a manner that protected human health from significant harm.

3.4.1 Sampling location and frequency

The proposed NORM monitoring program (including the location and frequency) is detailed in Table 3-10.

Table 3-10: NORM monitoring location and frequency

Monitoring type	Location	Phase	Frequency	Number of samples
Project activities	Mud sump	Following well drilling	Once only. BNR considers that one sample will provide sufficient data to characterise the composition of drill cuttings and confirm if NORM is present	One sample of drill cuttings within the mud sump at each well site
Project activities	Produced water retention pond	During well testing	Once only. BNR considers that one sample will provide sufficient data to characterise the composition of the formation water produced during HFS and confirm if NORM is present	One sample of PFW at each well site

3.4.2 Sampling methodology

Drill cutting samples will be manually collected using lab-supplied jars, and PFW samples collected using lab-supplied bottles, and analysed by a laboratory using NATA accredited methods.

3.4.3 NORM indicators

NORM indicators were based on the screening reference levels from the NCRP Report No. 129 Recommended screening limits for contaminated surface soil and review of factors relevant to site-specific studies (NCRP 1999). For each radionuclide, the screening reference level is the most conservative value from the range of land-use scenarios presented in the NCRP report. The screening levels are designed to restrict the total annual dose to any exposed person from a single contaminated site to no more than 250 µSv. The indicators for drill cutting NORM are provided in Table 3-11.

Table 3-11: NORM and indicator for drill cuttings

Analyte	Indicators (soil)
Uranium-238	620 Bq/kg (NCRP 1999)
Radium-226	3.7 Bq/kg (NCRP 1999)
Radium-228	In the absence of a specific guideline value for Radium-228 in soil, BNR have used the general radium guideline limit for solid NORM specified in the APPEA NORM guidelines (APPEA 2002):

	2,400 Bq/kg – should the specific radium activity exceed this value, the material should be regarded as NORM (APPEA 2002)
Lead-210	14 Bq/kg (NCRP 1999)
Thorium-232	2.3 Bq/kg (NCRP 1999)

Produced formation water NORM indicators were based on the Australian Drinking Water Guidelines (NHMRC and NRMMC 2011 (updated March 2021)), which provide a guideline value for annual exposure to radioactivity in drinking water. Produced formation water NORM indicators are presented in Table 3-12 below.

Table 3-12: NORM Indicators for PFW

Analyte	Indicators
Uranium isotopes (Uranium-238)	0.17 mg/L – Non-potable groundwater use (DOH 2014) The Australian water quality guidance level in drinking water is 0.5 Bq/L for gross alpha (α) and 0.5 Bq/L for gross beta (β). 0.5 Bq/L (NHMRC and NRMMC 2011)
Radium isotopes (Radium-226, Radium-228) Lead isotopes (Lead-210) Thorium isotopes (Thorium-232)	The Australian water quality guidance level in drinking water is 0.5 Bq/L for gross alpha (α) and 0.5 Bq/L for gross beta (β). 0.5 Bq/L (NHMRC and NRMMC 2011)

Table 3-13: VMP components – human health

EPA factor/s and objective/s	To protect human health from significant harm			
Outcome/s	No short or long-term adverse impacts to human health			
Key environmental values	Human Health			
Key impacts and risks	Build-up and release of radioactive substances or emissions that may impact on human health			
Indicators	**Response actions**	**Monitoring**	**Frequency**	**Reporting**
Trigger criteria Exceedance of NORM indicators (Table 3-11 and Table 3-12).	**Trigger level actions** • Within 60 days of exceedance: o re-examine monitoring results (QA/QC) to validate data o conduct additional sampling/monitoring if required to determine if NORM levels have changed o adapt the waste management strategy (including storage and disposal of wastes) for drill cuttings and PFW.	Table 3-10	Table 3-10	Annual reporting (AER) Exceedance reporting to EPA compliance branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.

4 Adaptive management and review of the VMP

4.1 Adaptive management

This VMP is intended to be dynamic and may be updated to reflect changes in management practices and the natural environment over time. Consequently, BNR will implement an adaptive management framework that allows BNR to adapt and implement improvements as a result of monitoring against trigger and threshold criteria detailed in this document. This will ensure that impacts and risks are reduced to as low as reasonably practicable as well as ensuring the environmental outcomes of this VMP are achieved.

The following approaches will apply:

- monitoring data will be systematically evaluated
- the effectiveness and relevance of trigger level and threshold contingency actions will be evaluated to determine if any changes to response actions are required.

Adaptive management practices that will be assessed as part of this approach may include:

- evaluation of each monitoring program, data and comparison to baseline data and reference sites on an annual basis to verify whether responses to Proposal activities are the same or similar to predictions
- evaluation of assumptions and uncertainties of the management and monitoring program
- re-evaluation of the risk assessment and revision of risk-based priorities as a result of monitoring outcomes
- review of data and information gathered over the review period that has increased understanding of site environment in the context of the regional ecosystem
- assessment of changes which are outside the control of the project and the response actions identified.

4.2 Monitoring plan review

In the event this plan is reviewed over the duration of the Proposal, BNR will treat it the same as other Part IV Environmental Management Plans. Specifically, a table summarising the changes following the template provided as Table 4-1 will be developed. This table will clearly indicate location and reason/s for changes. A tracked change version of the revised VMP will be provided for all minor, non-structural changes to the document.

Table 4-1: VMP review template

Complexity of changes	Minor revisions ☐	Moderate revisions ☐	Major revisions ☐	
Number of key environmental factors	One ☐	2-3 ☐	> 3 ☐	
Date revision submitted to EPA	DD/MM/YYYY			
Proponent's operational requirement timeframe for approval of revision	< One Month ☐	< Six Months ☐	> Six Months ☐	None ☐
Reason for Timeframe				

Item number	VMP section number	VMP page number	Summary of change	Reason for change
1.				
2.				
3.				

5 Stakeholder consultation

BNR consulted with stakeholders during the development of the EPA referral. Engagements that are deemed relevant are included in Table 5-1.

Table 5-1:Stakeholder engagement relevant to this VMP

Stakeholder	Method of engagement	Date of engagement	Summary of engagement
Department of Planning, Lands and Heritage (DPLH)	Email	18 Jun 2021	Received approval from DPLH for the temporary installation of an air quality monitoring station within an Aboriginal heritage site.
YAC	Email	14 Jun 2021	BNR requested approval to install air quality monitoring stations within the Noonkanbah Station as part of the Valhalla baseline air quality and GHG monitoring program. Approval granted.
Blina Station manager	Phone and email	14 Jun 2021	BNR provided locations of proposed air quality monitoring stations for the air quality and GHG monitoring program, prior to site installation that month.
EPA	Phone	04 Jun 2021	Discussed baseline monitoring requirements from the draft ESD and requested to remove the requirement to sample at each well site for a period of 24 months, and change to sampling representative control sites for a period of 24 months.
Blina Station manager	Phone and email	19 May 2021	BNR discussed the installation of air quality monitoring stations on Blina Station as part of the air quality and GHG baseline monitoring program. Station manager approved the installation of the equipment on Blina Station and suggested providing help to install these.
EPA	Email	15 Feb 2021	Discussed monitoring frameworks for dust, VOCs, and GHG monitoring. EPA enquired about the justification for the monitoring locations.
EPA	Meeting	08 Feb 2021	Discussed next steps with the EPA and to confirm the baseline monitoring frameworks. BNR action included sending the monitoring frameworks to the EPA with the aim of individually engaging with the relevant EPA branches to confirm each monitoring approach.
EPA	Phone	02 Feb 2021	Discussed baseline air quality monitoring. EPA waiting on suitable branch / personnel to review GHG baseline and confirmation of the objectives of air quality studies that have not progressed. Level of assessment likely released over the next week.

For a full summary of stakeholder engagement records refer to the BNR Environmental Review Document (BNR_HSE_MP_013).

Any additional consultation specifically regarding this VMP will be captured in subsequent revisions.

1 INTRODUCTION

Australasian Environmental Solutions Pty Ltd (AES) was contracted by Bennett Resources Pty Ltd (BNR) to undertake a baseline soil quality sampling within the Valhalla Gas Exploration and Appraisal Program's (the Proposal) Development Envelope, in accordance with the SQ1 Baseline Soil Quality Sampling Framework (no doc ID). The SQ1 framework involves the one-time sampling of sites, located in proximity to the proposed well site locations put forward in the Valhalla Proposal, to gather regional baseline soil quality data.

Baseline soil sampling was undertaken on 19 August 2021, with samples submitted to the laboratory on 25 August 2021 for analysis. Soil samples were collected from a total of six representative baseline sites located in the Exploration Permit EP 371, in the Canning Basin, Shire of Derby-West Kimberley, Western Australia (WA) (Figure 2-1). Specifically, these sites were selected for their location in different mapped soil landscape systems, and for their location in relation to the Proposal's Development Envelope and proximity to the proposed well sites.

1.1 Purpose and objectives

The purpose of this sampling report is to summarise the baseline soil sampling event, which will aid in the understanding of a local and regional soil quality assessment, as well as supporting the development of any future soil sampling and monitoring events that may occur throughout the duration of the Proposal.

The objectives of the report are to:

- Outline the sampling event
- Summarise the methodology
- Present any sampling event limitations
- Present the laboratory results
- Interpret and conclude on the baseline results.

1.2 Scope of work

The following activities were carried out as part of the scope of work for the baseline soil sampling event:

In six chosen sites:

- Measure out one 10m x 10m quadrat at each of the chosen soil locations
- Select five random locations within each quadrat, to yield one combined representative site sample
- Collect soil samples
- Submit samples to a NATA-accredited laboratory for the analysis of a comprehensive list of analytes and physical properties, and
- Prepare this report to inform on the methodology, field activities, limitations, results, interpretation and conclusions.

The results provided in this report are presented against the laboratory's limits of reporting or detection, which do not provide a comparison in terms of soil quality. A comparison against ecological and health screening levels has therefore been included to interpret the broad soil quality of the soil landscape systems sampled in the Development Envelope. Additional comparison against broader soil quality criteria is also within scope of this report.

2 SITE IDENTIFICATION

The indicative sites were firstly identified following a desktop assessment and scouting trip, undertaken in July 2021 to ascertain access to the chosen sites.

The sampling event was undertaken to assess baseline soil quality, therefore sites (Figure 2-1) were selected based upon mapped soil landscape systems within the Development Envelope, away from currently known or historically disturbed areas, such as near petroleum well sites, gravel pits and pastoral zones of influence (highly disturbed areas from cattle aggregation). The sites were selected as close as possible to certain proposed well site locations, in three different soil landscape systems (an additional system was sampled near the Mount Hardman creek given the proximity of this soil landscape system to some proposed well sites). Further detail on the sampling site justification is presented in the SQ1 Baseline Soil Quality Sampling Framework (no doc ID).

The soil sampling sites are presented in Table 4-1.

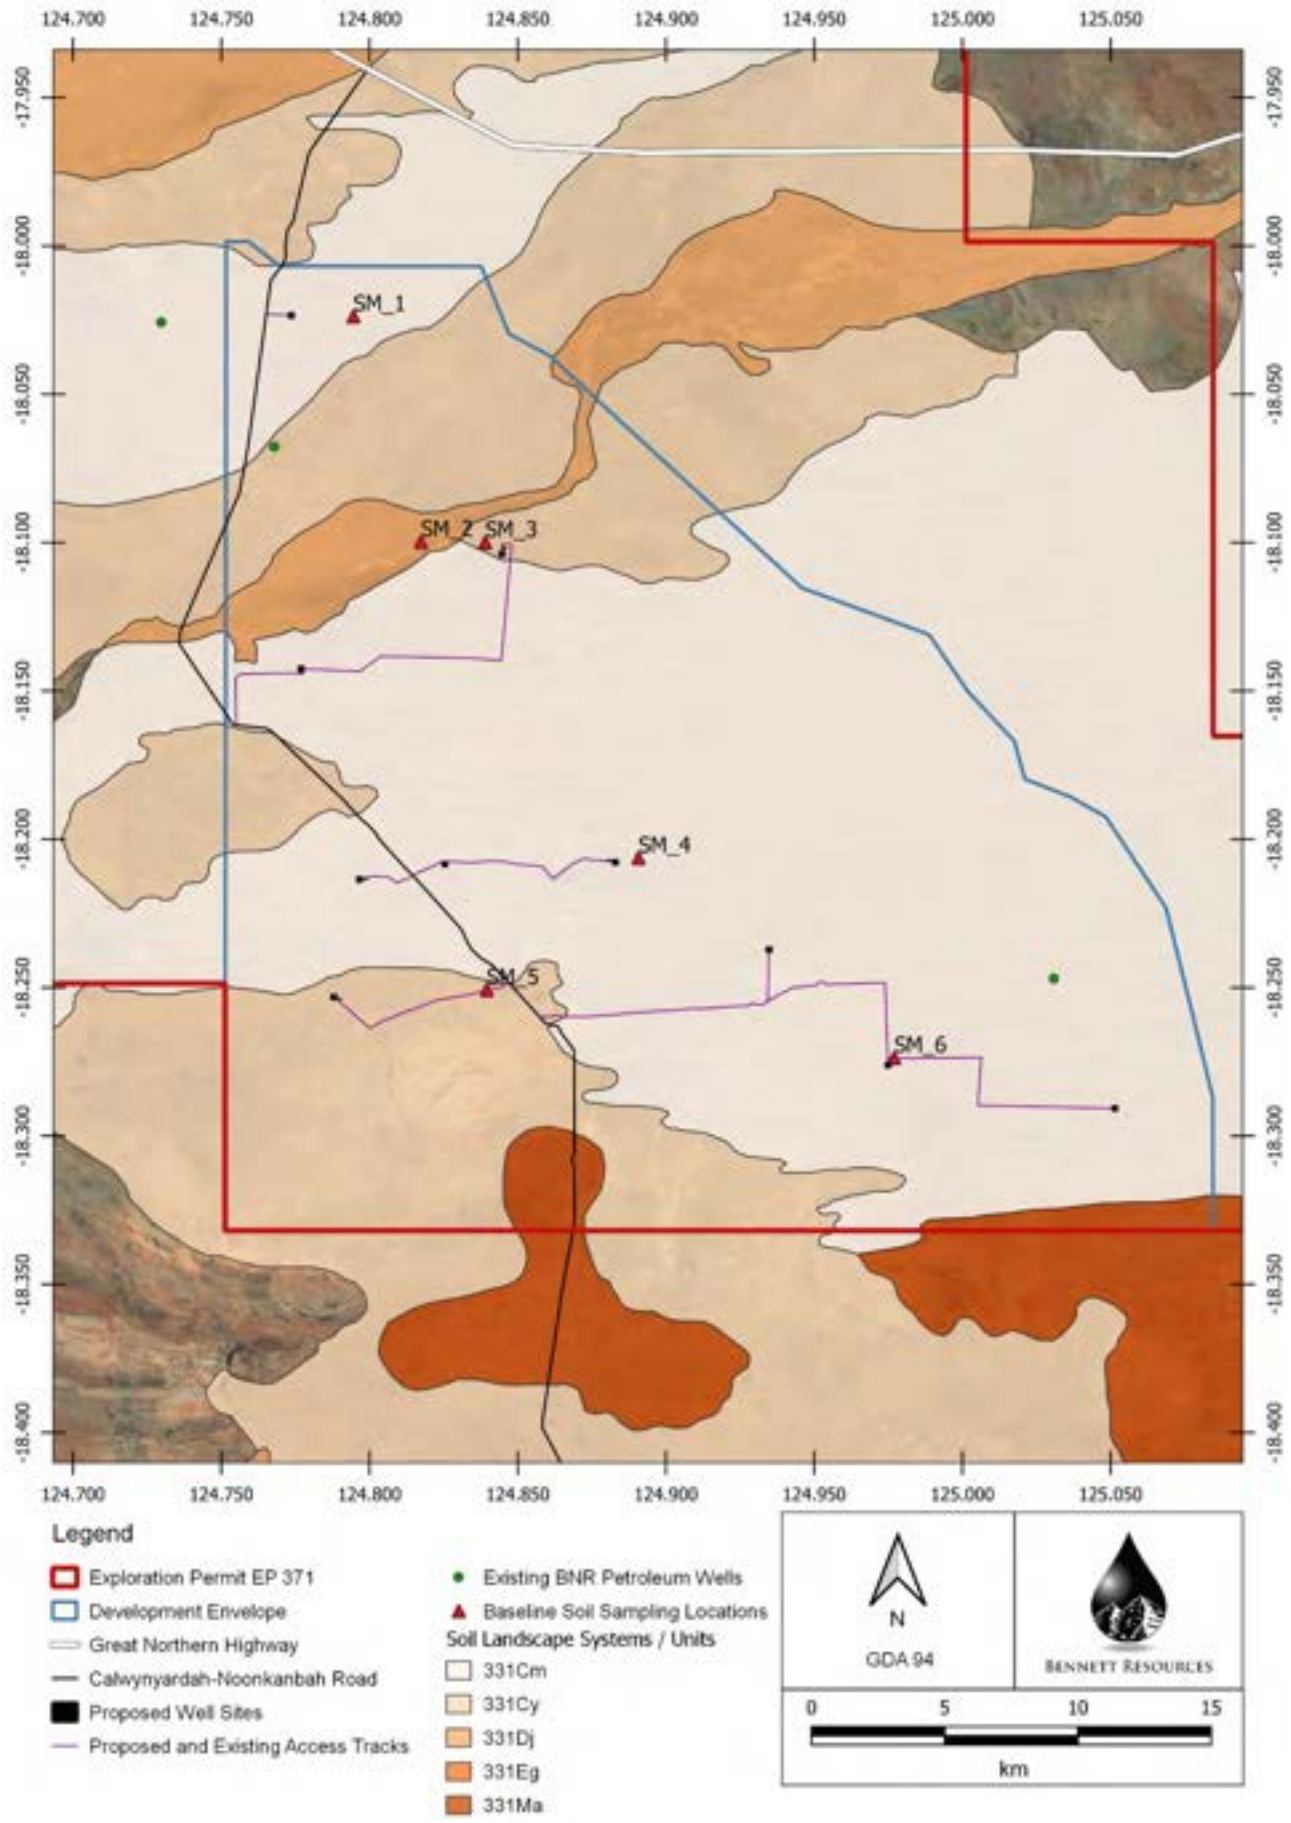

Figure 2-1: Baseline soil sampling sites

3 SUMMARY OF RECEIVING ENVIRONMENT

The Development Envelope is located within the 331 – North Fitzroy Plain Zone (soil landscape land quality zone), that covers an area of 17,925 km^2 (Tille 2006). The North Fitzroy Plain Zone is comprised of floodplains and sandplains (with alluvial plains and undulating plains) on Permian sedimentary rocks of the Canning Basin with self-mulching cracking clays, Red deep sands, Red sandy earths and Red / brown non-cracking clays. Rangeland Land Systems mapping, prepared by DPIRD, describe the biophysical characteristics of each region and separates these into land systems, which are defined as repeating patterns of topography, soil and vegetation. The Development Envelope covers four soil landscape systems (as seen in Figure 2-1), which are described as (Government of Western Australia 2021, Payne and Schoknecht 2011):

- 331Cm: Camelgooda System: Sandplains, swales and linear sand dunes supporting low pindan woodlands of acacias and low woodlands of bauhinia and bloodwood with curly spinifex and ribbon grass
- 331Cy: Calwynyardah System: Alluvial plains with scalded tracts downslope from lateritic remnants with yellowish loamy soils supporting patchy beefwood-bauhinia low woodlands with curly spinifex and ribbon grass; also minor hard spinifex grasslands
- 331Dj: Djada System: Active flood-plains with levees and levee back slopes supporting ghost gum open woodlands with frontage grasses, and cracking clay back plains supporting ribbon grass-blue grass and Mitchell grass grasslands
- 331Ma: Mamilu System: Plains and sandplains, deep red sands and yellowish loamy soils on lateritised sedimentary rocks supporting beefwood-bauhinia low woodlands and pindan acacia shrublands with curly spinifex and ribbon grass.

4 SAMPLING METHODOLOGY

Sampling was conducted as per the BNR Water and Soil Sampling Work Procedure (BNR_HSE_PR_006). The sampling methodology and analysis were reviewed using the following guideline: Department of Environmental Protection (WA): Development of Sampling and Analysis Programs (December 2001) (Department of Environmental Protection 2001).

Samples were collected by AES field staff on 19 August 2021 (Table 4-1).

Table 4-1: Valhalla baseline soil sampling sites

Site name	Soil landscape system	GPS L\location of sites (GDA 94)	Sampling date and time	Sampling depth and method
SM_1	331Cm	-18.023804 124.794597	19 Aug 2021 12:15 pm	0-40 cm mixture, soil shovel and tape measure (inappropriate soil for soil auger). 2 x 250 mL jars 1 x ~1kg soil bag

4.1 Sampling event limitations

As per Table 4-1, all sites were sampled. Sampling was undertaken in proximity to the indicative sites identified prior to the sampling event.

A simple soil auger was proposed to be used to sample soil to the depth of <40 cm. However, each soil site and thus landscape system was determined to be too dry, compact or difficult (e.g. loose sand or hard clay pan) to enable a reproducible, consistent and straightforward sample recovery with the auger.

As such, the auger was not used, and a small shovel was used. Sampling holes were dug to a depth of 40 cm.

The soil was too dry, compact or difficult (e.g. loose sand or hard clay pan) to obtain a suitable / consistent soil profile at each site with the equipment available. Soil depths were noted in some instances to be <5 cm prior to reaching the limit of hardpan.

All sites, with the exception of SM_2, were easily sampled given the type of soil encountered; predominantly sands and sandy soils. Samples from SM_2 were collected in the 331Dj: Djada Soil Landscape System, which consists of flood-plains with levees cracking clay back plains. This landscape system is present along the Mount Hardman Creek line and will not be encountered on the proposed well site locations for the Proposal. Samples were still collected to provide additional local background baseline data and to serve as comparison to the other soil landscape systems. Samples from SM_2 were difficult to collect with the shovel given the hard compact nature of the dry clay pan (<5 cm sample depth). Samples were required to be collected from a wider quadrat to include sandier soil near the dried creek (<20 cm sample depth), in order to submit sufficient soil matter for lab analysis.

5 CRITERIA, INVESTIGATION AND SCREENING LEVELS

Investigation and screening levels have been applied to constituents of potential concern (CoPC) to evaluate potential risks to ecosystems and human health from CoPC. Exceedance of the investigation and screening levels as presented within the adopted criteria does not necessarily infer that the substance presents a hazard or risk to human health, the environment or environmental values but that further investigation, assessment and / or risk mitigation measures are required.

5.1 References for investigation and screening levels

The following documents and guidelines addressing soil ecological and health criteria and screening levels were reviewed and applied for the interpretation of the soil sample results:

- Department of Environment and Conservation (DEC) (2010). Assessment levels for Soil, Sediment and Water. Contaminated Sites Management Series, Version 4 Revision 1, February 2010. Government of Western Australia (DEC 2010)
- Department of Environment Regulation (DER) (2014). Assessment and management of contaminated sites – Contaminated sites guidelines. December 2014. Government of Western Australia (DER 2014)
- National Environment Protection Council (NEPC) (1999). Assessment of Site Contamination) Measure (NEPM), Schedule B (1) – Guideline on the Investigation Levels for Soil and Groundwater (NEPC 1999)
- Dutch B (Indicative value for further investigation) from Moen, J.E.T., Cornet, J.P and Evers, C.W.A (1986). Soil protection and remedial actions: criteria for decision-making and standardisation of requirements, in Assink, J.W and van den Brink, W.M (1986). Contaminated Soils, First International TNO Conference on Contaminated Soil, 11-15 November 1985 (Assink and van den Brink 1986)
- ANZECC B (Environmental Investigation Levels) from ANZECC & NHMRC (1992) Australian and New Zealand Guidelines for the Assessment and Management of Contaminated Sites (ANZECC and NHMRC 1992)

- US EPA regional screening levels (RSLs) from US EPA (2009). Regional Screening Levels, available from https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables (US EPA 2021)
- Department of Health's (DOH) letter to DEC, dated 21 April 2009 (reference 04- 06372). Contaminated Sites Management Series of Guidelines – Assessment Levels for Soils, Sediment and Water (Version 4.0) (DoH 2009).

The following definitions (NEPC 1999) have been provided to support the basis of comparison with accepted levels:

- "Ecological investigation levels have been developed for selected metals and organic substances and are applicable for assessing risk to terrestrial ecosystems. [These] depend on specific soil physicochemical properties and land use scenarios and generally apply to the top 2 m of soil"
- "Ecological screening levels have been developed for selected petroleum hydrocarbon compounds and total petroleum hydrocarbon (TPH) fractions and are applicable for assessing risk to terrestrial ecosystems. [These] broadly apply to coarse- and fine-grained soils and various land uses. They are generally applicable to the top 2 m of soil"
- "Health investigation levels have been developed for a broad range of metals and organic substances. [These] are applicable for assessing human health risk via all relevant pathways of exposure. [These] are generic to all soil types and apply generally to a depth of 3 m below the surface for residential use"
- "Health screening levels have been developed for selected petroleum compounds and fractions and are applicable to assessing human health risk via the inhalation and direct contact pathways. [These] depend on specific soil physicochemical properties, land use scenarios, and the characteristics of building structures. They apply to different soil types, and depths below surface to >4 m".

5.2 References for soil criteria and ratings

5.2.1 pH

As with many measurements on soils and sediments, pH values will vary depending on the procedure / laboratory analytical method used. pH ratings for pH extracted using deionised water ($pH_H{}^2{}_O$) at a sample solution ration of 1:5 are presented below in Table 5-1.

Table 5-1: Soil $pH_H{}^2{}_O$ ratings (Rayment and Lyons 2011) adapted from (Bruce and Rayment 2004) and (USDA-NRCS 2004)

$pH_H{}^2{}_O$ range	Rating (pH units)
1.8 – 3.4	Ultra acidic
3.5 – 4.4	Extremely acidic
4.5 – 5.0	Very strongly acidic
5.1 – 5.5	Strongly acidic
5.6 – 6.0	Moderately acidic
6.1 – 6.5	Slightly acidic
6.6 – 7.3	Circum-neutral
7.4 – 7.8	Slightly alkaline
7.9 – 8.4	Moderately alkaline
8.5 – 9.0	Strongly alkaline
9.1 – 10	Very strongly alkaline
>10	Ultra alkaline

5.2.2 Electrical conductivity

Electrical conductivity (EC) is typically measured in a 1:5 soil:water extract (EC (1:5)). Soil type must be considered when assessing soil salinity based on EC (1:5). Soil salinity ratings (based on standard CSIRO categories (Rayment and Lyons 2011) for sand, loam and clay types are presented in Table 5-2.

Table 5-2: Soil salinity rating for EC (1:5)

Salinity rating	Salinity rating based on EC (1:5) (µS/cm)

	Sand	Sandy loam	Loam	Clay loam	Light / medium clay	Heavy clay
Non-saline / very low	<130	<170	<200	<220	<250	<330
Slightly saline	130 – 260	170 – 330	200 – 400	220 – 440	250 – 500	330 – 670
Moderately saline	260 – 520	330 – 670	400 – 800	440 – 890	500 – 1,000	670 – 1,330
Very saline	520 – 1,060	670 – 1,330	800 – 1,600	890 – 1,780	1,000 – 2,000	1,330 – 2,670
Extremely saline	>1,060	>1,330	>1,600	>1,780	>2,000	>2,670

5.2.3 Organic carbon and organic matter

The general ranking of soil organic matter levels (Emerson 1991, Hazelton and Murphy 2016, Charman and Roper 2007), presented in Table 5-3 below, has been based on soils that are light-textured (sand loams, loams) and weakly structured. These soils broadly coincide with hard-setting soils.

Table 5-3: Relationship of soil organic matter to soil physical properties

Level of organic matter (%w/w)	Level of organic carbon (%w/w)	Rating	Interpretation
<0.70	<0.40	Extremely low	Subsoils or severely eroded, degraded surface soils
0.70 – 1.00	0.40 – 0.60	Very low	Very poor structural condition, very low structural stability
1.00 – 1.70	0.60 – 1.00	Low	Poor to moderate structural condition, low to moderate structural stability
1.70 – 3.00	1.00 – 1.80	Moderate	Average structural condition, average structural stability
3.00 – 5.15	1.80 – 3.00	High	Good structural condition, high structural stability
>5.15	>3.00	Very high	Good structural condition, high structural stability and soils probably water repellent

5.2.4 Major nutrients

In literature, major nutrients in WA soils are often analysed using the Mehlich 3 extraction multi-element soil test methodology to assess soils for potential nutrient deficiencies, toxicity or imbalance that may affect revegetation outcomes. However, the methodology employed by the NATA-accredited laboratory (acid extractable metals, AN-045) during this baseline soil analysis differs significantly from the Melhich 3 extraction methodology, thus comparison against other WA soil nutrient values was deemed not possible.

5.2.5 Laboratory analysed parameters

The analysis undertaken by the NATA-accredited laboratory SGS Perth is presented in the laboratory certificate of analysis in Appendix A. The results are also presented in Table 7-1 of Section 7.1, with comparison against ecological and health investigation and screening levels.

6 RESULTS AND DISCUSSION

6.1 Field observations

The weather condition on the day of sampling was sunny and hot (24-35° Celsius), with no cloud cover and a light predominantly south easterly wind. As the sampling was undertaken during the dry season of the Kimberley, the soil appeared very dry and in certain areas extremely hard and compact (dry clay pan).

The quadrat at each sampling site was set up away from the vehicle, with the engine switched off during sampling to avoid any potential contamination from exhaust fumes.

In-field description of the samples are presented in Table 6-1.

Table 6-1: Site descriptions

Site name	Soil landscape system (refer to Section 3)	Brief field description of the sites
SM_1	331Cm	On the top of a dune. Evidence of recent burning (timeframe unknown).
SM_2	331Dj	In dry clay pan and along creek line.
SM_3	331Cy	Evidence of cattle access. Evidence of recent burning (timeframe unknown).

SM_4	331Cm	Within grasses.
SM_5	331Cy	Within spinifex bushes. Evidence of cattle presence within the quadrat.

SM_6	331Cm	Within tall grasses.

7 RESULTS AND INTERPRETATION

Soil quality has been compared against the ecological and health levels discussed in Section 5. An interpretation of the soil chemistry is further presented in Section 7.1, following a comparison against broad soil quality ratings from literature.

Physical analysis including particle size distribution (PSD) of the soil samples is summarised in Section 7.2.

7.1 Chemical analysis

Results show that, for all soil samples, all analytes were below any of the ecological and health investigation and screening levels (Table 7-1). Overall, samples from the same soil landscape systems (SM_1, SM_4, SM_6 in 331Cm red deep sands; and SM_3, SM_5 in 331Cy yellow sandy earth) presented some differences however were within similar ranges of results. It can be inferred that the soil quality resulting from these samples are representative of the soil landscape systems present throughout the Development Envelope.

7.1.1 pH

Soil pH provides a measure of the soil acidity or alkalinity. Based on Table 7-1, overall pH values for the samples ranged between circum-neutral (pH 6.6 – 7.3) for red deep sands (331Cm) and yellow sandy earths (331Cy), and slightly alkaline (pH 7.4 – 7.8) for self-mulching cracking clays (331Dj).

7.1.2 Electrical conductivity

EC measures soluble salts in soils (soil salinity), which results from and depends on natural processes of landscape evolution, hydrological processes and rainfall (Hunt and Gilkes 1992). Based on the standard CSIRO categories (Rayment and Lyons 2011) (Table 5-2), soils with EC values generally below 130 µS/cm are considered non-saline.

Soils sampled within the Development Envelope recorded low EC values that ranged from 4 µS/cm to 29 µS/cm. All samples were therefore classed as non-saline. Deep red sands (331Cm) were found to least saline than yellow sandy earths (331Cy), with the self-mulching cracking clays having the highest non-saline rating of 29 µS/cm.

7.1.3 Organic carbon and organic matter

The organic matter content of soil, directly derived from plants and animals, is an important factor influencing many physical, chemical and biological soil characteristics. The presence of organic matter may increase water retention capacity, buffer pH and improved general soil structure. It is typically determined as a measure of the Total Organic Carbon (TOC) percentage.

By international standards, WA soils contain low concentrations of organic carbon. Organic carbon content is dependent upon soil texture and climate, with sandy soils and soils from tropical northern WA and arid central WA containing lower carbon contents (typically <1 %w/w in topsoil) compared to clay and loam soils from the temperate southwest regions of WA (MBS Environmental 2016). It is expected that organic carbon decreases with depth. Samples taken as part of this baseline soil sampling event combined all horizons (soil layers) up to <40 cm depth given specific soil profile analysis was out of scope. Thus, the distinction of organic carbon decrease with depth was not determined for this study.

In accordance with Table 5-3, all soils (mixtures of surface and subsoil) sampled within the Development Envelope recorded low levels of organic matter (OM) and TOC, with TOC ranging between 0.38 %w/w – 0.62 %w/w, and OM ranging between 0.22 %w/w – 0.36 %w/w. In general, deep red sands recorded less OM and TOC.

Interpretation of the values recorded for the sampling event and having regard for the relationship between OM and TOC suggest that the samples correspond to ‘low subsoils or severely eroded, degraded surface soils’. However, these interpretations are for reference only. Given that the baseline samples were selected within the wider untouched, natural environment, these are representative of the soil landscape systems. It is expected that other sands and earths in the region in the same vegetation systems will also record very low levels of OM and TOC.

7.1.4 Metals and major nutrients

As stated in Section 5.2.4, comparison of the soil results against other WA sites and their major nutrient values could not be undertaken due to the differences in lab methodologies at the time of sample analysis.

As anticipated, discrepancies were noted between the types of soil landscape systems. Metals (particularly chromium, manganese, iron) and minerals (calcium, magnesium, potassium) were generally lower in samples from the 331Cm red deep sands than in the 331Cy yellow sandy earths. Metals and silica in the comparative sample from the 331Dj self-mulching cracking clay (creekline soil sample) were in most cases significantly higher. The discrepancies in geochemistry are characteristic of these different types of soils.

7.1.5 Hydrocarbons

BTEX and hydrocarbon results were all below the laboratory’s limit of reporting.

7.2 Physical analysis

Soil particles will vary from fine clay to rocks, conventionally classed between coarse fragments (>2 mm) and fine earth (<2 mm). Sand and clay particles dominate in most WA soils and particularly within the Development Envelope.

Limited PSD data was available for these samples as particle sizing of soils <75 µm by hydrometer was not conducted where insufficient sample passed the 75 µm fraction. Only the sample SM_2 corresponding to self-mulching cracking clay soil could be sized through hydrometry <75 µm, confirming that the other samples comprise larger particles characteristic of sandy soils.

All laboratory quality control testing (including spikes and duplicates) were within acceptable ranges (Appendix A).

SGS

QC SUMMARY

PE154290 R0

MB blank results are compared to the Limit of Reporting
LCS and MS spike recoveries are measured as the percentage of analyte recovered from the sample compared the the amount of analyte spiked into the sample.
DUP and MSD relative percent differences are measured against their original counterpart samples according to the formula : *the absolute difference of the two results divided by the average of the two results as a percentage*. Where the DUP RPD is 'NA' , the results are less than the LOR and thus the RPD is not applicable.

Alkalinity in Soil Method: ME-(AU)-[ENV]AN002/AN135

SGS

METHOD SUMMARY

PE154290 R0

METHOD	METHODOLOGY SUMMARY
AN002	The test is carried out by drying (at either 40°C or 105°C) a known mass of sample in a weighed evaporating basin. After fully dry the sample is re-weighed. Samples such as sludge and sediment having high percentages of moisture will take some time in a drying oven for complete removal of water.
AN002/AN135	Alkalinity (and forms of) by Titration: The sample is extracted 1to 5 in deionised water and the extract titrated with standard acid to pH 8.3 (P titre) and pH 4.5 (T titre) and permanent and/or total alkalinity calculated. The results are expressed as equivalents of calcium carbonate or recalculated as bicarbonate, carbonate and hydroxide. Reference APHA 2320. Internal Reference AN135
AN002/AN270	A 1:5 sample to DI water extract is analysed for reactive silica with results reported back to the dried sample basis. Reactive forms of silicon in acid solution below pH 2 react with ammonium molybdate ions to form a yellow silicomolybdate which is then reduced with ascorbic acid to produce a blue silicomolybdate complex. Oxalic acid is added to destroy any molybdophosphoric acid. Colourimetric determination by Aquakem Discrete Analyser.
AN005	The particle size distribution of a soil is determined by wet sieving, using a maximum of 900 mL of deionised water to sieve all fractions down to 75 µm. Referenced to AS1289.3.6.1 and AS1141.11.
AN005	Following wet sieving of the sample,(particles smaller than 75 µm) a dispersing solution is added and a hydrometer is used to measure sedimentation. Soil density is determined and the percentage of each size fraction calculated. Referenced to AS1289.3.6.3.
AN040	A portion of sample is digested with Nitric acid to decompose organic matter and Hydrochloric acid to complete the digestion of metals and then filtered for analysis by ASS or ICP as per USEPA Method 200.8.
AN045	A portion of sample is digested with Nitric acid and Hydrogen Peroxide over time and then with Hydrochloric acid through several heating and cooling cycles. It provides a strong oxidising medium for bringing metal analytes into solution according to USEPA3050, after filtration the solution is presented for analysis on AAS or ICP.
AN045/AN320	Solid sample is digested with HNO3 and H2O2 and completed with addition of HCl based on USEPA Method 3050. Digest is then analysed by ICP-OES. Photomultipliers or CCDs are used to measure the light intensity at specific wavelengths. This intensity is directly proportional to concentration. Corrections are required to compensate for spectral overlap between elements. Reference USEPA3050, USEPA6010C and APHA 3120 B.
AN045/IMS84V	Determination of elements at trace level in soil digest by ICP-MS technique, Digest analysis performed by SGS Minerals division, method IMS84V.
AN075	This method uses an alkaline digestion to solubilise both water-soluble and water-insoluble forms of hexavalent chromium in solids. The solution is then pH adjusted and the hexavalent chromium concentration in solution determined colourimetrically.
AN101	pH in Soil Sludge Sediment and Water: pH is measured electrometrically using a combination electrode and is calibrated against 3 buffers purchased commercially. For soils, sediments and sludges, an extract with water (or 0.01M CaCl2) is made at a ratio of 1:5 and the pH determined and reported on the extract. Reference APHA 4500-H+.

METHOD	METHODOLOGY SUMMARY
AN106	Conductivity and TDS by Calculation: Conductivity is measured by meter with temperature compensation and is calibrated against a standard solution of potassium chloride. Conductivity is generally reported as µmhos/cm or µS/cm @ 25°C. For soils, an extract of as received sample with water is made at a ratio of 1:5 and the EC determined and reported on the extract, or calculated back to the as-received sample. Salinity can be estimated from conductivity using a conversion factor, which for natural waters, is in the range 0.55 to 0.75. Reference APHA 2510 B.
AN141	Determination of Fluoride by ISE: A fluoride ion selective electrode and reference electrode combination , in the presence of a pH/complexation buffer, is used to determine the fluoride concentration on the soil water extract. The electrode millivolt response is measured logarithmically against fluoride concentration. Reference APHA F- C.
AN258	Nitrate and Nitrite by FIA:: In an acidic medium, nitrate is reduced quantitatively to nitrite by cadmium metal. This nitrite plus any original nitrite is determined as an intense red-pink azo dye at 540 nm following diazotisation with sulphanilamide and subsequent coupling with N-(1-naphthyl) ethylenediamine dihydrochloride. Without the cadmium reduction only the original nitrite is determined. Reference APHA 4500-NO3- F.
AN273	The sample is digested in Dichromate / Sulfuric Acid to oxidise the organic carbon. The determination is completed colourimetrically by Aquakem Discrete Analyser at 600 nm. Based on Rayment & Higginson 6B1.
AN274	Chloride by Aquakem DA following 1:5 or 1:2 DI water extraction: Chloride reacts with mercuric thiocyanate forming a mercuric chloride complex. In the presence of ferric iron, highly coloured ferric thiocyanate is formed which is proportional to the chloride concentration. Results reported on dry sample basis. Reference APHA 4500Cl-
AN275	sulfate by Aquakem DA following 1:5 DI water extraction: sulfate is precipitated in an acidic medium with barium chloride. The resulting turbidity is measured photometrically at 405nm and compared with standard calibration solutions to determine the sulfate concentration in the sample. Reference APHA 4500-SO42-. Internal reference AN275.
AN278	Reactive Phosphorus in extract by DA: Orthophosphate reacts with ammonium molybdate (Mo VI) and potassium antimonyl tartrate (Sb III) in acid medium to form an antimony-phosphomolybdate complex. This complex is subsequently reduced with ascorbic acid to form a blue colour and the absorbance is read at 880 nm. The sensitivity of the automated method is 10-20 times that of the macro method. Reference APHA 4500-P G
AN283	Hexavalent Chromium via Aquakem DA: Soluble hexavalent chromium forms a red/violet colour with diphenylcarbazide in acidic solution. This procedure is very sensitive and nearly specific for Cr6+. If total chromium is also measured the trivalent form of chromium Cr3+ can be calculated from the difference (Total Cr - Cr6+). Reference APHA3500Cr-B.
AN312	Mercury by Cold Vapour AAS in Soils: After digestion with nitric acid, hydrogen peroxide and hydrochloric acid, mercury ions are reduced by stannous chloride reagent in acidic solution to elemental mercury. This mercury vapour is purged by nitrogen into a cold cell in an atomic absorption spectrometer or mercury analyser. Quantification is made by comparing absorbances to those of the calibration standards. Reference APHA 3112/3500
AN320	Metals by ICP-OES: Samples are preserved with 10% nitric acid for a wide range of metals and some non-metals. This solution is measured by Inductively Coupled Plasma. Solutions are aspirated into an argon plasma at 8000-10000K and emit characteristic energy or light as a result of electron transitions through unique energy levels. The emitted light is focused onto a diffraction grating where it is separated into components .

METHOD	METHODOLOGY SUMMARY
AN403	Total Recoverable Hydrocarbons: Determination of Hydrocarbons by gas chromatography after a solvent extraction. Detection is by flame ionisation detector (FID) that produces an electronic signal in proportion to the combustible matter passing through it. Total Recoverable Hydrocarbons (TRH) are routinely reported as four alkane groupings based on the carbon chain length of the compounds: C6-C9, C10-C14, C15-C28 and C29-C36 and in recognition of the NEPM 1999 (2013), >C10-C16 (F2), >C16-C34 (F3) and >C34-C40 (F4). F2 is reported directly and also corrected by subtracting Naphthalene (from VOC method AN433) where available.
AN403	Additionally, the volatile C6-C9 fraction may be determined by a purge and trap technique and GC/MS because of the potential for volatiles loss. Total Recoverable Hydrocarbons - Silica (TRH-Si) follows the same method of analysis after silica gel cleanup of the solvent extract. Aliphatic/Aromatic Speciation follows the same method of analysis after fractionation of the solvent extract over silica with differential polarity of the eluent solvents .
AN403	The GC/FID method is not well suited to the analysis of refined high boiling point materials (ie lubricating oils or greases) but is particularly suited for measuring diesel, kerosene and petrol if care to control volatility is taken. This method will detect naturally occurring hydrocarbons, lipids, animal fats, phenols and PAHs if they are present at sufficient levels, dependent on the use of specific cleanup/fractionation techniques. Reference USEPA 3510B, 8015B.
AN420	(SVOCs) including OC, OP, PCB, Herbicides, PAH, Phthalates and Speciated Phenols (etc) in soils, sediments and waters are determined by GCMS/ECD technique following appropriate solvent extraction process (Based on USEPA 3500C and 8270D).
AN420	Carcinogenic PAHs may be expressed as Benzo(a)pyrene equivalents by applying the BaP toxicity equivalence factor (NEPM 1999, June 2013, B7). These can be reported as the individual PAHs and as a sum of carcinogenic PAHs. The sum is reported three ways, the first assuming all <LOR results are zero, the second assuming all < LOR results are half the LOR and the third assuming all <LOR results are the LOR.
AN433	VOCs and C6-C9 Hydrocarbons by GC-MS P&T: VOC`s are volatile organic compounds. The sample is presented to a gas chromatograph via a purge and trap (P&T) concentrator and autosampler and is detected with a Mass Spectrometer (MSD). Solid samples are initially extracted with methanol whilst liquid samples are processed directly. References: USEPA 5030B, 8020A, 8260.

SGS

FOOTNOTES

FOOTNOTES

IS	Insufficient sample for analysis.	LOR	Limit of Reporting
LNR	Sample listed, but not received.	↑↓	Raised or Lowered Limit of Reporting
*	NATA accreditation does not cover the performance of this service.	QFH	QC result is above the upper tolerance
**	Indicative data, theoretical holding time exceeded.	QFL	QC result is below the lower tolerance
***	Indicates that both * and ** apply.	-	The sample was not analysed for this analyte
		NVL	Not Validated

Unless it is reported that sampling has been performed by SGS, the samples have been analysed as received.
Solid samples expressed on a dry weight basis.

Where "Total" analyte groups are reported (for example, Total PAHs, Total OC Pesticides) the total will be calculated as the sum of the individual analytes, with those analytes that are reported as <LOR being assumed to be zero. The summed (Total) limit of reporting is calculated by summing the individual analyte LORs and dividing by two. For example, where 16 individual analytes are being summed and each has an LOR of 0.1 mg/kg, the "Totals" LOR will be 1.6 / 2 (0.8 mg/kg). Where only 2 analytes are being summed, the "Total" LOR will be the sum of those two LORs.

Some totals may not appear to add up because the total is rounded after adding up the raw values.

If reported, measurement uncertainty follow the ± sign after the analytical result and is expressed as the expanded uncertainty calculated using a coverage factor of 2, providing a level of confidence of approximately 95%, unless stated otherwise in the comments section of this report.

Results reported for samples tested under test methods with codes starting with ARS-SOP, radionuclide or gross radioactivity concentrations are expressed in becquerel (Bq) per unit of mass or volume or per wipe as stated on the report. Becquerel is the SI unit for activity and equals one nuclear transformation per second.
Note that in terms of units of radioactivity:

a. 1 Bq is equivalent to 27 pCi
b. 37 MBq is equivalent to 1 mCi

For results reported for samples tested under test methods with codes starting with ARS-SOP, less than (<) values indicate the detection limit for each radionuclide or parameter for the measurement system used. The respective detection limits have been calculated in accordance with ISO 11929.

The QC and MU criteria are subject to internal review according to the SGS QAQC plan and may be provided on request or alternatively can be found here: www.sgs.com.au/en-gb/environment-health-and-safety.

Appendix G. 2023 Soil Samping and Profile (Gemec 2023)

20 October 2023

Bennett Resources Pty Ltd
Level 14, 225 St Georges Terrace
Perth WA 6000

Re: Targeted Soil & Groundwater Works – Valhalla Gas Exploration & Appraisal Program

Please see below a summary of targeted soil and groundwater works undertaken by Gemec for the Valhalla Gas Exploration and Appraisal Program (the Proposal) on 25-26 July 2023.

Gemec was engaged by Bennett Resources Pty Ltd (BNR) to undertake down-hole inspection of four groundwater monitoring wells at the Agard 1 and Valhalla North 1 wellsites, and the excavation and sampling of one soil borehole at the Proposed Well 3 location. The sites are located within the petroleum Exploration Permit EP 371, situated in the in the locality of Mount Hardman, Shire of Derby-West Kimberley, Western Australia.

The Proposal is to complete an unconventional exploration and appraisal drilling and Hydraulic Fracture Stimulation (HFS) program within EP 371 in the Canning Basin. A total of 20 exploration wells are proposed to be constructed at 10 well sites (Figure 1) within the Development Envelope. At the time of the works the Proposal is being assessed by the EPA (Assessment 2281).

1. Purpose

The purpose of the works was to determine whether the construction and condition of existing groundwater monitoring wells is appropriate for baseline groundwater assessment purposes, and to establish a baseline soil data set.

2. Scope of Works

The following activities were carried out as part of the scope of work:

- mobilised personnel and equipment to site;
- completed an occupational health and safety plan for the proposed works;
- inspected four groundwater monitoring wells via down-hole camera;
- excavated one soil borehole to a total depth of 2.0 metres below ground surface;
- undertook sufficient quality assurance (QA) and quality control (QC) procedures to ensure the soil assessment was representative;
- collected two representative primary soil samples and two QC samples from the soil borehole, chilled and transported the samples under chain of custody (CoC) protocols to National Association of Testing Authorities (NATA) accredited laboratories for analysis; and
- prepared a report detailing the field activities, analytical results, conclusions and any recommendations.

Field work was undertaken by an experienced Contaminated Land Consultant from Gemec's Perth office in accordance with the various standards and guidelines referenced in s. 5 (References) and Gemec's Protocols.

3. Soil Assessment

The soil borehole SB1 was excavated from the Proposed Well 3 wellsite shown on the attached Figure 1. The location was chosen as its surface geology and soil landscape are each one of the two most widespread throughout the Proposal area.

- Surface geology: 'Dunes' – sandplain with dunes and swales, may include numerous interdune claypans, may be locally gypsiferous (Geoscience Australia, 2023).
- Soil landscape: 'Camelgooda System' – sandplains, swales and linear sand dunes supporting low pindan woodlands of acacias and low woodlands of bauhinia and bloodwood with curly spinifex and ribbon grass (DPIRD, 2023).
- Land type: sandplains and dunes, pindan woodlands and spinifex/tussock grasslands (DPIRD, 2023).

3.1 Methodology

SB1 was excavated using a 75 mm Ø stainless-steel hand auger. A fresh pair of disposable nitrile gloves was worn for each sample collection and the hand auger was decontaminated prior to and post sampling by washing with a laboratory grade phosphate free detergent solution (Quantumclean®) and rinsing with tap water. The soil samples were collected in laboratory supplied sample containers, chilled following collection and sent under CoC documentation to NATA accredited laboratories for testing. The sample containers were marked with an identifying number, depth and date.

The two sample depths aimed to capture variation through the upper soil profile, at depths that are most likely to be exposed to Chemicals of Potential Concern (CoPC) originating from wellsite activities. The samples were collected from the soil surface at 0-0.3 metres below ground surface (m bgs) and at 1.7-2.0 m bgs.

3.2 Sample Analytical Suites

The CoPC selected for assessment are associated with future potential contaminant sources at each wellsite. Additional physical and chemical analyses were used to further define the nature of the soil and to allow for the calculation of site-specific screening levels.

Both primary soil samples were submitted for analysis of the following:

- Petroleum hydrocarbon compounds including benzene, toluene, ethylbenzene, xylenes and naphthalene (BTEXN) and total recoverable hydrocarbon (TRH) fractions in the C6-C40 carbon chain range;
- metals, metalloids and non-metals including aluminium, arsenic, barium, boron, cadmium, chromium, hexavalent chromium, copper, iron, lead, manganese, mercury, nickel, selenium, strontium, thorium, tin, uranium and zinc;
- nutrients including total nitrogen, total Kjeldahl nitrogen (TKN), ammonia, nitrate, nitrite, total phosphorous and phosphate;
- miscellaneous inorganics including sulfur, fluoride and total cyanide; and
- soil characteristics including pH, electrical conductivity (EC), cation exchange capacity (CEC), clay content, total organic carbon (TOC) and organic matter (TOM).

The analytical procedures used by the laboratories undertake determinations in accordance with the following internationally recognised procedures – NEPM, US EPA, APHA and AS.

3.3 Soil Screening Levels

Soil sample concentrations were compared against site screening levels for the protection of ecological and human health as per the 2021 Department of Water and Environmental Regulation (DWER) *Assessment and management of contaminated sites* guideline, which references screening levels detailed in the *National Environment Protection (Assessment of Site Contamination) Measure* (ASC NEPM – NEPC, 2013).

The selected soil screening levels are presented in the attached Tables and were based on the use of the site and surrounds for broad scale agriculture. The screening level guidelines are presented in the References section (s. 5).

3.4 Quality Control

Quality control samples included blind field replicates (Dup and Split), a Rinsate and a Trip Blank sample. The results of each of these are presented in the attached Tables and Appendix A. The absence of analytes detected in the Rinsate and Trip Blank suggest that no cross contamination occurred via equipment, storage or transport. Most relative percentage difference values for the Dup and Split samples were below 50%, and those above 50% weren't considered significant as the value was within 10x the laboratory limit of reporting (LoR). This suggests an adequate level of repeatability of the sampling procedure, and homogeneity of the samples collected.

Laboratory outliers were reported for holding times (pH, EC, phosphate and nitrite) and matrix spike recovery (TKN, sulfur, aluminium, iron, manganese, zinc). The holding times will be taken into consideration for future assessment, whereas the matrix spike recovery wasn't considered applicable due to the high analyte background in the sample and the laboratory control sample being within acceptance criteria. By signing the laboratory reports the laboratories acknowledge that the results satisfy their NATA accreditation.

3.5 Results

Results are discussed in context of the following attachments:

- Soil analytical results: Tables 1-3.
- Laboratory analytical reports: Appendix A.
- Soil sample location: Figure 1.
- Site photographs: Appendix C

The soil was observed as brown, fine to medium grain silty clayey sand at the surface, and with depth it tended toward brownish red, a higher clay content and damp. The observations and soil characteristics were consistent with those expected for the surface geology and soil landscape described above – including a slightly acidic pH (6.2-6.5), low EC (3.3-4.7 µS/cm), CEC (1.1 meq/100 g) and clay content (1-7%).

Concentrations of the nutrients total nitrogen, TKN, ammonia and phosphorus were detected in both samples, with traces of sulfur and fluoride detected only the surface sample (Split). Cyanide was not detected.

Hydrocarbons as BTEXN and TRH were not detected in either soil sample.

The metals signature was dominated by aluminium and iron as expected, with barium, chromium, copper, lead, manganese, nickel, strontium, thorium, uranium and zinc also detected in both the shallow and deeper samples, with the majority of metals higher in concentration at depth.

4. Groundwater Monitoring Well Inspection

A down-hole camera was used to inspect each of the following pairs of nested groundwater monitoring wells, the locations of which are presented on the attached Figures 2 and 3:

- Asgard 1 wellsite: AB1S and AB1D; and
- Valhalla North 1 wellsite: VNB4S and VNB4D.

These groundwater monitoring wells are intended to be used to establish a baseline data set for the Proposal area, due to their up-hydraulic gradient position (inferred) with respect to site contaminant sources, and are therefore not considered to be impacted from historical wellsite activities, as supported by historical groundwater data obtained from these locations. Each groundwater monitoring well is understood to intercept the uppermost aquifer at each location – the Liveringa (Rockwater, 2016).

4.1 Results

Photographs obtained from down-hole camera footage are Attached in Appendix C to support the below observations and resultant construction details.

Field measured groundwater monitoring well construction details.

Site	Asgard 1	Asgard 1	Valhalla North 1	Valhalla North 1
Well reference	AB1S	AB1D	VNB4S	VNB4D
Coordinates (MGA2020 Zone 51)	714813 m N 7981398 m E	714815 m N 7981398 m E	683175 m N 8006123 m E	683177 m N 8006123 m E
Stick up (m ags)	0.5	0.7	0.5	0.7
Screened interval (m btoc)	30.8-36.3	67.0-76.6	36.6-42.3	66.9-78.4
Measured depth of well (m btoc)	36.3	76.6	42.3	78.4
Construction materials [1]	Class 18 uPVC casing, 96 mm ID, 114 mm OD, slotted intervals with 1.0 mm aperture.			
Standing water level (m btoc)	23.070	21.780	30.686	30.956
Head volume (L)	96	397	84	343
Aquifer	Liveringa	Liveringa	Liveringa	Liveringa

Notes: 1 – Construction materials and diameter were observed in the field and confirmed to be in conformance with the Buru conceptual design presented in Appendix B. Refer to the Buru conceptual design for further details such as gravel pack and bentonite seals, the depths of which will be in relation to depth to the top of screen.

'm ags' denotes metres above ground surface.

'm btoc' denotes metres below top of casing.

Based on the recorded down-hole camera footage, the condition of the construction materials of each of the four groundwater monitoring wells was good – there did not appear to be any noteworthy damage to any of the PVC monitor well casings. Some minor scratches were evident.

A partial organic build up was observed within slots in the lower extents of the screened interval of each well, and insect debris was observed on the casing walls of both deep wells (AB1D, VNB4D) – particularly in proximity to the SWL. A film of insect debris was observed on the groundwater surface at each of these two locations and organic debris appears to have settled at the base of each of the four wells.

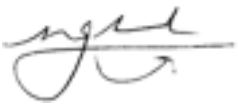
While organic debris may be detected in groundwater samples as trace levels of TRH, and may go on to decompose to form traces of methane, each of these detections are easily discernible from the considerable changes that would occur to groundwater chemistry from gas wellsite contamination. This is supported by groundwater monitoring data obtained from the site to-date. As such, each of the wells are considered appropriate for ongoing representative groundwater monitoring of the surrounding aquifer.

During future wellsite establishment, opportunistic groundwater monitoring bore redevelopment may be undertaken via the use of groundwater abstraction pumps. This would allow for the purging of organic debris from each bore. Additional redevelopment methodology may be applied, however is not consider necessary.

Gemec have appreciated the opportunity to provide our professional services to Bennett Resources for this project.

Please contact me if you require any other information or clarification of the above.

Regards,



Nicolo Jelovsek BSc
Director, Contaminated Land Consultant

6. Limitations of Report

This report pertains to the Valhalla Project only, as identified herein.

The findings and conclusions given in this report are based on the site conditions and those applicable Government regulations that existed at the time the environmental investigation was conducted, and this report prepared. This report was prepared in accordance with accepted environmental practices used by environmental professionals undertaking projects of a similar nature.

Environmental investigation identifies subsurface conditions only at those locations where samples are taken and at the time they are taken. Decisions should not be made on the basis of this report if adequacy of the report has been affected by time as the report is based on conditions that existed at the time the site was investigated.

Gemec warrant that the environmental investigation and the assessments presented in this report identifies actual subsurface conditions at the location investigated and at the time the investigation was undertaken. No other warranty as to the accuracy and completeness, express or implied, is made as to any advice included in this report. While every effort has been made to ensure accuracy, no liability is accepted for errors of fact or opinion herein.

This report was prepared for use by the client, Bennett Resources Pty Ltd and shall only be used by the client for the purpose or purposes that this report was bought into existence. All third parties rely on this report at their own risk. This report is not intended as a substitute for legal advice which can be given only by a qualified legal practitioner.

Notes

All soil concentrations reported in milligrams per kilogram (mg/kg) on a dry weight basis, rinsate concentrations reported in micrograms per litre (µg/L)

'EIL' denotes Ecological Investigation Level

'HIL' denotes Health Investigation Level

'NA' denotes not applicable - primary and QC sample concentration below laboratory LoR

'NE' denotes screening level not established or is under review

'RPD' denotes relative percentage difference

'-' denotes not tested / parameter not obtained

1. EILs apply to upper 2 m of soil profile
2. Dutch SRCeco value based on ABC, 4% clay content, 0.54% total organic matter
3. US EPA Eco SSL for Plants, Soil Invertebrates or Mammals
4. screening level for trivalent chromium Cr(III)
5. screening level derived using average ABCs, 4% clay, pH 5.3 & 1.1 meq/100g CEC
6. value for inorganic mercury

Client Details

Client	Gemec
Attention	Nicolo Jelovsek

Sample Login Details

Your Reference	BME - Valhalla - Valhalla Proposed Well 3
Envirolab Reference	PEG1691
Date Sample Received	28/07/2023
Date Instructions Received	28/07/2023
Date Final Results Expected	04/08/2023

Sample Condition

Samples received in appropriate condition for analysis	See Comments
Number of Samples	4 Soil, 1 Water
Turnaround Time	5 Days
Temperatures / Cooling Methods	8.0°C Ice Pack

Additional Info

Sample storage - waters are routinely disposed at approximately 1 month and soils approximately 2 months from receipt.

Requests for longer term sample storage must be received in writing.

Where no sampling date has been supplied for some or all samples, the date of sample receipt has been used as the associated sampling date. The sampling dates are used to assess compliance to recommended Technical Holding Times.

Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.

Method Summary

Method ID	Methodology Summary
Calc	Calculation
INORG-001	pH - Measured using pH meter and electrode based on APHA latest edition, Method 4500-H+. Please note that the results for water analyses are indicative only, as analysis can be completed outside of the APHA recommended holding times. Solids are reported from a 1:5 water extract unless otherwise specified. Alternatively, pH is determined in a 1:5 extract using 0.01M calcium chloride or a solid is extracted at a ratio of 1:2.5 (AS1289.4.3.1), pH is measured in the extract.
INORG-001_CACL2	pH - Measured using pH meter and electrode based on APHA latest edition, Method 4500-H+. Solids are reported from a 1:5 extract using 0.01M calcium chloride.
INORG-002	Conductivity and Salinity - measured using a conductivity cell at 25°C based on APHA latest edition Method 2510. Soil results reported from a 1:5 Soil:Water extract unless otherwise specified. Please note Resistivity is estimated by calculation and may not correlate with results otherwise obtained using the Resistivity current method (based on AS 1289.4.4.1), depending on the nature of the soil being analysed.
INORG-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
INORG-014	Cyanide - free, total, weak acid dissociable by segmented flow analyser (in line dialysis with colourimetric finish). Solids/Filters and sorbents are extracted in a caustic media prior to analysis. Impingers are pH adjusted as required prior to analysis. Cyanides amenable to Chlorination - samples are analysed untreated and treated with hypochlorite to assess the potential for chlorination of cyanide forms.
INORG-026	Fluoride determined by ion selective electrode (ISE) based on APHA latest edition, 4500-F-C. Solids are reported from a 1:5 water extract unless otherwise specified.
INORG-036	Total Organic Carbon and/or Matter - A titrimetric method that measures the oxidisable organic content of soils.
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-062	TKN - determined colourimetrically. Alternatively, TKN can be derived from calculation (Total N - NOx).
INORG-107	Particle Size Distribution using in house method INORG-107 (sieves and hydrometer).
INORG-118	Hexavalent Chromium by Ion Chromatographic separation and colourimetric determination. Waters samples are filtered prior to analysis. Solids are extracted with an alkaline buffered solution, for air sampling media the same alkali extraction can be used or alternatives from NIOSH/OSHA. For aqueous samples, Total Hexavalent Chromium includes the dissolved Hexavalent Chromium and any Hexavalent Chromium solubilised by the preservative i.e. Sodium Hydroxide from any particulate that may be present.
INORG-122	Soil Density using gas pycnometer
METALS-020	Determination of various metals by ICP-OES.
METALS-020_008A	Determination of exchangeable cations and cation exchange capacity in soils using 1M Ammonium Chloride exchange and ICP-OES analytical finish.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS. Please note for Bromine and Iodine, any forms of these elements that are present are included together in the one result reported for each of these two elements.
ORG-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis. Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of the positive individual TRH fractions (>C10-C40).
ORG-023_F1_TOT	Determination of volatile organic compounds (VOCs) by P&T-GC-MS. Water samples are analysed directly by purge and trap GC-MS. Solids are extracted with Methanol, diluted and analysed by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH*.

Air volume measurements are not covered by Envirolab's NATA accreditation.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from the latest "Australian Drinking Water Guidelines", published by NHMRC. No guideline values have been set for Total Coliforms in drinking water. Increased concentrations should be investigated. Total Coliforms are not considered useful as indicators of the presence of faecal contamination.

Where we have provided guideline values eg. ADWG Health Value, it is the responsiblity of the reader to decide if the water is fit for consumption. Please note that the tests we have conducted are just a selection of common tests to give you a general idea of drinking water quality. There are many other tests included in the ADWG that we have not tested for.

QC Comments

Identifier	Description
[1]	Spike recovery is not applicable due to the relatively high analyte background in the sample (>3* spike level). However, the LCS recovery is within acceptance criteria.
[2]	Duplicate %RPD may be flagged as an outlier to routine laboratory acceptance, however, where one or both results are <10*PQL, the RPD acceptance criteria increases exponentially.

Sample ID	vTRH(C6-C10)/BTEXN in Soil	svTRH (C10-C40) in Soil	Acid Extractable metalsin soil	Misc Inorg - Soil
Split	✓	✓	✓	✓

The '✓' indicates the testing you have requested. **THIS IS NOT A REPORT OF THE RESULTS.**

Additional Info
Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt.
Requests for longer term sample storage must be received in writing.
Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.
TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

CERTIFICATE OF ANALYSIS 329380

Client Details

Client	Gemec
Attention	Nicolo Jelovsek
Address	1/25 Foss St, Palmyra, WA, 6157

Sample Details

Your Reference	**BME- Valhalla**
Number of Samples	1 Soil
Date samples received	01/08/2023
Date completed instructions received	01/08/2023

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date results requested by	08/08/2023
Date of Issue	08/08/2023

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Results Approved By
Diego Bigolin, Inorganics Supervisor
Dragana Tomas, Senior Chemist

Method ID	Methodology Summary
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-026	Fluoride determined by ion selective electrode (ISE) in accordance with APHA latest edition, 4500-F-C.
Metals-020	Determination of various metals by ICP-AES.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Metals-022	Determination of various metals by ICP-MS. Please note for Bromine and Iodine, any forms of these elements that are present are included together in the one result reported for each of these two elements.
Org-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.
Org-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis. Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of the positive individual TRH fractions (>C10-C40).
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.

NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Where matrix spike recoveries fall below the lower limit of the acceptance criteria (e.g. for non-labile or standard Organics <60%), positive result(s) in the parent sample will subsequently have a higher than typical estimated uncertainty (MU estimates supplied on request) and in these circumstances the sample result is likely biased significantly low.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

HSL Application Checklist

HSL APPLICATION CHECKLIST

INTRODUCTION

This checklist is designed to allow assessors to conceptualise potential issues with contaminated land, and how to apply the HSLs. The checklist is designed to trigger responses from the assessor in determining whether the HSLs are applicable or whether consideration should be given to a more site-specific determination of risk. It highlights the key limitations and considerations that are common to contamination assessments and risk assessment.

The checklist summarises the key items from this Application Document.
It is recommended that the Application Document be read in conjunction with the use of this Checklist.

Summary of Steps

Step 1	**Identification of key limitations to the application of health screening levels**
Step 2	**Identification of key receptors and scenarios**
Step 3	**Identification of relevant soil type**
Step 4	**Identification of impacted media and depths**
Step 5	**Identification of source concentrations to be compared with health screening levels**
Step 6	**Selecting appropriate HSL and consideration of combining vapour intrusion and direct contact exposure**
Step 7	**Applying adjustments to the HSLs based on vapour biodegradation, soil organic carbon content, air exchange rate, and soil moisture content Consideration given to soil saturation and water solubility limits**
Step 8	**Adjustments for cancer risk assessment - modification of acceptable cancer risk level, assessment of cumulative cancer risk**

Step 1 – Limitations to HSLs			Comments
Assessing contamination in soil and groundwater should only be carried out by a qualified professional.			
Are guidelines relevant for site? Check the following limitations:			
Have chemicals other than petroleum hydrocarbons been identified at the site? →	NA	May consider site-specific risk asessment (refer to Section 5.2 of the Application Document)	No impact - baseline assessment
Is the groundwater to be used for irrigation purposes? →	N	May consider site-specific risk asessment (refer to Section 2.4.5 of the Application Document)	
Is the site conservation land? →	N	May be required to also assess ecological values (refer to Section 2.4.6 of the Application Document)	
Is the depth to groundwater impact less than 2m bgs ? →	NA	May consider site-specific risk asessment for direct contact May consider soil vapour sampling for vapour intrusion (refer to Section 2.4.2 of the Application Document)	No impact - baseline assessment
Has significant odour been observed at the site? →	N	May be required to also assess odour for sensitive land uses (refer to Section 5.4 of the Application Document)	
Is the identified chemical a result of a solvent spill rather than petroleum spill/leak? →	NA	HSLs may be used where saturation point is not considered (refer to Section 5.3 of the Application Document)	No impact - baseline assessment
Is the identified contamination an atypical petroleum mixture? →	NA	May consider site-specific risk asessment to consider cumulative effects between chemicals (refer to Section 3.6 of the Application Document)	No impact - baseline assessment
Is the soil source thickness significantly different than 2 m? →	NA	For small source thicknesses, HSLs may be overly conservative if source fully depletes. For larger thicknesses HSLs may not adequately characterise risk, however lateral extent of contamination should also be considered. A site-specific HRA may be considered. (refer to Section 2.4.7 of the Application Document)	No impact - baseline assessment
Does the building have a crawl space rather than slab-on-ground construction? →	NA	HSLs may be used as likely to be conservative. However, for situations where habitants may be exposed in crawl space area such as spaces under dwellings which incorporate garages/workshop then consideration may be given to ambient air sampling. (refer to Section 2.3.4 of the Application Document)	No slab-on-ground structures
Does the building have or is likely to have a habitable basement? →	NA	May consider site-specific risk asessment (refer to Section 2.3.3 of the Application Document)	

Note that the HSLs may be used for assessing health risk. In addition to this assessment, legislation requirements still need to be fulfilled which may include other considerations and assessments. Such considerations may include:

- Assessment of environmental values and ecological impacts
- Consideration of sustainability issues
- Risks for extraction and use of groundwater
- Soil source ongoing source to groundwater contamination
- Local planning requirements, such as sensitive uses under commercial zones, or future land use zones
- Social impacts and consultation with stakeholders

Step 2 – Identify receptors and scenarios to be considered

Check the receptors and scenarios to be assessed. Note that receptors and scenarios may require consideration of future land use planning and local regulations pertaining to site redevelopment.

	☐	Residential use (refer to Sections 2.1.1 and 2.3.1 of the Application Document)
HSL-A	☐	Low-Density Residential – assumes access to soils with no management controls on site. Assessment may consider surface soils with direct contact, intrusive maintenance worker protection, and consider using surface soil HSL for all soils down to 3 m depth to protect uncontrolled excavation of contamination.
HSL-B	☐	High-Density Residential – assumes limited access to surface soils with management controls on site. Assessment may consider surface soils/dust with limited direct contact. Intrusive maintenance workers may be protected under suitable site management plan.
HSL-A	☐	Medium-Density Residential with grassed open space – assumes access to soils with management controls on site. Assessment may consider surface soils with direct contact and subsurface soils through vapour intrusion. Intrusive maintenance workers may be protected under suitable site management plan.
HSL-B	☐	Medium-Density Residential with permanent paving open space – assumes limited access to soils with management controls on site. Assessment may consider surface soils/dust with limited direct contact. Intrusive maintenance workers may be protected under suitable site management plan.
HSL-A (for VI) *HSL-A or HSL-B (for DC)*	☐	Low- or Medium-Density Residential with single basement garage – for vapour intrusion, low-density residential (HSL-A) may apply due to low air exchange rate for basement garage. HSL depth is displaced by depth of basement. For soil direct contact HSLs, select from above medium density scenarios based on access to soils. Intrusive maintenance workers may be protected under suitable site management plan (refer to Section 2.3.3 of the Application Document).
HSL-D (for VI) *HSL-B (for DC outside footprint)*	☐	Medium- or High-Density Residential with communal basement car park – assumes no access to soils with management controls on site. HSL depth is displaced by depth of basement. Intrusive maintenance workers may be protected under suitable site management plan. Note that areas outside of the basement footprint may be required to be assessed as a building without basement and with limited direct contact with soil. Also, limited exposure time for basement users and therefore HSL for Commercial Worker may be used for vapour intrusion (refer to Section 2.3.3 of the Application Document).
HSL-C	X	Recreational / Public Open Space (refer to Section 2.1.2 of the Application Document)
	☐	Parks, ovals, pedestrian areas
	☐	National parks, conservation areas – may be required to also assess ecological values (refer to Section 2.4.6 of the Application Document)
HSL-D	☐	Commercial / Industrial Workers (refer to Section 2.1.3 of the Application Document) – considers only healthy adults under normal working conditions. Does not consider sensitive commercial uses such as schools, day care centres and medical practices.
	☐	Commercial sensitive users – may consider using residential HSLs or a site-specific HRA (refer to Section 2.4.1 of the Application Document)
	☐	Agricultural land – may consider a site specific HRA (refer to Section 2.4.5 of the Application Document)
	☐	Shallow intrusive workers down to 1 m deep. May require assessment of direct contact for soils surface to <2 m (refer to Sections 2.1.4 and 2.4.3 of the Application document)
	☐	Deep intrusive workers down to >1 m deep, such as sewer. Should be managed with appropriate procedures and work practices for confined spaces (refer to Section 2.4.4 of the Application Document)

Is a site management plan (that includes specific occupational hazard management for works on the site) to be implemented on the site (controlled site)? → **N** May not need to consider health risks to intrusive workers

Step 3 – Identify soil type relevant to site (soils above impacts in soil and/or groundwater)

Comments

Note the following before selecting soil type for use in assessment:

1. The prime parameter that influences the value of the HSL is the air filled porosity and volatility of the specific chemical. The higher the air filled porosity the greater the potential for volatile chemicals to migrate vertically through the soil profile.
2. The selection of a generic soil type requires knowledge of the soil profile across the site.
3. The selection of generic soil types should take into account the predominant characteristics of the soil profile and depth of contamination. The generic soil types assume a uniform profile, which at many, if not all, sites will not be the case. Where the overlying profile is predominantly fine materials (clays) (i.e. > 50% for soil column), these may be considered as the generic soil type. If the profile has a significant proportion of loose/coarse materials (including backfill) (i.e. > 50%), these materials may be considered as the generic soil type.
4. Air filled porosity is affected by moisture content. The wetter the soil, the lower the air filled porosity. Generic soil types have assumed a typical moisture content for the profile typical of average soil conditions occurring at depth. Moisture content will vary greatly by location and season. Moisture content will also vary between sub-categories of soil, e.g. between sand and clayey sand. HSLs may be adjusted based on moisture content. This is done in Step 7.
5. The selection of appropriate soil type is discussed in Section 3.2 of the Application Document.

Is there one dominant soil type on the site (> 50% of soil column)?
Or can a geological setting be conservatively identified (i.e. allowing greater vapour transport)? →

- [X] Y - Proceed
- [ ] N - Consideration may be given to assuming the more conservative soil type, or may be given to a site-specific HRA (refer to Section 4.6 of the Application Document)

Has excavated area(s) been backfilled with more porous materials ? →

- [ ] Y - Consideration should be given to adopting a more porous soil type (refer to Section 3.2 of the Application Document)
- [ ] N - Proceed

Does the site lithology contain rock formations
or soil with large cracks that can form preferential pathways? →

- [X] Y - The derived HSLs do not include lithogies with rock formations. Consideration may be given to using soil-vapour sampling or carrying out a site-specific HRA (refer to Section 4.6 of the Application Document)
- [ ] N - Proceed

Identify HSL soil type relevant to site and assessment (above impacts)

The soil profile properties have been based on a predominant soil texture grouping developed by the US Department of Agriculture. The 12 texture classes have been grouped into 3 groups: sand, silt and clay. The groupings of the classes are based on mean particle size and saturation porosities. Refer to Section 3.2 for further discussion on the soil properties.

HSL soil type selected:

- [ ] **Sand** – Properties selected to be representative of a coarse textured undisturbed soil profile. Consists of texture classes sand, sandy clay.
- [ ] **Silt** – Properties selected to be representative of a coarse textured undisturbed soil profile. Consists of texture classes silt, silty clay.
- [ ] **Clay** – Properties selected to be representative of a fine textured undisturbed soil profile. Consists of texture classes clay.
- [X] **Other** – Including soil with large cracks (preferential pathways) and fractured rock (basalt, sandstone, siltstone, limestone) - refer to Section 4.6 of the Application Document. Soil vapour measurement is preferred to soil or groundwater. Due to fractures and preferential vapour pathways in rock, consideration should be given to overlying weathered soil, or to using HSLs for surface soil in sand.

For soil assessment (texture classification) undertaken in accord with AS 1726 the classifications of sand, silt and clay may be applied as coarse, fine with liquid limit less than 50%, and fine with liquid limit greater than 50% respectively.

Where there is uncertainty, laboratory analysis should be carried out. This may include parameters for detailed particle analysis and exact soil texture sub-class, and saturation porosity.

Step 4 – Impact media		Comments
Are there impacts to media other than soil and groundwater? (e.g surface water, biota, odours etc) Note: aesthetic issues (odours/staining/ecological impacts etc.) to be addressed separately →	NA As well as human health assessment, consideration of other issues such as ecological, aesthetics, etc. may be required.	No impact - baseline assessment
Soils Are there soil impacts remaining on the site? →	NA Y - Proceed NA N - Go to groundwater section	No impact - baseline assessment
Depth to soil impacts. Note if considering basements, depths need to be displaced e.g. a 3 m deep basement means surface to <1 m represents 3 m to <4 m. (refer to Section 2.3.3 of the Application Document) ☐ surface to <1 m ☐ 1 m to <2 m ☐ 2 m to <4 m ☐ 4 m and deeper ☐ Displacement due to basement Distance of displacement (m) _____		
Is the site of interest an uncontrolled site where excavation activities such as construction may result in subsurface soil contaminantion brought to surface in the future? →	☐ Consideration may be given to use of HSLs for direct contact and surface HSLs for vapour intrusion, for deeper soils. A site management plan may be used to address uncontrolled excavation at a site. (refer to Sections 2.3.1, 3.4.1, and 4.7 of the Application Document)	
Groundwater Are there groundwater impacts beneath the site? →	NA Y - Proceed ☐ N - Go to soil vapour section	No impact - baseline assessment
Is the depth to groundwater less than 2 m? →	☐ Y - The HSL values may not adequately address this scenario. A site-specific HRA may be considered. Soil vapour sampling may be used to assess vapour intrusion. (refer to Section 2.3.3 of the Application Document)	
Depth to groundwater impacts. Note if considering basements, depths should be displaced e.g. a 3 m deep basement means surface to 2 m represents 5 m (refer to Sections 2.3.3 of the Application Document). With basements, groundwater HSLs may not adequately characterise risks where the groundwater level is within 2 m of basement foundation. ☐ 2 m to <4 m ☐ 4 m to <8 m ☐ 8 m and deeper ☐ Displacement due to basement Distance of displacement (m) _____		

Step 4 – Impact media (cont.)		Comments
Soil vapour Has soil vapour sampling been used to characterise vapour intrusion at the site? → [ ] Y - Proceed; [X] N - Proceed to Step 5 Depth to soil impacts. Note if considering basements, depths need to be displaced e.g. a 3 m deep basement means surface to <1 m represents 3 m to <4 m. (Refer to Section 2.3.3 of the Application Document.) [ ] surface to <1 m [ ] 1 m to <2 m [ ] 2 m to <4 m [ ] 4 m to <8 m [ ] 8 m and deeper [ ] Displacement due to basement Distance of displacement (m) _____ In using soil vapour sampling, please note the following: 1) It is recommended that soil vapour samples be taken as laterally close to a vapour source as possible (within or above). 2) Any sample taken within 1 m of the open air is subject to high levels of uncertainty due to atmospherical and meteorological effects. This includes the base and wall of excavation pits. 3) For sites subject to redevelopment with residential or commercial buildings, the soil vapour profiles are subject to change due to presence of concrete slabs. Caution is required on the use of soil vapour samples that are not within a soil source and in locations where buildings currently do not exist (refer to Section 1.6 of the Application Document).		

Step 5 – Selection of relevant source concentrations		Comments
Soil concentrations		
1. Is the investigation site likely to be subdivided into smaller lots? → [ ] Y - Statistical analysis using entire data set may not be applicable. Consideration may be given to using the maximums or using a sub-set for statistical analysis (refer to Section 3.4.1 of the Application Document) [X] N - Statistical analysis using entire data set may be applicable		
2. Is the site public open space / recreational land where users are unlikely to be in the same location for extended period? → [X] Y - Statistical analysis using entire data set may not be applicable. Consideration may be given to using the maximums or using a sub-set for statistical analysis (refer to Section 3.4.1 of the Application Document) [ ] N - Statistical analysis using entire data set may be applicable		
<u>If statistical analysis is appropriate consideration should be given to the following methodology (refer to Section 3.4.1 of the Application Document):</u> 1. Samples should be sub-divided into appropriate depth ranges as defined by HSLs (i.e. surface to <1 m, 1 m to <2 m, 2 m to <4 m, 4 m+). Note if considering basement, the appropriate displacement distance should be accounted for. 2. For each depth range, the statistical mean (e.g. 95% UCL arithmetic mean) soil concentration should be calculated for each chemical. One approach is described in the NSW EPA *Contaminated sites: Sampling design guidelines* (1995). The coefficient of variance test described in the document may be used to determine if the distribution is normal or lognormal. Consideration of other statistical methods may be adopted if justified (e.g. distribution does not fit a normal or lognormal distribution). 3. For samples with no detection, it is recommended to use half the detection limit during statistical analysis. 4. If the standard deviation is very large (due to outliers or low number of samples) the statistical mean may be higher than the maximum concentrations. In this case it is recommended to use the maximum. 5. It is recommended to keep note of maximum concentrations as well as statistical mean concentrations. Maximum concentrations may be required to address potential acute exposure issues.		
Groundwater concentrations		
Has floating product been identified in any well? → [NA] Y - Refer to point (a)		
(a) If PSH is identified, dissolved phase is likely to contain chemicals at solubility limits. Proceed with HSL comparison, noting that if there is at least one chemical for which HSLs in groundwater is limiting (i.e. not all chemical HSLs are NL) then presence of PSH may be a potential vapour risk to site users (refer to Section 3.4.2 of the Application Document). Also note that the presence of PSH may trigger other legislative requirements for remediation/monitoring.		
Is the area of interest represented by a single groundwater location or multiple ? → [X] Single - small area of interest such as residential dwelling may be represented by the maximum groundwater concentration if the dwelling location is unknown, otherwise if the building footprint is known, the groundwater well nearest to the point of interest may be used. [ ] Multiple - where exposure may occur over larger areas such as recreational parkland, consideration may be given to averaging the concentrations across the area of interest.		Mostly single wells
In deciding which set of monitoring data is most useful for analysis consideration may also be given to: - Historical results to determine trends in groundwater concentrations (i.e. the likelihood that concentrations may increase) - Upgradient wells and background concentrations - Groundwater flow direction (Refer to Section 3.4.2 of the Application Document.)		

Step 5 – Selection of relevant source concentrations (cont)		Comments
Soil vapour concentrations		
Is the area of interest represented by a single or multiple vapour location? →	NA Single - small area of interest such as residential dwelling may be represented by the maximum soil vapour concentration if the dwelling location is unknown, otherwise if the building footprint is known, the groundwater well nearest to the point of interest may be used. NA Multiple - where exposure may occur over larger areas such as recreational parkland, consideration may be given to averaging the concentrations across the area of interest.	Not applicable - baseline assessment
Are soil vapour samples measured in shallow soil less than 1 m from the surface where there is no existing slab or concrete paving? →	Y - Measurements are subject to influence from weather and atmospheric conditions and may not be considered reliable.	
Are soil vapour samples measured in areas where there is no existing slab or concrete paving, and the site is planned to be redeveloped where a building will exist (residential/commercial/ industrial use)? →	Y - Soil vapour samples not measured within a soil or groundwater source, may not be representative of the soil vapour in the future when a building is located on site. The placement of an impermeable barrier such as a concrete slab can cause build-up of soil vapour within the soil and sub-slab, above levels measured where there is no slab present. Note soil vapour measurements from within soil and groundwater sources are not subject to vapour build-up as the soil vapour is likely to be at its maximum concentration when located within the source.	
Soil vapour measurements may be taken at multiple depths, including within the source zone, above the source zone, and directly under a building foundation. Each of the measurement depths should be considered individually.		
Refer to Sections 3.4.3 and 1.6 of the Application Document.		

Step 6 – HSL determination and combined vapour intrusion and direct contact

		Comments
HSL determination		
HSLs and satuaration/solubility limits are presented in the Appendix B HSL tables. Select the appropriate HSLs for vapour intrusion from tables for: 1) Each selected receptor listed in Step 2 2) Dominant soil texture classification listed in Step 3 3) Source depth listed in Step 4 HSLs may be compared to soil/groundwater/soil vapour source concentrations determined in Step 5. Note for TPH C6 to C10, BTEX should be subtracted from analytical result prior to comparing with HSL		
1. Is the HSL value Not Limiting 'NL'? →	[X] Y - Indicates that vapour reaches saturation point and cannot increase to a point which would result in an unacceptable health risk [ ] N - Continue with Question 2 for groundwater, or proceed to Question 3	
2. Is groundwater HSL not 'NL' and PSH identified in water? →	[NA] Y - May indicate potential vapour risk (refer to Section 3.4.2 of Application Document) [NA] N - Proceed to Question 3	
3. Are comparisons being made against soil HSLs? →	[NA] Y - Proceed to Question 4 [NA] N - Proceed to Question 5	Not applicable - baseline assessment
4. Does direct contact need to be considered as well as vapour intrusion? →	[ ] HSL-A Low-Density Residential - surface soils, and possibly subsurface soils if determined to be relevant (refer to Section 4.7 of Application Document). Proceed to 'Combined pathways exposure' [ ] HSL-B High-Density Residential – surface soils. Proceed to 'Combined pathways exposure' [ ] HSL-C Open Space Recreational – surface soils.Proceed to 'Combined pathways exposure' [ ] HSL-D Commercial / Industrial – surface soils. Proceed to 'Combined pathways exposure' [ ] Intrusive Maintenance Worker – down to 2 m. Proceed to 'Combined pathways exposure' [X] N - Proceed to Question 5	
5. Do cross-scenario exposure need to be considered? (eg. adjacent residential and open space) →	[ ] Y - Proceed to 'Combined pathways exposure' [X] N - Proceed to Step 7	

Combined pathways exposure

Refer to Section 3.3 of the Application Document.
Combined exposures may occur on the same property where indoor vapour intrusion occurs concurrently with outdoor direct contact.
Combined exposure may also occur on adjacent properties, e.g. vapour intrusion on residential property and direct contact on adjacent open space (park).
For the given scenarios/chemicals, list the HSLs.

Where a vapour intrusion HSL is Not Limiting (NL) the chemical / scenario does not need to be considered in the combined pathway exposure.

The combined exposure is assessed as follows:

Multiple exposure pathways: $$\textbf{Cumulative Fraction} = \frac{C_{\text{Under Building}}}{HSL_{\text{Vapour Intrusion}}} + \frac{C_{\text{Outside Building}}}{HSL_{\text{Direct Contact}}}$$ where vapour intrusion can refer to soil, groundwater or soil vapour source

Multiple exposure scenarios: $$\textbf{Cumulative Fraction} = \frac{C_{\text{Land use 1}}}{HSL_{\text{Land use 1}}} + \frac{C_{\text{Land use 2}}}{HSL_{\text{Land use 2}}}$$ where the HSLs may refer to HSLs for vapour intrusion or direct contact

If a given C/HSL fraction is less than 0.1, the contribution of risk may be considered insignificant and the cumulative exposure need not be assessed for this scenario.
Where a cumulative fraction is less than 1 risk is normally acceptable. Where the value exceeds 1 a site-specific assessment should be undertaken, or proceed to Step 7.

Step 7 – HSLs and adjustments (vapour intrusion)		Comments
HSL adjustments (vapour intrusion only) For each adjustment, careful consideration and justification is required. **1. Vapour biodegradation** (refer to Section 4.2 of Application Document) Prior to applying attenuation factor for vapour degradation it is recommended to read the source documentation (Davis et al. 2009). The minimum requirements for allowing attenuation factors for vapour degradation are as follows: 1. Is there evidence of oxygen penetration? → NA Y - Requires measurement of oxygen in soil gas with at least 5% at 1 m depth (refer to Section 4.2.1 of Application Document) NA N - Attenuation factor may not be applicable 2. Is the source depth 2 m or deeper? → NA Y - Continue to Question 3 (refer to Section 4.2.2 of Application Document) NA N - Attenuation factor may not be applicable 3. Does the slab have one side less than 15m length? → NA Y - Degradation factor may apply. Less than 4 m depth, a factor of 10 may apply. 4 m and deeper, a factor of 100 may apply. (refer to Section 4.2.3 of Application Document) NA N - Attenuation factor may not be applicable **2. Soil organic carbon content** (refer to Section 4.3 of Application Document) May be used to adjust soil HSLs only. Soil HSLs were based on fraction organic carbon content of 0.003. HSL may be adjusted if background levels of organic carbon content at the same depth as source is different from baseline. Background sample must not be contaminated with hydrocarbons. If surface soil, background sample in open space may not be appropriate to use if comparing for soil under slab. Adjustment is linear, i.e. doubling the organic carbon will double the HSL. Applies only to soil HSL for vapour intrusion. **3. Air exchange rate** (refer to Section 4.4 of Application Document) HSLs are based on air exchange rate (AER) of 0.6 h^{-1} for residential and 0.83 h^{-1} for commercial. Careful justification may be required prior to changing AER. Consideration should be given to weather conditions, practice of leaving doors/windows open, or closed in climate controlled building. New buildings tend to be more air tight to comply with energy saving regulations. For soil and groundwater, adjustment is linear with respect to AER. For soil vapour, adjustment is variable depending on soil type and depth. Refer to the charts in Appendix D to determine the adjustment factor. **4. Moisture content** (refer to Section 4.5 of Application Document) HSLs may be adjusted if moisture content in soil is significantly different from baseline HSLs. The baseline moisture contents used were (dry wt) for sand 8%, silt 22% and clay 20%. Moisture content should be representative of long-term moisture content and not short-term result from recent rain event. Also note that for a development with future building where no building currently exists, moisture contents on site may not be representative for the future state of the site. HSL scaling factors for different land use/chemicals/soils are presented in Appendix C of the Application Document and may be applied as described in Section 4.5.		Not applicable - baseline assessment

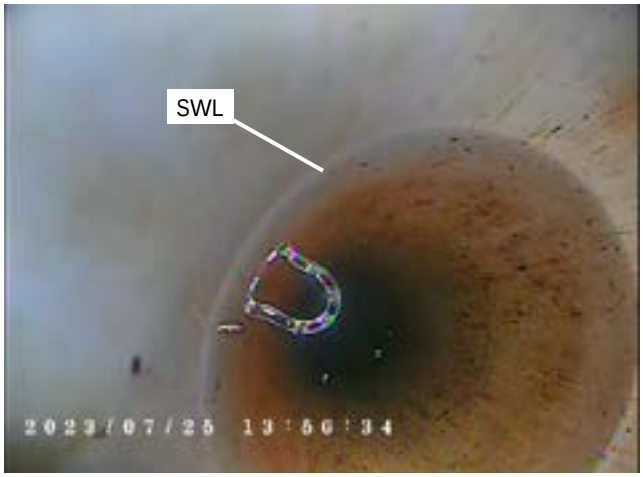
Step 7 – HSLs and adjustments (vapour intrusion) (cont.)		Comments
Saturation/solubility limits (soil and groundwater HSLs only)		
Apply the adjustments to the HSLs for vapour intrusion by multiplying by the determined factors.		
After applying the adjustments to the HSLs, is the revised HSL greater than the solubility / saturation limit? →	[X] Y - Indicates that the predicted source concentration to produce an unacceptable vapour risk is higher than the saturation point. The revised HSL is not limiting to vapour (NL). Note this does not apply to soils with direct contact. [ ] N - Revised HSL may be compared with measured source concentrations.	
Multi-Pathway Exposure		
1. Is inclusion of direct contact with soils required? →	[NA] Y - Repeat Step 6 with Adjusted Vapour Intrusion HSLs and Direct Contact HSLs [NA] N - Proceed to Question 2	
2. Is cross-scenario exposure required to be assessed?	[NA] Y - Repeat Step 6 with Adjusted Vapour Intrusion HSLs and Direct Contact HSLs [NA] N - Proceed to 'Screening assessment'	
Screening assessment		
Is the adjusted HSL less than source concentration? →	[ ] Y - Indicates potential health risk [X] N - Considered within acceptable health risks. If cancer endpoint (benzene) may also need to assess cancer risk level and cumulative cancer risk in Step 8	
Is the maximum soil, groundwater or soil-vapour concentration greater than the HSL by more than one or two orders of magnitude? →	[ ] Y - Indicates potential acute risk around hotspot [X] N - Considered within acceptable health risks	
If the screening assessment indicates the potential for unacceptable health risk, consideration may be given to further investigations such as further contaminantion deliniation, site-specific health risk assessment or site management. Before deciding the appropriate form of action considerations should include: - The magnitude of HSL exceedence - The nature of the source - The time frame required for managing health risks - Other statutory requirements		

Step 8 – Cancer risk assessment		Comments
Acceptable cancer risk (Refer to Section 5.1 of Application Document) HSLs for benzene have been based on 1 x 10^{-5} cancer risk. In some jurisdictions it may be required to assess carcinogenic risks based on 1 x 10^{-6} cancer risk. 1) The HSLs are linearly related to acceptable risk. HSLs based on a cancer risk of 1 x 10^{-6} may be calculated by dividing the HSLs in Appendix B by a factor of 10. 2) If the HSL is NL (vapour only HSL), it is possible that it may become limiting if the HSL is within a factor of 10 of the soil saturation concentration (or solubility limit for groundwater). 3) If soil or groundwater source concentration is less than an order of magnitude of the saturation concentration / solubility limit (in Appendix B), then even dividing the non-limiting HSL by 10 would result in an acceptable risk. Hence there is no need to proceed further. 4) If soil or groundwater source concentration is within an order of magnitude of the saturation concentration / solubility limit it is recommended to calculate the revised HSL from the non-limiting HSL. This process is outlined as follows: **Calculating revised HSL for 10^{-6} cancer risk from non-limiting HSL.** 1) The non-limiting HSLs are presented in Friebel & Nadebaum 2011 (Part 1). 2) The derived HSLs are presented in Appendix F. 3) Find the pages that correspond to the source type (soil, groundwater, soil vapour) for the given scenario (residential / commercial / recreational / intrusive maintenance). Note indicator chemicals and TPH have been separated. 4) For the corresponding soil category, depth and chemical, the Vapour Intrusion HSL and saturation/solubility concentration is presented in the columns on the right. 5) If this HSL is divided by 10 and the result is greater than Csat (for soil) or saturation limit (for groundwater), then the revised HSL is still NL. Otherwise the result is the revised Vapour HSL.		
Cumulative cancer risk (Refer to Section 3.6.1 of Application Document) HSLs for benzene have been based on 1 x 10^{-5} cancer risk. In most jurisdictions it is required to assess total carcinogenic risks based on 1 x 10^{-5} cancer risk. If HSLs are not NL for benzene and another carcinogenic chemical is identified, such as PAHs, follow the proedure outlined in Section 3.6.1. The cumulative fraction may also be applied to more than two chemicals. Note that multiple sources should be considered. For example, a resident may be exposed through direct contact with PAHs in surface soil, but also benzene vapours from soil and groundwater. For vapour risk (benzene), the risk contribution should consider the greatest risk for the receptor from all vapour sources. Because multiple sources do not have an additive effect, the source with the greatest risk needs to be identified (refer to Section 3.5 for discussion on multiple vapour sources). This means that for all sources/depths the source concentration should be divided by their respective HSLs to calculate the benzene contribution to cumulative risk. The highest fraction determines which source poses the greatest risk to receptors. The same may be carried out for carcinogenic PAHs. The sum of the highest benzene fraction and the highest PAH fraction results in the highest possible cumulative fraction.		

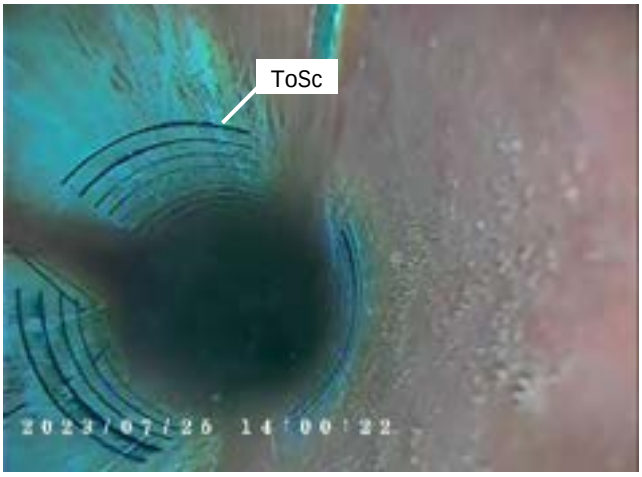
Appendix C – Site Photographs

SB1 soil profile.

SB1 location and soil characteristics.

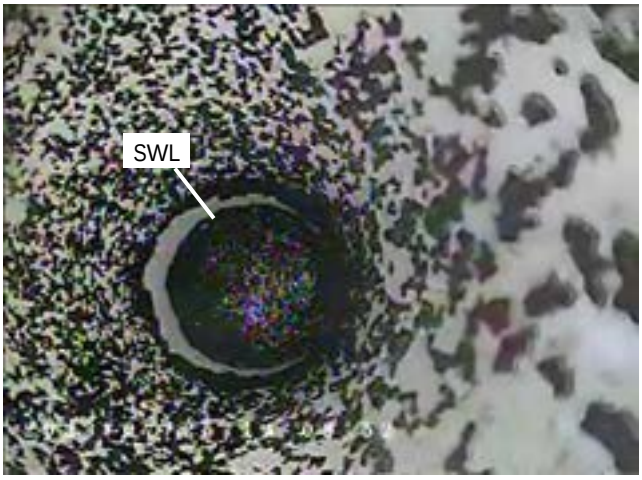


AB1S standing water level (SWL) 23.070 metres below top of casing (m btoc).



AB1S top of screened interval (ToSc) 30.8 m btoc.

AB1S debris build up on casing wall and bottom of well.



AB1D insect debris build up on casing wall above SWL at 21.780 m btoc.

AB1D insect debris build up on casing wall below SWL.

AB1D ToSc at 67.0 m btoc.

AB1D debris build up on casing wall and bottom of well.

VNB4S casing join showing PVC cement.

VNB4S casing below SWL of 30.686 m btoc.

VNB4S ToSc at 36.6 m btoc.

VNB4S bottom of well of 42.3 m btoc.

VNB4D insect debris at dry casing join 6.7 m btoc.

VNB4D blank casing condition.

VNB4D debris below SWL at 30.956 m btoc.

VNB4D ToSc at 66.9 m btoc.

VNB4D bottom of well at 78.4 m btoc.

ERM Reference: 0594916

Dear Samantha,

Subject: Valhalla Baseline Air Quality Monitoring Six Monthly Report

1. INTRODUCTION

Bennett Resources Pty Ltd (BNR) has commissioned ERM Australia Pacific Pty Ltd (ERM) to provide oversight of the implementation of a baseline ambient air quality monitoring program for the Valhalla Gas Exploration and Appraisal Program (the Project). This report provides details of the monitoring locations, methodology, laboratory procedures, and monitoring results from 24 June 2021 to 21 November 2021.

2. MONITORING PROGRAM

The monitoring program has been implemented to gather information on baseline levels of the following pollutants:

- Particulate matter less than 10 microns in aerodynamic diameter (PM_{10});
- Particulate matter less than 2.5 microns in aerodynamic diameter ($PM_{2.5}$);
- Deposited dust;
- Volatile organic compounds (VOCs); and
- Methane.

Monitoring has been conducted across a total of five locations, inclusive of two locations in the proximity of community receptors (AQ_CS, AQ_CN) and three locations in the vicinity of proposed project infrastructure (AQ_S1-S3). These extend over a distance of approximately 66 km between the northernmost and southernmost monitoring locations.

The coordinates and pollutants monitored at each monitoring location are tabulated in Table 2.1. Figure 2.1 shows these locations overlaid on aerial imagery.

Table 2.1: Summary of monitoring locations and pollutants monitored

Location ID	Location (MGA94, Zone 51K)		Pollutants Monitored				
	Easting (mE)	Northing (mN)	$PM_{2.5}$	PM_{10}	Deposited Dust	VOCs	Methane
AQ_CS	696 179	7957 536	✓	✓	✓	✓	-
AQ_CN	676 816	8020 196	✓	✓	✓	✓	
AQ_S1	686 474	8003 892	-	-	-	-	✓
AQ_S2	696 945	7979 790	✓	✓	✓	✓	✓
AQ_S3	697 114	7973 523	-	-	-	-	✓

3. CLIMATE

As mentioned in Section 1, the baseline monitoring has been conducted between June and November. In the northern parts of Western Australia, the dry season is typically between May and October which covers five of the six months of the baseline monitoring. The wet season is typically between November and April. The closest Bureau of Meteorology (BoM) automatic weather station to the Project is Fitzroy Crossing Aerodrome, located approximately 75 km to the north east. Table 3.1 presents temperature and rainfall statistics for this station.

It is noted that the highest mean maximum temperature is experienced in November and the lowest mean minimum temperature is experienced in July. The highest mean rainfall is experienced during January and the lowest mean rainfall is experienced during September.

Table 3.1: Selected climate statistics for BoM Fitzroy Crossing Aerodrome (#3093)

Parameter	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Mean maximum temperature (°C)	37.6	36.9	37.1	36.9	33.3	30.5	31.1	33.4	37.5	40.3	40.9	39.3
Mean minimum temperature (°C)	25.2	24.8	24.0	20.8	16.0	13.1	12.3	13.6	18.5	23.1	25.6	25.8
Mean rainfall (mm)	185.8	144.4	108.1	24.9	15.8	6.5	5.2	2.6	0.4	13.9	31.4	136.2

4. MONITORING METHODOLOGY

4.1 Particulate matter

4.1.1 Overview

Monitoring of PM_{10} and $PM_{2.5}$ has been conducted at three locations using a Thomson Environmental Systems (TES) Dust Master Pro 7000 continuous monitors. The monitoring equipment was installed by Bennett Resources. Monitoring data was collected on an hourly basis and then 24-hour averages were calculated. The validated daily average PM_{10} and $PM_{2.5}$ concentrations have been provided by TES. The monitors were installed on 22 June and 23 June 2021.

4.1.2 Monitoring Criteria

The monitoring results have been compared against the National Environment Protection Measure Ambient Air Quality (NEPM AAQ) standards. Table 4.1 presents the NEPM AAQ standards for particulate matter.

Table 4.1: NEPM AAQ standards

Pollutant	Averaging Period	Criteria (µg/m³)	Source
Particulate matter (as PM_{10})	24 hour	50	National Environment Protection Measure Ambient Air Quality (NEPM AAQ)
	Annual	25	
Particulate matter (as $PM_{2.5}$)	24 hour	25	
	Annual	8	

4.2 Dust deposition

4.2.1 Sampling procedure

The monitoring of dust deposition has been conducted using dust deposition gauges. Sampling of deposited dust occurred in monthly intervals and has been conducted at three monitoring locations. The gauges were installed on 21 June and 22 June 2021.

4.2.2 Laboratory analysis

The dust deposition samples have been analysed for ash content, combustible matter and total insoluble matter by ALS Laboratories, who hold NATA accreditation for the analysis.

4.2.3 Monitoring Criteria

The deposited dust results have been compared against an annual average criterion of 4 g/m^2/month.

4.3 Volatile organic compounds (VOCs)

The sampling method has involved the collection of 24-hour time-integrated samples into 6-litre Silonite®-lined evacuated canisters, with canister preparation and post-sampling analysis undertaken by ALS laboratories who are NATA accredited for the TO-15 analytical method.

4.3.1 Sampling Procedure

Prior to sample collection, each canister is cleaned and laboratory certified. This procedure ensures that the canisters are free of residual contamination prior to sample collection. Sample collection involved connecting a calibrated flow regulator to the canister inlet and opening the inlet valve such that a sample is drawn into the canister at a steady, continuous rate over the 24-hour sampling period. At the completion of sampling, the canister valve is closed, the remaining vacuum recorded, and the canister returned to the laboratory for analysis.

4.3.2 Laboratory analysis

Evacuated canister samples have been analysed for the following VOCs:

- Benzene;
- Toluene;
- Ethylbenzene; and
- Xylenes (as sum of meta-, para- and ortho- isomers).

A ‘limit of reporting’ (LOR) of 0.5 parts per billion by volume (ppbv) was attained for each compound analysed via TO-15. In the case of xylenes, the LOR applies to each individual isomer, equating to a total LOR of 1.5 ppbv.

4.3.3 Laboratory Quality Control Procedures

Laboratory quality control (QC) procedures were undertaken on each sample batch to ensure the accuracy of the laboratory analysis. These procedures included:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits – The quality control term Laboratory Duplicate refers to a randomly selected intra-laboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity.

- Method Blank (MB), Laboratory Control Spike (LCS) and Laboratory Duplicate Control Spike (DCS) Report; Recovery and Acceptance Limits – The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control terms Laboratory Control Sample (LCS) and Laboratory Duplicate Control Sample (DCS) refers to certified reference materials, or known interference free matrices spiked with target analytes. The purpose of these QC parameters is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS and DCS.

All samples have been assessed to be compliant with all QC standards. A copy of the Chain of Custody (COC) documentation is provided in Appendix A. A copy of the Laboratory Certificates of Analysis is provided in Appendix B.

4.3.4 Screening Criteria

Screening criteria have been compiled to provide a means of assessing whether monitoring results are elevated so as to warrant additional investigation. With this objective, the following sources of screening criteria were adopted:

- NEPM Air Toxics Monitoring Investigation Levels (MILs), (NEPC, 2011); and
- ATSDR Minimal Risk Levels (MRLs), (ATSDR, 2017).

MILs provided within NEPC (2011) have been adopted as a priority, given their endorsement in a local context as part of the NEPM Air Toxics program. In this role, the MILs are applied by each state government in screening whether ambient VOC monitoring results are indicative of the need for detailed investigation.

ATSDR MRLs have been adopted as screening criteria for VOC/averaging period combinations for which MILs are not available. This approach has been adopted given the compatibility in the intended application of the MRLs, which are also provided as a screening tool for assessing where potential health effects should be considered more closely.

As further context, it is also noted the ATSDR MRLs are considered extensively in the derivation of MILs (NEPC, 2004), and are in some cases identical to the corresponding MILs (e.g. benzene). It is also noted that exceedances of either MILs or MRLs do not mean that adverse health effects will occur. Table 4.2 provides a summary of the adopted screening criteria.

Table 4.2: Summary of adopted screening criteria

VOC	Averaging Period	Screening Criteria (µg/m³)	Source
Benzene	24 hour	29	ATSDR (2017)
	Annual	9.6	NEPC (2011)
Toluene	24 hour	3,770	NEPC (2011)
	Annual	377	
Ethylbenzene	24 hour	21,700	ATSDR (2017)
	Annual	260	
Xylenes	24 hour	1,085	NEPC (2011)
	Annual	868	

Notes:

- ATSDR (2017) acute and chronic MRLs applied as representative of 24 hour and annual average criteria (respectively).
- All values converted from volumetric to mass-based units at conditions of 25°C and 1 atmosphere.

24-hour criteria are suitable for the assessment of individual monitoring results, whilst annual criteria are suitable for the assessment of average concentrations across multiple monitoring events.

5. MONITORING RESULTS

This section presents the monitoring results for particulate matter, the dust deposition, VOCs and methane from 24 June 2021 to 21 November 2021.

5.1 Particulate matter

Table 5.1 to Table 5.5 present the maximum 24-hour average and monthly average PM_{10} and $PM_{2.5}$ concentrations at the three monitoring locations for each month of the monitoring data.

Table 5.6 presents a summary of the maximum 24-hour average and monthly average PM_{10} and $PM_{2.5}$ concentrations at the three monitoring locations for all months of monitoring. For PM_{10}, Location 399 (AQ_S2) has the highest maximum 24-hour average concentration (303 µg/m^3), the highest period average (80.1 µg/m^3) and the most exceedances of the 24-hour average criterion at 96. For $PM_{2.5}$, Location 397 (AQ_CS) has the highest maximum 24-hour average concentration (30.3 µg/m^3), the highest period average (8.2 µg/m^3) and had the only exceedance of the 24-hour average criterion. Location 398 (AQ_CN) experienced the lowest values for both PM_{10} and $PM_{2.5}$ of the three sites.

The monitoring has been conducted for five months and for indicative purposes the period average from June to November has been compared to annual average criteria of 25 µg/m^3 and 8 µg/m^3 for PM_{10} and $PM_{2.5}$, respectively. There are exceedances of the annual average PM_{10} criteria at location 397 (AQ_CS) and location 399 (AQ_S2). There are exceedances of the annual average $PM_{2.5}$ criteria at location 397 (AQ_CS).

At monitoring location 397 (AQ_CS), there was either no data or insufficient data capture (due to solar power cuts) during the following dates:

- 8 July 2021;
- 2 September 2021 through to 20 October 2021; and
- 22 October 2021.

At monitoring location 398 (AQ_CN), there was no data collected on 24th June but this was the day of installation. All other dates have sufficient data capture.

At monitoring location 399 (AQ_S2), there was either no data or insufficient data capture (due to solar power cuts and battery issues) during the following dates:

- 11 October 2021 through to 20 October 2021; and
- 30 October 2021 through to 21 November 2021.

In addition, at this location there were 16 consecutive days from 16 August to 31 August where PM_{10} concentrations were 0.3 µg/m^3 or less and $PM_{2.5}$ concentrations were 0 µg/m^3. This data provided has been validated but it is worth noting.

Figure 5.1 to Figure 5.3 present the daily average PM_{10} and $PM_{2.5}$ concentrations at locations 397 (AQ_CS), 398 (AQ_CN) and 399 (AQ_S2) for the entire monitoring period.

Table 5.1: Summary of PM_{10} and $PM_{2.5}$ concentrations – June/July 2021

Parameter	Location			Units
	AQ_CS	AQ_CN	AQ_S2	
PM_{10}				
Maximum 24 hour average	85.8	14.9	282.3	µg/m³
Monthly average	27.5	9.1	100.2	
Exceedances of 24 hour criterion	5	0	25	-
$PM_{2.5}$

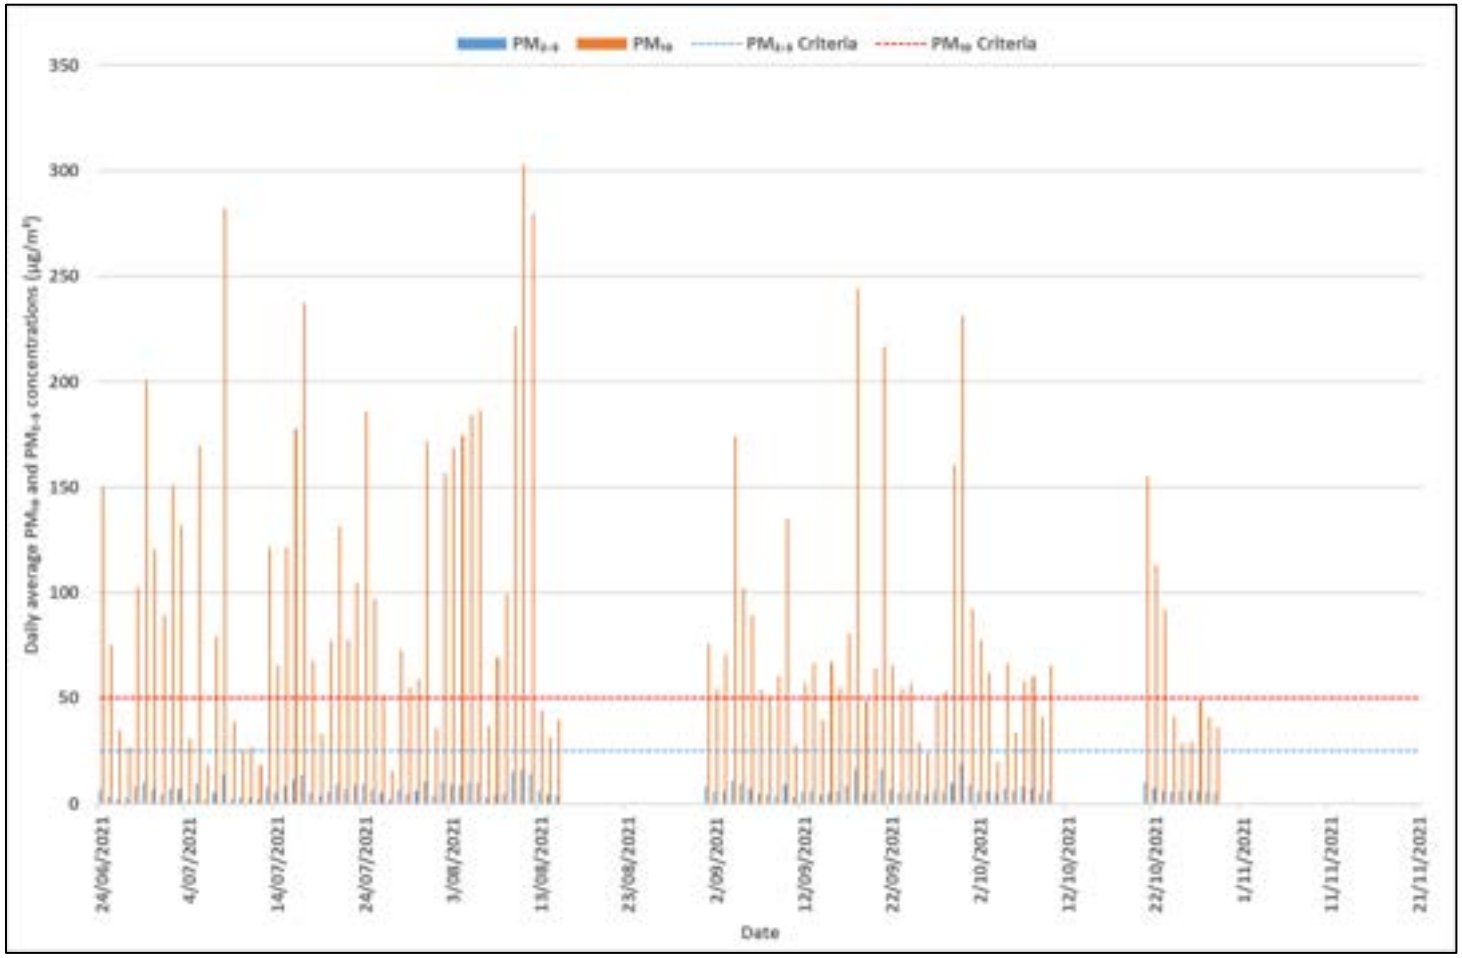

Figure 5.3: Daily average PM_{10} and $PM_{2.5}$ concentrations at location 399 (AQ_S2) from June 2021 to November 2021

5.2 Deposited dust

Table 5.7 presents the dust deposition results at the three monitoring locations. The six-month average of the total insoluble solids results is compared against the annual average criteria of 4 g/m^2/month. There are two exceedances of the adopted criteria for the period October/November, both in the location AQ_CS. Those exceedances are 19.9 g/m^2/month of ash content and 21.5 g/m^2/month of total insoluble matter. During October, it is noted that there was a significant fire around the three monitoring locations (NAFI, 2022).

In June/July and July/August, the lower PM concentrations seen in the continuous monitoring at AQ_CN is reflected in the dust deposition results.

Table 5.7: Summary of dust deposition results

Period	AQ_CS			AQ_CN			AQ_S2		
	Ash Content	Comb. Matter	Total Insoluble Matter	Ash Content	Comb. Matter	Total Insoluble Matter	Ash Content	Comb. Matter	Total Insoluble Matter

5.3 VOCs

Table 5.8 provides a summary of reported concentrations for VOCs at three monitoring locations AQ_CS, AQ_CN and AQ_S2. There are no positive detections from any of the samples. Table 5.9 provides comparison of these results to the screening criteria identified in Section 4.3.4. All samples are significantly lower than respective adopted screening criteria.

Table 5.8: Summary of reported VOC concentrations – June to November 2021

Month	Reported Concentration (All locations) - µg/m³			
	Benzene	Toluene	Ethylbenzene	Xylenes
June	<1.6	<1.9	<2.2	<6.5
July	<1.6	<1.9	<2.2	<6.5
August	<1.6	<1.9	<2.2	<6.5
September	<1.6	<1.9	<2.2	<6.5
October	<1.6	<1.9	<2.2	<6.5
November	<1.6	<1.9	<2.2	<6.5

Note - "<": Less than Limit of Reporting (LOR).

Table 5.9: Screening reported VOC concentrations – June to November 2021

VOC	Statistic	Maximum Result	Screening Criteria (µg/m³)	Source
Benzene	Maximum 24 hour average	<1.6	29	ATSDR (2017)
	Average	<1.6	9.6*	NEPC (2011)
Toluene	Maximum 24 hour average	<1.9	3,770	NEPC (2011)
	Average	<1.9	377*	
Ethylbenzene	Maximum 24 hour average	<2.2	21,700	ATSDR (2017)
	Average	<2.2	260*	
Xylenes	Maximum 24 hour average	<6.5	1,085	NEPC (2011)

Notes - "<": Less than Limit of Reporting (LOR). *Average of 6 monthly samples compared to annual criterion for contextual purposes.

5.4 Methane

Table 5.10 provides a summary of reported concentrations for methane at the three monitoring locations. There are no positive detections from any of the samples.

Table 5.10: Summary of methane monitoring results

Month	Reported Methane Concentration - mg/m³		
	AQ_S1	AQ_S2	AQ_S3
June	<6.6	<6.6	<6.6
July	<6.6	<6.6	<6.6
August	<6.6	<6.6	<6.6
September	<6.6	<6.6	<6.6
October	<6.6	<6.6	<6.6
November	<6.6	<6.6	<6.6

Notes - "<": Less than Limit of Reporting (LOR).

6. CONCLUSIONS

BNR has conducted ambient air quality monitoring of particulate matter, deposited dust, VOCs and methane at multiple locations in the vicinity of the proposed Valhalla Gas Exploration and Appraisal Program during June 2021 to November 2021.

The monitoring has been primarily undertaken during the dry season which typically lasts from May to October. For the purposes of contextualising the results of this monitoring, annual criteria have been adopted as proxy criteria for comparison against the six-month averages. Noting that particulate matter from both wind erosion and vehicle transit on unsealed roads, and VOCs from bushfire activity are less prevalent with increased moisture in the environment, the approach of evaluating six months of dry season data against annual averages is considered conservative.

Table 6.1 presents a summary of the monitoring results for AQ_CS, AQ_CN and AQ_S2, with comparison against respective criteria.

Table 6.1: Summary of Air Quality Monitoring Results (µg/m³)

Month	Monitoring Statistic	Monitoring Location			Criterion*
		AQ_CS	AQ_CN	AQ_S2	
PM_{10}	Peak 24 hour average	134.4	82.0	303.0	50
	6 monthly average	38.3	14.7	80.1	25*
$PM_{2.5}$	Peak 24 hour average	30.3	15.0	19.0	25
	6 monthly average	8.2	4.3	6.0	8*
Deposited Dust	6 monthly average	6.2	1.1	1.6	4*
Benzene	Maximum 24 hour average	<1.6	<1.6	<1.6	29
	6 monthly average	<1.6	<1.6	<1.6	9.6*
Toluene	Maximum 24 hour average	<1.9	<1.9	<1.9	3,770
	6 monthly average	<1.9	<1.9	<1.9	377*
Ethylbenzene	Maximum 24 hour average	<2.2	<2.2	<2.2	21,700
	6 monthly average	<2.2	<2.2	<2.2	260*
Xylenes	Maximum 24 hour average	<6.5	<6.5	<6.5	1,085
	6 monthly average	<6.5	<6.5	<6.5	868*

Note: *Annual average criteria (marked by an asterisk) have been adopted as proxy criteria for comparison against the six-month averages

For $PM_{10,}$ AQ_S2 reported the highest maximum 24-hour average concentration (303 µg/m^3), the highest period average (80.1 µg/m^3) and the most exceedances of the 24-hour average criterion at 96 events. For $PM_{2.5}$, AQ_CS has the highest maximum 24-hour average concentration (30.3 µg/m^3), the highest period average (8.2 µg/m^3) and had the only exceedance of the 24-hour average criterion. AQ_CN experienced the lowest PM_{10} and $PM_{2.5}$ concentrations of the three sites.

For contextual purposes, the six-month average monitoring results have been compared to annual average criteria of 25 µg/m^3 and 8 µg/m^3 for PM_{10} and $PM_{2.5}$, respectively. Average PM_{10} concentrations were higher than the annual average PM_{10} criterion at location AQ_CS and location AQ_S2, with the magnitude of measurements at AQ_CS indicating an exceedance of the annual average criterion irrespective of concentrations present during the wet season.

The average $PM_{2.5}$ concentration was higher than the annual average $PM_{2.5}$ criterion at location AQ_CS. Given that particulate matter concentrations are anticipated to be lower during the wet season, this result is not necessarily indicative of an exceedance of the annual average criterion.

The monitoring results for the deposited dust showed variable dust deposition rates, with the highest results located at AQ_CS, for which the six monthly average was greater than the annual average criterion. Given that deposition rates are anticipated to be lower during the wet season, this result is not necessarily indicative of an exceedance of the annual average deposition criterion.

The results of the VOC monitoring have been screened against Australian and US criteria that are nominated for use in the evaluation of ambient monitoring data, for identification of whether additional investigation is required. There were no positive detections present for any VOCs, and all results were significantly lower than respective screening criteria.

Methane monitoring results were less than the limit of reporting of 6.6 mg for locations AQ_S1, AQ_S2 and AQ_S3. Noting that this monitoring is not aligned with ambient air quality outcomes, these data have not been screened against any criterion.

7. STATEMENT OF LIMITATIONS

1. This report is based solely on the scope of work described in proposal 'P0594916var1 Air Quality Monitoring Support Valhalla rev1.pdf' performed by Environmental Resources Management Australia Pacific Pty Ltd (**ERM**) for Bennett Resources (the **Client**). The Scope of Work was governed by a contract between ERM and the Client (**Contract**).

2. No limitation, qualification or caveat set out below is intended to derogate from the rights and obligations of ERM and the Client under the Contract.

3. The findings of this report are solely based on, and the information provided in this report is strictly limited to that required by, the Scope of Work. Except to the extent stated otherwise, in preparing this report ERM has not considered any question, nor provides any information, beyond that required by the Scope of Work.

4. This report was prepared between September 2021 and March 2022 and is based on conditions encountered and information reviewed at the time of preparation. The report does not, and cannot, take into account changes in law, factual circumstances, applicable regulatory instruments or any other future matter. ERM does not, and will not, provide any on-going advice on the impact of any future matters unless it has agreed with the Client to amend the Scope of Work or has entered into a new engagement to provide a further report.

5. This report is based on analyses described in the report, and information provided by the Client or third parties (including regulatory agencies). All conclusions and recommendations made in the report are the professional opinions of the ERM personnel involved. Whilst normal checking of data accuracy was undertaken, except to the extent expressly set out in this report ERM:

    a. did not, nor was able to, make further enquiries to assess the reliability of the information or independently verify information provided by;

    b. assumes no responsibility or liability for errors in data obtained from, the Client, any third parties or external sources (including regulatory agencies).

6. Although the data that has been used in compiling this report is generally based on actual circumstances, if the report refers to hypothetical examples those examples may, or may not, represent actual existing circumstances.

7. Only the environmental conditions and or potential contaminants specifically referred to in this report have been considered. To the extent permitted by law and except as is specifically stated in this report, ERM makes no warranty or representation about:

    a. the suitability of the site(s) for any purpose or the permissibility of any use;

    b. the presence, absence or otherwise of any environmental conditions or contaminants at the site(s) or elsewhere; or

    c. the presence, absence or otherwise of asbestos, asbestos containing materials or any hazardous materials on the site(s).

8. Use of the site for any purpose may require planning and other approvals and, in some cases, environmental regulator and accredited site auditor approvals. ERM offers no opinion as to the likelihood of obtaining any such approvals, or the conditions and obligations which such approvals may impose, which may include the requirement for additional environment works.

9. The ongoing use of the site or use of the site for a different purpose may require the management of or remediation of site conditions, such as contamination and other conditions, including but not limited to conditions referred to in this report.

10. This report should be read in full and no excerpts are to be taken as representative of the whole report. To ensure its contextual integrity, the report is not to be copied, distributed or referred to in part only. No responsibility or liability is accepted by ERM for use of any part of this report in any other context.

11. Except to the extent that ERM has agreed otherwise with the Client in the Scope of Work or the Contract, this report:

    a. has been prepared and is intended only for the exclusive use of the Client and the appointed contaminated land auditor;

    b. must not to be relied upon or used by any other party;

    c. has not been prepared nor is intended for the purpose of advertising, sales, promoting or endorsing any Client interests including raising investment capital, recommending investment decisions, or other publicity purposes;

    d. does not purport to recommend or induce a decision to make (or not make) any purchase, disposal, investment, divestment, financial commitment or otherwise in or in relation to the site(s); and

    e. does not purport to provide, nor should be construed as, legal advice.

COMMENTS/SPECIAL HANDLING/REPLACEMENT OR RETURN INSTRUCTIONS:

GAS SAMPLE CONTAINER INFORMATION

Canister Gauge Pressures (PSI) — Refer to Canister Verification Reports and COAs for pressures measured by the Lab

ANALYSES REQUESTED — Reporting Requirements — Suite Codes must be listed to attract suite price

Additional Information — Comments on LORs required, potential hazards, likely contaminant levels, or samples requiring specific QC analysis etc. (LOR defaults to routine method LOR after dilution)

ALS USE ONLY	CANISTER / SAMPLE DETAILS					Pre-Sampling	Post Sampling	LORs: Ambient Air	LORs: Soil Gas (NEPM)	LORs: Other / Indoor	Units: ppbv, µg/m³	Units: ppmv, mg/m³	EP101-BTEXN (USEPA TO15)	EP104L-M (in house, ASTM D1945)

No. of samples analysed	: 5		

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP101-H: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP101-H: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP101: Results reported in µg/m³ are calculated from PPBV results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa.
- CAN-001: Results for Pressure - As Received are measured under controlled conditions using calibrated laboratory gauges. These results are expressed as an Absolute Pressure. Equivalent gauge pressures may be calculated by subtracting the Pressure - Laboratory Atmosphere taken at the time of measurement.
- CAN-001: Results for Pressure - Gauge as Received are obtained from uncalibrated field gauges and are indicative only. These results may not precisely match calibrated gauge readings and may vary from field measurements due to changes in temperature and pressure

^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP101, EP104: Particular samples were received outside of recommended ALS holding times for the analysis of BTEXN and low-level methane. Results should be scrutinised accordingly.
- EP104: Results reported in mg/m³ are calculated from Mol% results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa
- EP101-H: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP101-H: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP104: Sample canisters were received at sub-ambient pressures and required dilution in the laboratory prior to analysis. LOR values have been adjusted accordingly.
- EP101: Results reported in µg/m³ are calculated from PPBV results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa.
- CAN-001: Results for Pressure - As Received are measured under controlled conditions using calibrated laboratory gauges. These results are expressed as an Absolute Pressure. Equivalent gauge pressures may be calculated by subtracting the Pressure - Laboratory Atmosphere taken at the time of measurement.
- CAN-001: Results for Pressure - Gauge as Received are obtained from uncalibrated field gauges and are indicative only. These results may not precisely match calibrated gauge readings and may vary from field measurements due to changes in temperature and pressure

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Zoran Grozdanovski	Laboratory Operator	Newcastle - Inorganics, Mayfield West, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Analysis as per AS3580.10.1-2016. Samples passed through a 1mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m².mth as sampling data was provided by the client.

Rev1	PHW	NE	28/9/16

1. INTRODUCTION

Buru Energy (Buru) is planning the drilling of an additional exploration well at Valhalla Central, located between the Valhalla and Asgard wells in the Canning Basin. Water will be needed for drilling and well construction, hydraulic fracturing, and the operation of camp sites. Approximately 10,000 kL, and possibly up to 34,000 kL of water are required.

Buru's existing prospects are in the Fitzroy Trough of the northern Canning Basin. They include Yulleroo, about 80 km east of Broome; Ungani, about 100 km east of Broome and 90 km south-west of Derby; Blina, 105 km east-south-east of Derby; Sundown 26 km north-west of Blina; and Paradise, Valhalla and Asgard, 150 km south-east of Derby (Fig. 1).

Rockwater was engaged to prepare this assessment of the hydrogeology of the Paradise–Valhalla–Asgard area, which includes Valhalla Central; and the results of monitoring during fracturing of reservoirs at Valhalla North and Asgard. It is an update of a report that has been prepared since 2013, and will be progressively updated as new projects are planned and additional data are collected.

Technical terms used in this report are described in Appendix I.

1.1 CLIMATE

The area has a tropical climate with hot wet summers and warm dry winters. Average rainfalls at Roebuck Plains (BoM Stn. 003023, 1902 to 2010), located 47 km west-south-west of Yulleroo 1; and at Ellendale (BoM Stn. 003008, 1919 to 2013) located 16 km north of Valhalla 1; are given in Table 1.

Table 1: Average Rainfalls (mm) at Roebuck Plains and Ellendale

Station	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
Roebuck Plains	186.2	162.9	105.3	29.9	17.0	17.5	4.2	1.7	1.8	2.7	14.4	88.1	637.7
Ellendale	170.6	155.7	106.1	16.7	12.0	5.5	4.8	0.7	2.0	9.3	26.7	91.6	614.8

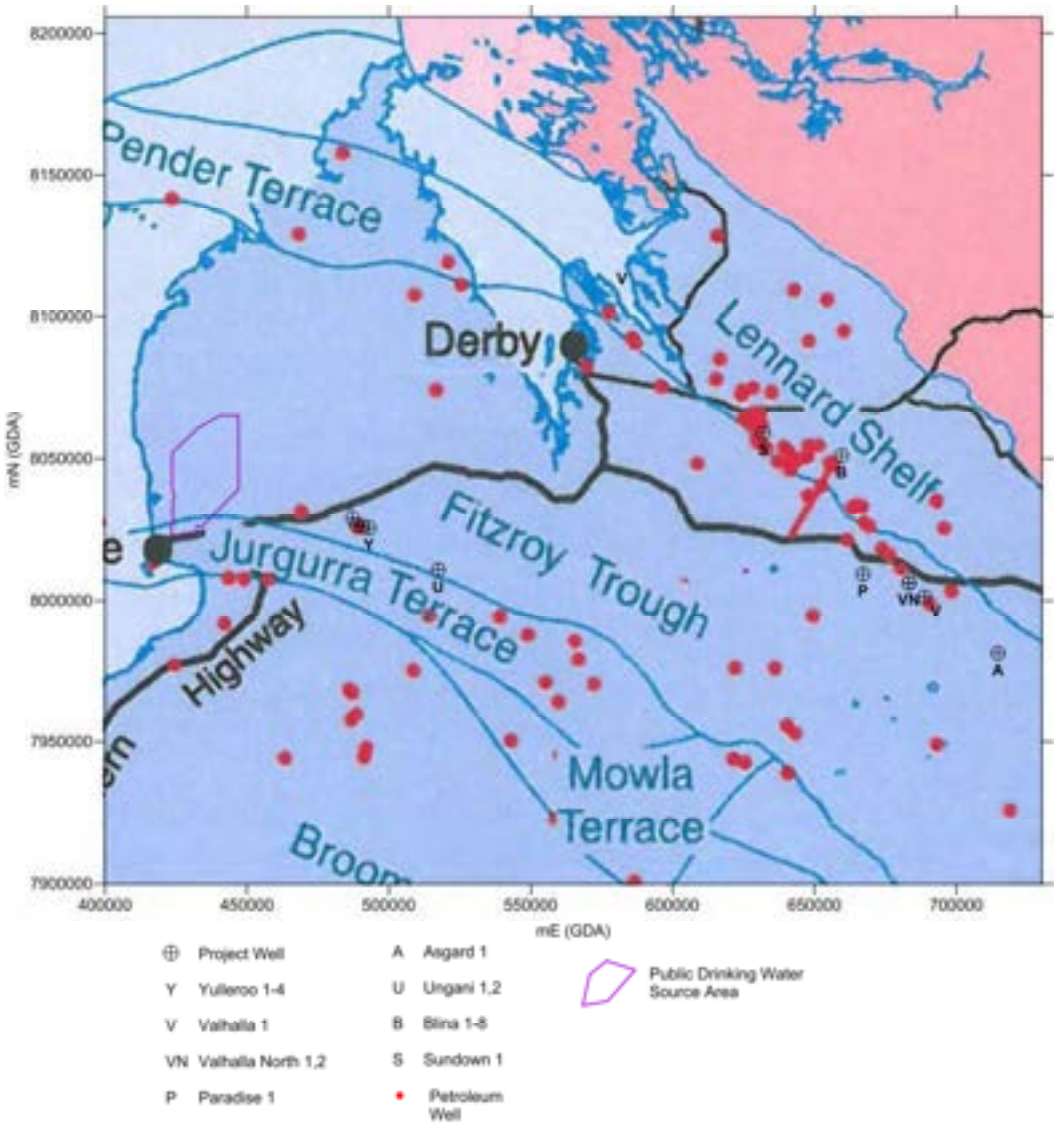
The monthly averages at both sites are remarkably similar, and indicate that about 85 % of the rain falls from December to March. Annual rainfalls do, however vary considerably, and at Ellendale have ranged from 212 mm to 1,409 mm.

Average dam evaporation at Camballin (Luke, Burke and O'Brien, 1988), located about 63 km west of Valhalla 1, is given in Table 2. It exceeds average rainfall in all months and average annual rainfall by a factor of four.

Table 2: Average Dam Evaporation (mm) at Camballin

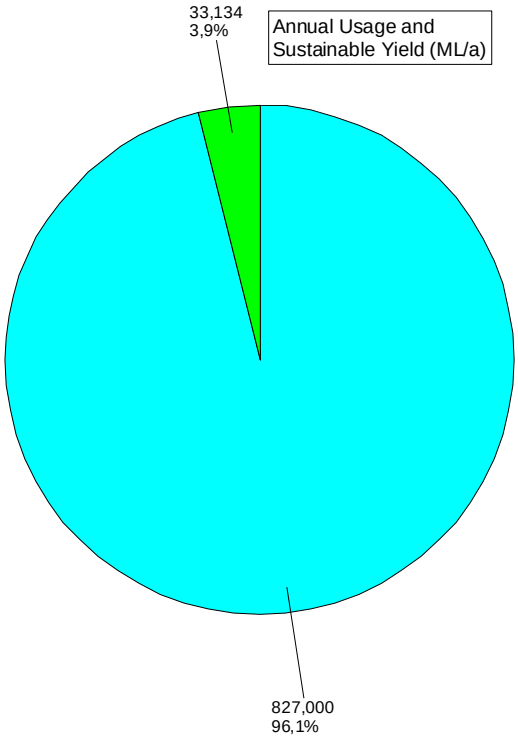
Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
229	184	189	203	184	168	187	214	262	281	291	287	2,679

Figure 1: Wellfield Locations



2. HYDROGEOLOGICAL SETTING, CANNING BASIN

The Canning Basin is the second largest groundwater resource (by volume) in Australia (after the Great Artesian Basin) but there have been few studies carried out of the regional hydrogeology. Estimates of sustainable yield from the basin are about 615,000 ML/yr (WRC, 2001) and 827,000 ML/yr (ANRA, 2010). Of that, only 33,134 ML/a (less than four percent) were being consumed:



The sustainable yield is similar to that of the Lower Limestone Coast in South Australia (756,250 ML/yr) (NWC, 2005). As a comparison, the baseline groundwater allocation for the Integrated Water Supply Scheme that supplies water to Perth and some regional areas is 145,000 ML/yr; and the Water Corporation had planned to supplement the water supply with 45,000 ML/yr from the South-West Yarragadee in the southern Perth Basin where annual recharge was estimated to be about 350,000 ML/yr.

The geology of the basin has been well defined and described in publications such as Veevers and Wells (1961), Towner and Gibson (1983), and Middleton (1990).

Most of the demand for groundwater from the basin has been near Broome and Derby; and recently the western part of the basin has been investigated as a major source of water for Port Hedland.

Laws (1991a) prepared a hydrogeological map and explanatory notes for the Broome 1:250,000 sheet, and Smith (1992) completed the hydrogeological map and explanatory notes for the adjoining Derby 1:250,000 sheet. Laws (1991b) also presented a report on the groundwater resources of the wider basin at an international groundwater conference in Perth.

Ghassemi, Ferguson and Etminan (1991) used oil well data to describe the hydrogeology of deep (Permian and older) aquifers of the basin.

Harrington et al. (2011) investigated groundwater/surface water interactions in the Fitzroy River south and south-east of the Paradise – Valhalla area.

Searle (2012) produced a groundwater resource review for the Dampier Peninsula – the first regional review of the groundwater resources in part of the basin. Groundwater use on the Peninsula is concentrated on the Broome aquifer, with only minor development of the Superficial, Wallal and Liveringa aquifers. The Grant aquifer is undeveloped.

The DoW (2012) produced a West Canning Basin groundwater allocation limit report giving information on the hydrogeology of the area to be developed for the Port Hedland water supply.

The Buru wellfields lie within the Fitzroy Trough (Fig. 1), a major subdivision of the Canning Basin. The trough (Reeves, 1951) is a north-west trending graben bounded on its north-eastern side by the Beagle Bay Fault and on its south-western side by the Fenton Fault system. It is generally about 110 km wide and contains 10,000 m or more of Ordovician to Cretaceous sediments (mostly Devonian to Permian), with common folding and faulting of the Triassic and older rocks sub-parallel to the alignment of the trough.

The wellfields are remote from the Broome Public Drinking Water Source Area (PDWSA) shown in Fig. 1. There is another very small PDWSA at Camballin, 37 km west of Paradise 1, and several small circular PDWSA's south-east of Derby around individual production bores.

3. PARADISE-VALHALLA-ASGARD AREA

3.1 GEOLOGICAL SETTING

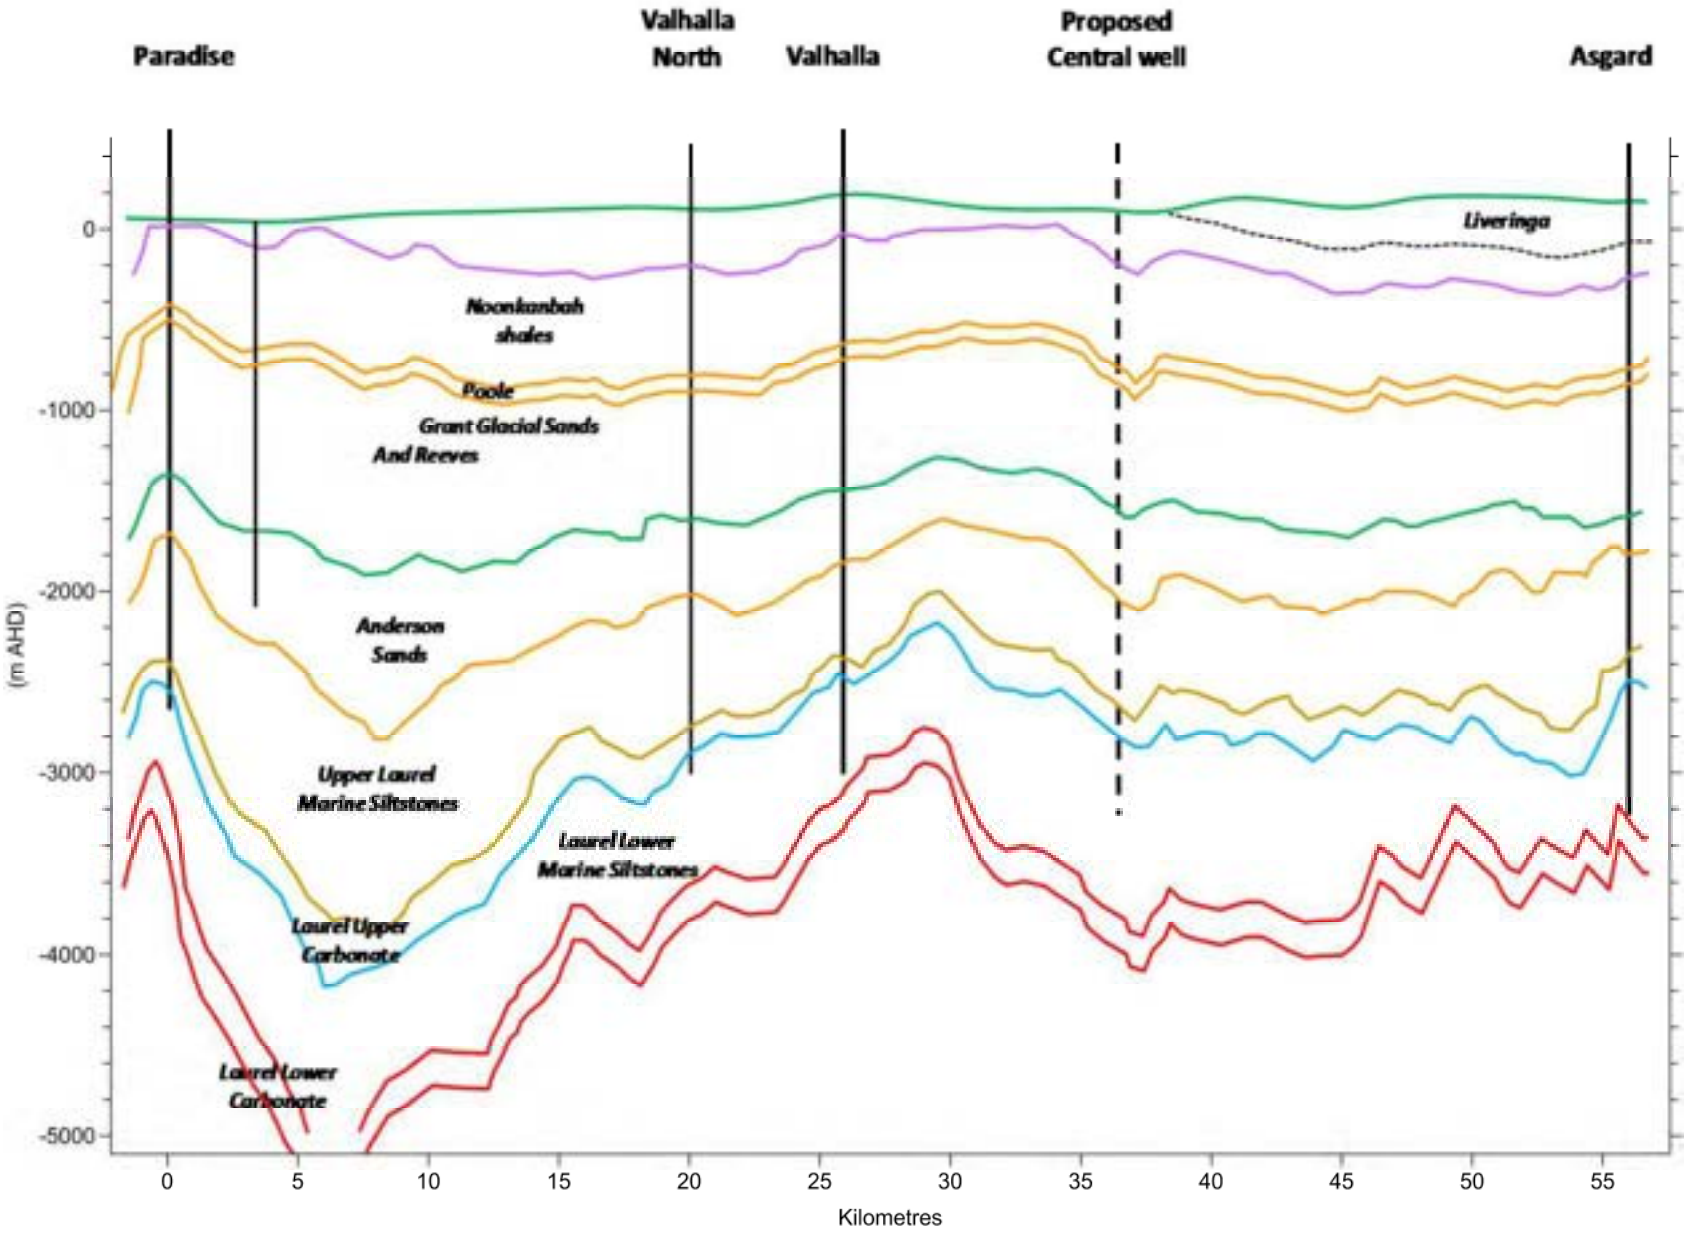
The hydrocarbon targets in this area are in the Laurel Formation, which is overlain by the Anderson and Reeves Formations of Carboniferous age; and the Grant Formation, Poole Sandstone, and Noonkanbah and Liveringa Formations of Carboniferous to Permian age. The formation boundaries of the Permian to Carboniferous sediments are at relatively consistent elevations, indicating only minor folding and faulting. The stratigraphy is summarised in Table 3.

Table 3: Stratigraphy and Aquifers in Paradise-Valhalla-Asgard Area

Formation	Dominant Lithology	Classification		Base Elevation (m AHD)			TDS (mg/L)
			Paradise 1	Valhalla 1	Valhalla Central	Asgard 1	
		Ground Level:	63.9	110		130	
Liveringa	Siltstone/shale/sandstone	Minor aquifer, Aquitard	NA	-84		-171	500 to 12,400
Noonkanbah	Shale	Aquiclude	-321	-441		-579	550 to 800
Poole Sandstone	Sandstone and Shale	Aquifer or Aquitard	-412	-524		-695	300
Grant	Sandstone	Aquifer	-1211	-1332		-1240	800-1000*
Reeves	Sandstone	Aquifer	-1309	-1588		-1606	
Anderson	sandstone, siltstone, shale	Minor aquifer, Aquitard	-1898	-1858		-1790	70,000 to 100,000?
Laurel	Limestone, shale, siltstone & sandstone	Minor aquifer, Aquitard	-3330?	<-3350		<-3,400	70,000 to 100,000?
* Estimate from Resistivity Logs							

A geological section through the area is shown in Figure 2.

Figure 2: Geological Section, Paradise-Valhalla-Asgard Area



3.2 HYDROGEOLOGY

The main aquifers are the Poole Sandstone and Grant Formation (Table 3). The Reeves Formation is also an aquifer that is generally considered as part of the Grant aquifer.

The Poole Sandstone is generally an aquifer, although the geophysical logs for Paradise 1, Valhalla North 1, and Asgard 1 indicate there is interbedded shale and sandstone in the formation in those wells, whereas sandstone dominates the Poole Sandstone in Valhalla 1. The Poole Sandstone is mainly fine grained with some medium to coarse sandstone towards the base.

The Grant Formation is much thicker than the Poole Sandstone and so a more substantial aquifer. It consists of three units (youngest to oldest): fine, and medium to coarse sandstone of the Carolyn unit; siltstone of the Winifred unit; and fine to coarse sandstone of the Betty unit (Ghassemi et al., 1991). The yield of the one WIR bore screened in the Grant Formation (Palm Spring No.1) was reported to be 655 kL/d. There are higher yields from the Formation of up to 2,400 kL/d at Ellendale. The Grant Formation forms a substantial aquifer – bore yields commonly depend on the quantity of water required and the thickness of sandstone screened. The aquifer is described in more detail in Section 4, below.

The Anderson and Laurel Formations are considered to be aquitards. The sandstone and limestone of these formations generally have low permeability but can be minor aquifers.

The Liveringa Formation forms a minor aquifer, as fine-grained sediments (siltstone and shale) dominate, and sandstone beds are less common. Bore yields given in the WIR database are generally low, and those recorded for the Liveringa and Noonkanbah Formations are all less than 100 kL/d. Drillers logs for the water bores at Valhalla, Valhalla North and Asgard 1 sites indicate the bores are screened in shale and/or siltstone with minor sandstone of the Liveringa Formation, and generally yield about 100 kL/d (maximum 200 kL/d in one bore at Asgard 1).

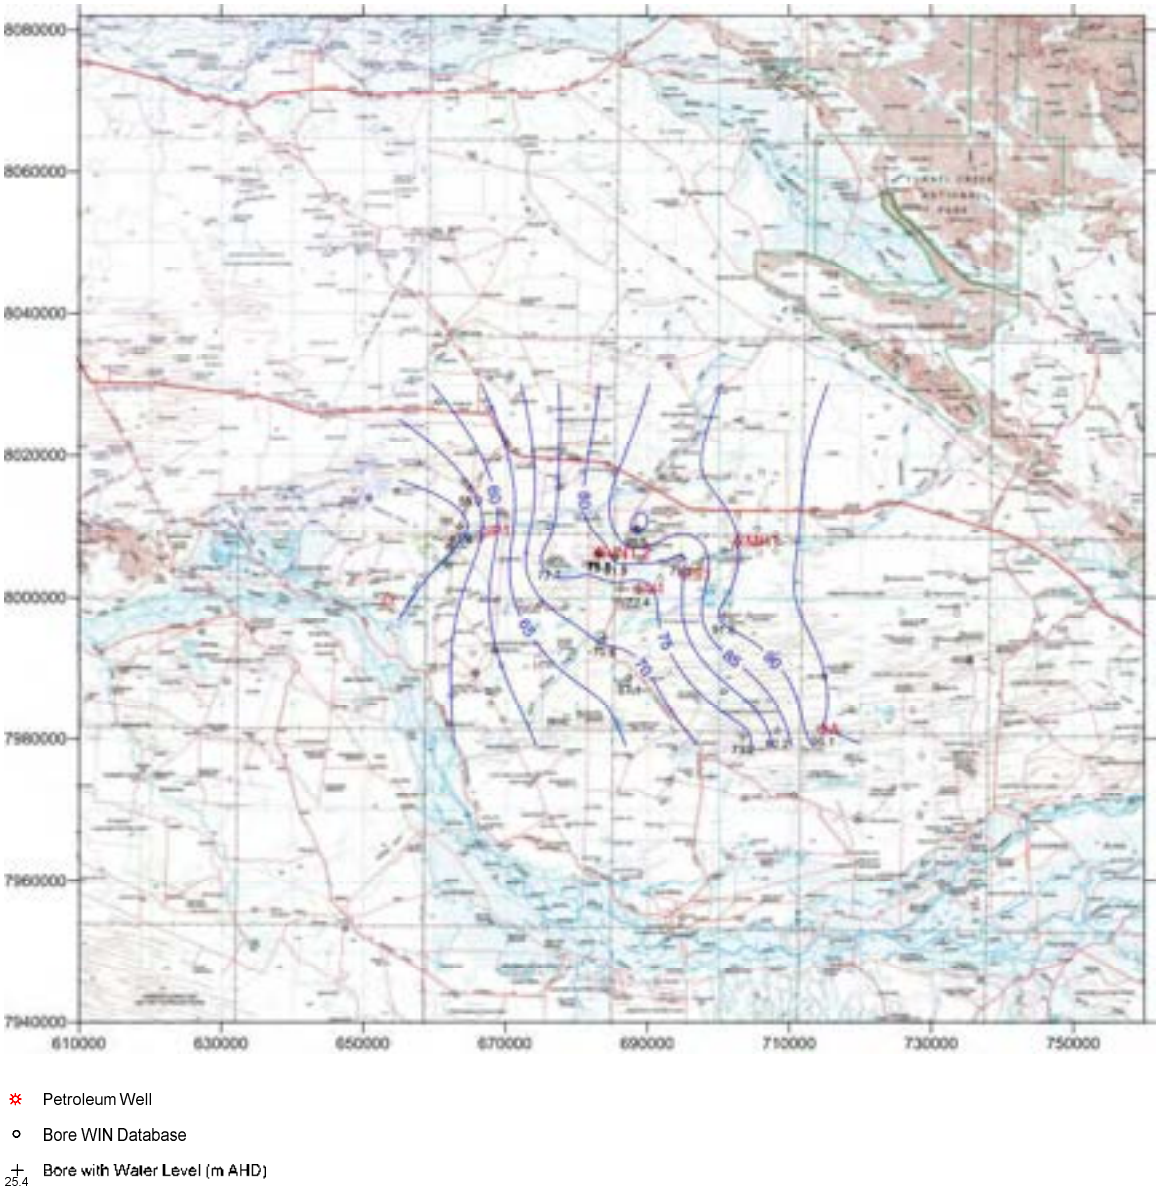
There are also some bores screened in the Noonkanbah Formation, which consists mainly of fine-grained sediments but does have some limestone and fine to medium grained sandstone interbeds. Those bores (in the Noonkanbah Formation) are mostly near and to the north of the Valhalla and Valhalla North wells. Two bores near Paradise 1 are reported to be in the Poole Sandstone, as are several others east of Mount Hardman. Some bores in the Asgard area, south-east of Valhalla are screened in the Blina Shale and others in the underlying Liveringa Formation.

3.2.1 Groundwater Levels

Groundwater levels measured in bores by Buru environmental staff, and in bores recorded in the WIR database (reduced to m AHD using approximate elevations given by Elevation Finder) have been used to construct the water level contour plan shown in Figure 3. They indicate that there is a westerly groundwater flow with some groundwater discharge to the Fitzroy River.

Recorded water table depths are 30 m (Valhalla North) and 36 m (Valhalla 1), and are likely to be similar at Valhalla Central.

Figure 3: Groundwater Levels (m AHD) Valhalla Area, Oct. 2012



3.2.2 Aquifer Parameters

Core data analysed and presented by Buru Energy indicate that permeabilities and porosities of all potential hydrocarbon reservoirs are highly variable, but in general:

- Most Grant Formation permeabilities range from 100 to 5000 milli-Darcys (mD) (0.08 to 4 m/d) and porosities 15 to 25 percent. Some higher permeabilities (8 to 20 m/d) have been measured by test-pumping at Ellendale where the formation crops out.
- Anderson Formation permeabilities range from 10 to 500 mD (0.008 to 0.4 m/d) and porosities 10 to 20 percent; and
- Laurel Formation permeabilities are mostly less than 1 mD (0.0008 m/d) and porosities less than 10 percent.

Ghassemi et al. (1991) also analysed data from cores and gave a permeability of 0.075 m/d and porosity 14 percent for the Poole Sandstone; and permeability of 0.10 m/d and porosity 11 percent for the Grant Formation.

There are no data for the minor aquifers/aquitards/aquicludes – the Blina Shale, and the Liveringa and Noonkanbah Formations.

3.2.3 Recharge, Flow Directions and Discharge

Groundwater in the shallow formations is recharged by the infiltration of rainfall. Recharge rates are probably low due to the predominance of fine-grained sediments near ground surface.

Groundwater in the surficial Blina Shale, and Liveringa and Noonkanbah Formations will be recharged from local infiltration of rainfall where they outcrop, or by downward movement from one formation to the other where they are layered. The infiltration will be retarded by clay, shale and siltstone layers, both above and below the water table. The water table depth ranges from 7 m at Paradise 1 water bore to 30 m at Valhalla 1 and Valhalla North water bores. Water is likely to take between 70 and 300 days to travel from the ground surface to the water table.

Outcrop and potential recharge areas for the Poole Sandstone and Grant Formation are generally small, such as in the Saint George Ranges to the south. Much of the recharge is probably by downward leakage from overlying formations and rainfall runoff from the Devonian Limestone of the Oscar Range to the east.

The water level contours (Fig. 3) indicate that groundwater in the Liveringa and Noonkanbah Formations generally flows westwards, and this is also expected to be the

case for the deeper aquifers. There are also indications from the shape of contours which tend to be parallel to the Fitzroy River, that there is a southerly component to the flow with some flow towards, and discharge to the Fitzroy River from the shallow formations.

Harrington et al. (2011) found there was a strong connection between groundwater and the Fitzroy River south and south-east of the Valhalla area, with a calculated groundwater discharge of 102 ML/d over a 100 km reach of the river.

Assuming a hydraulic conductivity of 1 m/d for permeable beds within the Liveringa and Noonkanbah Formations, a specific yield of 0.1 and hydraulic gradients of about 0.00185 at Paradise 1 and 0.00058 at Valhalla 1; groundwater would take about 465 years to reach the closest receptor, Robbins Bore 3.14 km to the west, and about 3,600 years to move from Paradise 1 to the river. Similarly, the groundwater would take about 105 years to move from Valhalla 1 to Halfway Bore, 224 m to the south-west, and 16,000 years to move from Valhalla 1 to the river. The current status of those two station bores is not known.

Detail of groundwater-level contours near Valhalla Central and the direction of groundwater flow are shown in Fig. 4.

Figure 4: Groundwater Level Contours (m AHD) Near Valhalla Central

With a hydraulic gradient of about 0.0017 at Valhalla Central; groundwater would take at least 4,500 years to reach any waterhole in Hardman Creek, and about 7,300 years to move from Valhalla Central to the Fitzroy River.

Flow in the deeper formations probably continues to the west beneath the river. The flow velocities will be very low due to the low permeabilities – at least 150 times lower than in the shallow formations.

3.2.4 Water Quality

Salinities, where recorded in the WIR database and by Buru Energy, are generally less than 1,000 mg/L TDS in the Liveringa Formation, but range from 500 to 12,400 mg/L TDS. Salinities for Buru water bores in the Liveringa Formation range from 450 to 1,600 mg/L TDS. Those for bores screened in the Noonkanbah Formation generally range from 550 to 800 mg/L TDS, but are up to 2,300 mg/L TDS. The three salinities available for the Poole Sandstone range from 200 to 325 mg/L TDS. The one bore recorded that is screened in the Grant Formation had a salinity of 860 mg/L TDS.

Crowe and Towner (1981) reported salinity measurements made in 138 station bores and wells during mapping of the Noonkanbah geological sheet, and related them to the formations screened. Those for bores/wells on stations in the Paradise-Valhalla-Asgard area had the following salinity ranges recorded:

- Blina Shale; 10,000 to >15,000 mg/L TDS;
- Liveringa (Hardman) Formation; 220 to 3,900 mg/L TDS (average 1,600);
- Noonkanbah Formation; 340 to 7,000 mg/L TDS (average 2,500);
- Poole Sandstone; 200 to 900 mg/L TDS (average 420); and
- Grant Formation; 200 mg/L TDS (one bore).

Water samples have been taken from 10 bores in the Valhalla-Paradise-Asgard area on a number of occasions as part of baseline water quality sampling by Buru, and analysed by ChemCentre or SGS for a wide range of parameters. The results are included on the Buru website: http://www.buruenergy.com/2015-tight-gas-pilot-exploration-program/

The water samples were generally brackish to saline, with salinities ranging from 560 mg/L TDS (Homestead 1) to 22,000 mg/L TDS (Crossland Bore). With the elevated salinities, most samples exceeded Australian drinking water guidelines for salinity, sodium, chloride, sulphate and hardness. Also, boron, iron and manganese guideline values were exceeded in many of the samples.

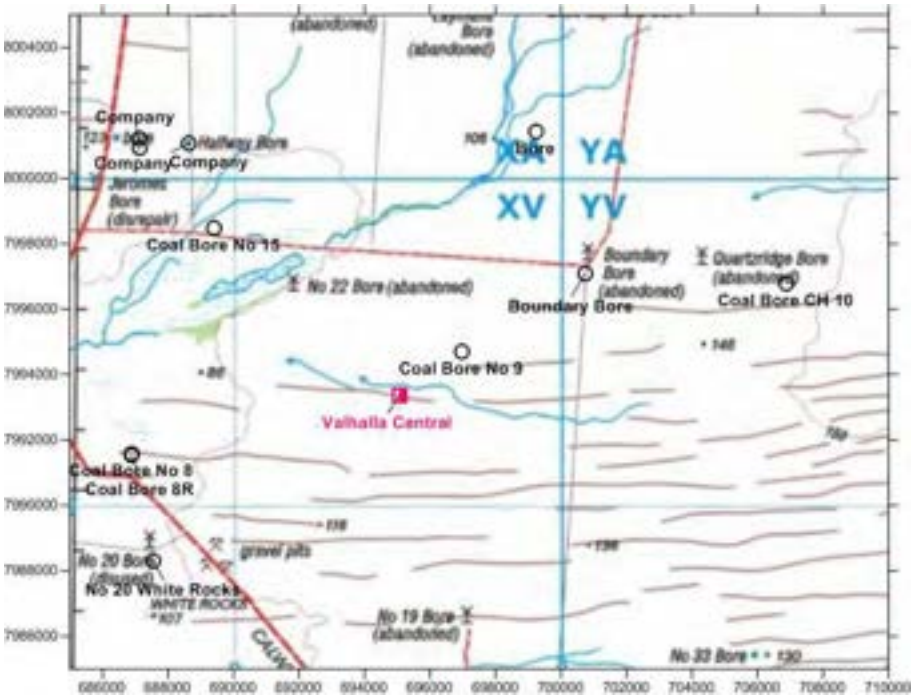
The elevated sulphate concentrations (96 to 752 mg/L) were similar to the chloride levels, which is unusual.

Field measurements of physico-chemical parameters are also being made on 10 bores in the area to provide background data. These results are also given in the Buru website.

3.3 IMPACT OF SITE ACTIVITIES, VALHALLA CENTRAL

Bores recorded in the WIR database within about 10 km of the Valhalla Central site are shown in Fig. 5. There are few details for these bores, but most appear to be coal exploration holes/bores that extended through the Liveringa Formation into the underlying Noonkanbah Formation and have probably been abandoned. Most or all of the station bores have also been abandoned, including Boundary Bore, the closest to the Valhalla Central site.

Figure 5: WIR Bores near Valhalla Central



It is very unlikely that there are any operating bores or wells that could be impacted by operations at the Valhalla Central site.

3.3.1 Groundwater Level Changes

A small quantity of groundwater is likely to be needed for camp construction and exploration well drilling in this area. This water might be available from the Liveringa

Formation, which can include minor aquifers, although the formation is quite thin at Valhalla Central.

Low hydraulic conductivity could result in relatively high water-level drawdown in the pumped bore, but measurable drawdowns would not be transmitted more than a few hundred metres from the bore, and groundwater levels would recover quickly once the pumping ceased.

This has been shown by close monitoring at the Valhalla North and Asgard sites, where extraction from bores with screened intervals at least 100 m deep in the Liveringa Formation had little or no impact on groundwater levels in nearby monitoring bores screened at shallow depths in the formation. For example at Valhalla North (Rockwater, 2016) pumping of the production bore caused small, short-term drawdowns of up to 0.07 m to 0.08 m in monitoring bores located only 27 m to 55 m away. For most of the period of extraction, no drawdowns were detected.

3.3.2 Water Quality Changes

Chloride concentrations were also closely monitored in bores at the Valhalla North and Paradise sites before, during and after hydraulic fracturing (HF) operations were conducted. That ion was selected as a key indicator, as concentrations in the HF fluid and in the flow-back water were several orders of magnitude higher than in the shallow groundwater. There were no indications from the monitoring (Figs. 6 and 7) of any impact from operations at the sites on groundwater quality. The dashed line in the figures (which were produced by Buru) represents the start of the HF operations.

Figure 6: Chloride Concentrations at Asgard 1 Well Site

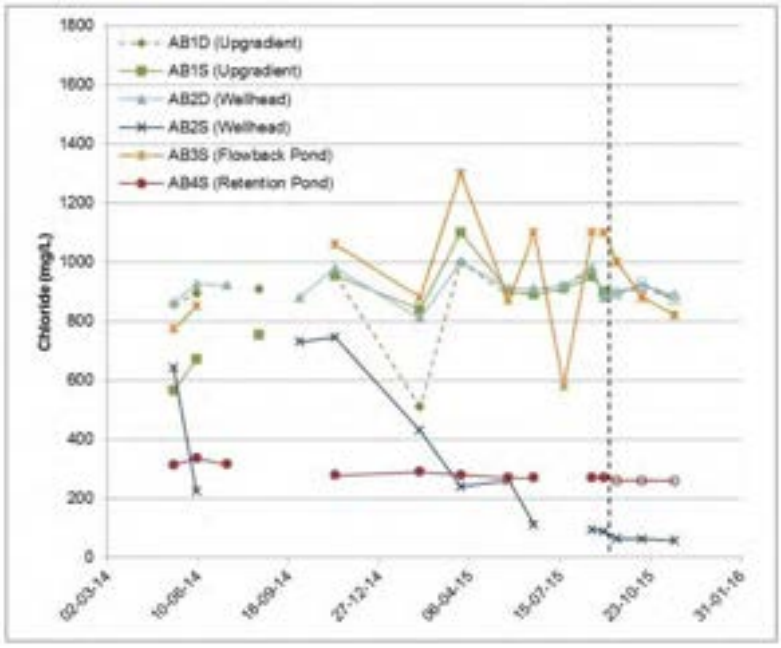


Figure 7: Chloride Concentrations at Valhalla North 1 Well Site

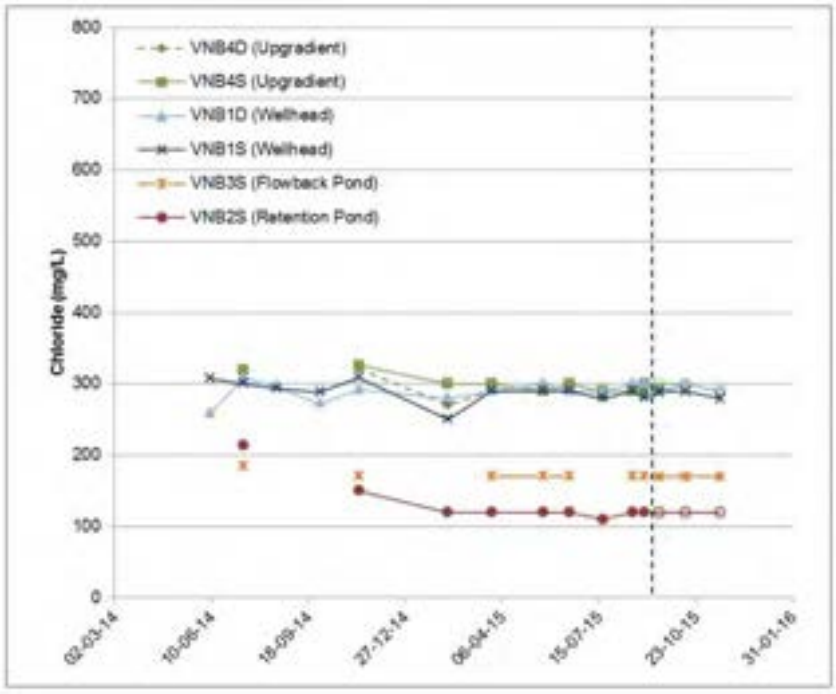


Similarly, it is considered very unlikely that the planned operations at Valhalla Central will have any impact on groundwater quality.

3.3.3 Numerical Modelling to Predict Impacts, Valhalla Central

A simple numerical groundwater model was constructed to predict potential groundwater-level drawdowns around a production bore at the planned Valhalla Central site. It consists of a rectangular grid of 57 rows, 57 columns and two layers covering an area of 5 km by 5 km centred on a production bore. Layer 1 extends to 50 m depth, and Layer 2 to 170 m depth. Model cell sizes range from 25 m by 25 m near the production bore, to 100 m by 100 m in peripheral areas. It utilises Processing Modflow Pro version 8.0.45, which incorporates MODFLOW, groundwater modelling software designed by the US Geological Survey (McDonald and Harbaugh, 1988).

The model was set up initially with parameters that are typical of a minor aquifer such as the Liveringa Formation, and then parameters were adjusted to calibrate the model to drawdowns observed in the two (relatively) deep monitoring bores at Valhalla North from 3 July to 8 July 2015, after which groundwater levels recovered rapidly to pre-pumping levels.

Water meter readings indicate that a total of 1,955 kL were pumped to 26 July – if all that was pumped over the five day period that would be an average of 390 kL/d, and that rate was simulated in the model. Drawdowns increased to 0.08 m in bore VNB1D located 55 m

west of the production bore, and to 0.07 m in VNB4D, 27 m east of the bore. The production bore was modelled in Layer 2, and the monitoring bores in Layer 1.

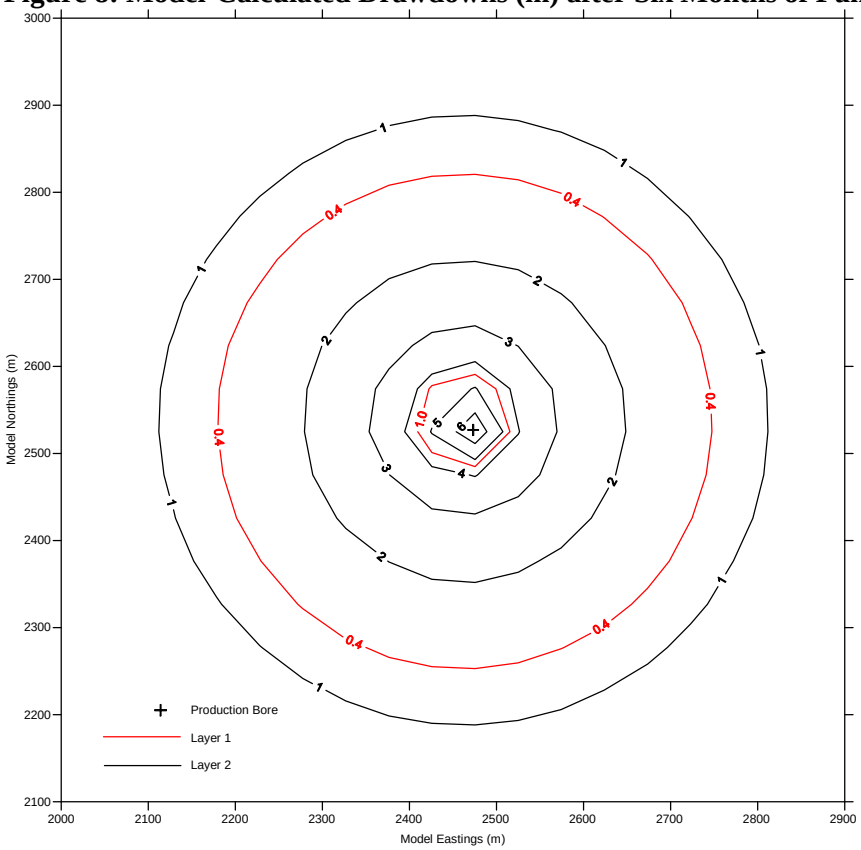
A close correspondence (within 0.01 m) was achieved between measured and model-calculated drawdowns with the parameters given in Table 4.

Table 4: Parameters Adopted in Model Calibration

Parameter:	Unit	Layer 1	Layer 2
Horiz. Hydraulic Conductivity	m/d	0.05	0.12
Vert. Hydraulic Conductivity	m/d	0.005	0.01
Specific Yield	v/v	0.05	NA
Storage Coefficient	v/v	NA	0.0003

The model was then run to predict groundwater-level drawdowns arising from pumping a bore over a six-month period (as at Valhalla North) at the average rate required to produce the total allocation for Valhalla North (33,400 kL), i.e. 183 kL/d. The calculated drawdowns after six months of extraction are shown for each model layer in Fig. 8.

Figure 8: Model-Calculated Drawdowns (m) after Six Months of Pumping 183 kL/d



They indicate that drawdowns of 1 m or more could extend up to 410 m from a production bore at the (deep) level of the screens in the production bore, but that there would be smaller drawdowns in the top 50 m of the Formation: 1.2 m close to the bore decreasing to 1 m at a distance of about 56 m from the bore, and 0.1 m at 690 m distance. Although the

modelling is based on assumed parameters and the results are not unique, the calculated drawdowns are consistent with monitoring at Valhalla North and Asgard, where drawdowns at shallow depths (albeit with lower pumping rates) have been very small, and difficult to distinguish from normal seasonal fluctuations of about 0.2 to 1 m (depending on the frequency and magnitude of recharge events).

Sensitivity Analysis

As a sensitivity analysis, the modelling was repeated for pumping over six months to produce a volume of 10,000 kL (the quantity used in the last exploration programme); and for 100,000 kL, the likely volume that would be needed for a commercial field. The results are summarised with those for the licensed allocation (given above), in Table 5.

Table 5: Results of Sensitivity Analysis

Model Scenario	Max. Drawdown at Bore (m)		Distance from Bore of 1 m Drawdown (m)	
(Water Vol., kL)	Layer 1	Layer 2	Layer 1	Layer 2
10,000	0.35	2.8	N/A	106
33,400	1.2	9.5	56	410
100,000	3.5	28	340	780

Even with pumping for the maximum volume, groundwater levels would be expected to recover to within 0.2 m of the static water level within hours of the cessation of pumping, and to fully recover within weeks.

3.3.4 Potential for Impacting Stygofauna and Troglofauna

Likelihood of Occurrence, Valhalla Central

A brief desktop study was undertaken to assess the potential risk to stygofauna and troglofauna at the Valhalla Central project. As part of the desktop study, various literature and data were reviewed, including previous subterranean fauna studies in the region, WA Museum data, available hydrogeological reports, and project-specific data supplied by Buru.

The Liveringa Formation forms the upper-most aquifer in the Project area and consists of mainly fine-grained sediments (siltstone and shale) with more-permeable sandstone beds being less common. The shallow shale and siltstone sediments of the formation provide a potential habitat for stygofauna, although bore yields in the area suggest that permeability is low, and so it is less likely that stygofauna will be present.

Groundwater salinity is within a range that stygofauna are known to occur, with salinities of local bores ranging from 450 to 1,600 mg/L TDS.

Groundwater extraction is seen to be the principal activity that could potentially affect stygofauna at Valhalla Central. Any drawdown of groundwater level in surficial aquifers could reduce the habitat available for stygofauna. Indirect impacts such as groundwater contamination, changes to hydrology, and nutrient balances also have the potential to affect subterranean habitats.

The absence of caves or significant voids in the fine-grained sediments at Valhalla Central indicates that there is unlikely to be suitable habitat for troglofauna. Given the nature of disturbance of the Valhalla Central exploration proposal, there is unlikely to be a direct impact to any troglofauna habitat (if present).

Recorded Occurrence Elsewhere

Stygofauna

There are few published studies of stygofauna in the Kimberley and only one record of stygofauna sampling within 50 km of Valhalla. The results of published studies in the region are summarised below.

Nine species of stygofauna have been identified within rocks at the Ellendale Diamond Mine (Ellendale), 45 km north-east of Valhalla (Rockwater, 2015). At Ellendale, the diamond-bearing ore consists of olivine lamproite with tuffaceous margins. Groundwater occurs in shallow aquifers comprising weathered, calcified or calcretised lamproite; and in deep aquifers of tuffaceous sandstone and fractured lamproite, particularly along geological contacts. The stygofauna community at Ellendale included five species of copepod, three species of ostracod and an isopod. After consultation with DER, a stygofauna monitoring plan was adopted for the project and annual samples were taken from a number of reference sites to assess the long-term impacts of mining and dewatering. Ongoing sampling confirmed that the project was unlikely to have a negative impact on the local community, and the species collected were unlikely to be restricted.

A comprehensive stygofauna sampling programme was undertaken to assess the stygofauna values of the Browse LNG Development on the Dampier Peninsula, 60 km north of Broome (Rockwater 2012). The survey targeted shallow sandstone within the unconfined Broome aquifer. The Broome aquifer typically consists of unconsolidated coarse-grained sandstone and conglomerate with minor lenses of siltstone and claystone, and thin coal seams (Laws 1991a). The survey recorded 18 stygofauna species in total, although only nine occurred within the impact area of the Browse LNG Precinct. This represented a relatively rich stygofauna community and the first such community reported on the Dampier Peninsula. Regional sampling demonstrated that five of the nine species collected in the Precinct also occur at several regional locations, up to 75 km from the

Precinct. Regional stygofauna communities were identified at Barred Creek, Coconut Well, Broome townsite, Nita Downs Station, Beagle Bay and Kilto Station.

Two potential stygofauna species were collected at Nicolson's Find, a gold deposit approximately 280 km south-east of Valhalla. A widespread tubificid worm (*Pristina longiseta*) and a potential new species of *Strandesia* (Ostracoda) were collected from mineral exploration holes, drilled into metasediment (Rockwater, 2012b). Other taxa within the genus *Strandesia* are often found in surface water and it was considered unlikely that the Nicolson's Find species would be confined to the project area. It was determined that the stygofauna species recorded within the project area were stygophiles, having opportunistically colonized the local aquifers via passive dispersal.

The alluvial aquifers of the Ord River Irrigation Area (ORIA) are known to contain unique stygofauna communities in the north-east Kimberley. Humphreys (1999) and Ecowise (2005) identified stygofauna in areas of the Stage 2 (M2) ORIA development, approximately 500 km north-east of Valhalla. The studies identified syncarids, copepods, ostracods, oligochaetes and oribatid mites from alluvial sediments within the ORIA.

Stygofauna sampling for the Argyle Diamond Mine in the north-east Kimberley identified at least 15 species of stygofauna (EPA 2005). Cho, Park and Humphreys (2005) described six species of Parabathynellidae from the Kimberley region, including taxa recorded at Argyle and from the ORIA.

Sampling at Sorby Hills (550 km north-east of Valhalla) yielded ten species from six orders or higher level groups (Bennelongia, 2012). These included nematodes, an oligochate worm (order Tubificida) and four orders of crustacean – (Ostracoda, Copepoda, Syncarida and Isopoda). Sampling targeted river flood plains, as well as low sandstone hills and eroded limestone reefs.

Troglofauna

There are very few published records or results of troglofauna sampling in the Kimberley region. The Western Australian Museum lists records of troglofauna in the Kimberley, primarily from cave complexes. Three species of spider (*Myrmopopaea 'lipposa', Wandella pallida* and *Opopaea phineus*) were collected from caves in the Ningbing Ranges north of Kununurra, with nearby caves recording pseudoscorpions (*Indohya gollum, Lagynochthonius* sp.), diplurans (*Cocytocampa humphreysi*) and cockroaches (*Nocticola brooksi*). Caves within the Oscar Ranges also recorded troglobitic pseudoscorpions (*Cheiridium* sp.nov) and schizomids (*Bamazomus hunti*). Napier Range caves recorded similar faunal groups, with pseudoscorpions (*Indohya napierensis*) and schizomids (*Apozomus eberhardi*). Two of the described schizomids (*Apozomus eberhardi* and *Bamazomus hunti*) have been categorised as troglobitic, although the specimens

possess eye spots and it is likely that they are troglophiles, inhabiting sheltered environments within the gorges (Harvey, 2001).

Museum records also list troglobitic pseudoscorpions at the Argyle Diamond Mine in the north-east Kimberley. *Indohya* '*sp.Argyle Mine*' was collected from one site during a 2005 sampling programme.

An extensive sampling programme was undertaken for the Brown Range Project, near the WA–NT boarder (Outback Ecology, 2014). Sampling targeted the widesread and contiguous regolith, and weathered fractured rock. Over 160 samples were collected over five sampling rounds, yielding only two troglobitic species. Both species were also collected outside the project area and it was concluded that because of the continuity and extent of the subsurface habitiat, any species present were unlikely to be restricted.

A desktop assessment at Nicolson's Find, located approximately 280 km south-east of Valhalla, focused on strongly weathered oxidised metasediment (Rockwater, 2012b). The assessment concluded that the geological units within the project area and in the immediate area surrounding the deposits did not provide suitable subterranean habitat for troglofauna.

None of the listed studies represent sampling in comparable habitats to those at Valhalla Central.

Concluding Comments

Based on results of previous sampling, it appears that sandstone aquifers of the Kimberley contain moderately diverse stygofauna communities with very few stygofauna species restricted at small (project level) scales. The range of groundwater salinities recorded at Valhalla are within the tolerance levels recorded for stygofauna, and the shale and siltstone of the Liveringa Formation could potentially provide habitats for stygofauna. However, the reported low yields from bores screened in this formation suggest that suitable voids within sediments may be limited. The absence of more permeable sandstone lithologies previously reported to support stygofauna communities in the Kimberley may indicate that the potential for stygofauna is moderate to low. The regional extent of aquifers in the project area and absence of any geological barriers that may prevent dispersal suggest that any stygofauna community at Valhalla is unlikely have a restricted distribution.

Given the relatively small impact areas (drawdowns of at least one metre over a 400 m radius) surrounding production bores, it is unlikely that the project will have a significant impact on the stygofauna values of the area or that the disturbance of potential habitat at Valhalla would result in a level of impact that would result in unacceptable risks to the conservation status of any stygofauna community.

Based on results of the risk assessment, it is likely that low intensity sampling in accordance with relevant EPA guidelines would be appropriate for scenarios where approximately 100,000 kL of groundwater may be extracted from a bore over a six-month period. This would correspond to a commercial well pad which would likely be subject to an EPA assessment under the *Environmental Protection Act 1986*, in which case stygofauna may be considered as a relevant environmental factor.

Troglofauna records of the Kimberley are all associated either with cave complexes or subterranean habitats within ranges and gorges that are vastly different to those at Valhalla Central. The fine-grained sediments within the project area do not appear to provide suitable habitat for troglofauna.

4. GRANT AQUIFER

4.1 BACKGROUND

The Betty unit of the Grant aquifer is likely to be the deepest aquifer that could potentially be impacted by Buru's activities. That unit and the shallower Carolyn unit form the Grant aquifer. Buru is to conduct a risk assessment on the Grant aquifer, and so Rockwater was requested to review the available hydrogeological data for the aquifer to provide baseline information to be used in the risk assessment.

4.2 OCCURRENCE

The Grant Formation extends over most of the Canning Basin, including the Fitzroy Trough, and in the northern Canning Basin comprises three units – the Carolyn, Winifred and Betty (Ghassemi et al., 1991).

The depth and thickness of the Grant Formation generally increases from west to east through the Buru wellfields, although the base elevation and thickness are less at the eastern Asgard 1 bore (Table 6).

Table 6: Top and Base Elevations, Grant Formation, Buru Wells

Well	Ground Level	Elevation of Grant Fm		Thickness
	(m AHD)	Top (mAHD)	Base (mAHD)	(m)
Yulleroo 4				
Yulleroo 2	57	-376	-677	301
Ungani 1	78	-766	-1259	493
Paradise 1	64	-412	-1211	799
Valhalla North	109	-715	-1499	784
Valhalla 1	110	-524	-1332	808
Asgard 1	123	-695	-1246	551

Also, the Formation outcrops between Ungani 1 and Paradise 1 on the eastern side of the Fitzroy River in the Grant Range; and south-west of Ellendale it thickens from north-east to south-west.

The main area of outcrop is near the northern edge of the Canning Basin, along a south-easterly line extending from about 65 km east-north-east of Derby to south-east of Fitzroy Crossing. This area is about 40 km north-east of Valhalla and 30 km north-east of Asgard. The width of outcrop is up to 23 km.

The Grant Formation also outcrops 45 km south of Asgard in the Saint George Ranges. Both the Saint George and Grant Ranges are eroded anticlines within the Fitzroy Trough.

The top of the formation is shallowest at Yulleroo 2 (433 m below ground level) and deepest at Valhalla North (824 m below ground level). The base of the formation is also deepest at Valhalla North (1,609 m below ground level); and the formation is thickest at Valhalla 1 (808 m).

The Grant Formation, where saturated, is known as the Grant aquifer, which is one of the major aquifers of the Canning Basin, producing substantial quantities of water at Fitzroy Crossing and at the Ellendale diamond mine.

4.3 GEOLOGY

The Grant Formation is of Carboniferous to early Permian in age and unconformably overlies the Reeves Formation at Ungani; and the Anderson Formation in the Yulleroo and Valhalla –Paradise-Asgard areas. It is unconformably overlain by the Poole Sandstone at Ungani and in the Valhalla-Paradise-Asgard area, and by the Wallal Sandstone at Yulleroo, and so is in direct hydraulic connection with those aquifers.

The Formation is marine to lagoonal in origin and comprises massive fine to coarse grained sandstone, with minor siltstone and shale.

The Grant Formation in the northern Canning Basin consists of three units (youngest to oldest): fine to coarse grained sandstone with some conglomerate and shale of the Carolyn unit; siltstone of the Winifred unit; and fine to coarse sandstone of the Betty unit (Ghassemi et al., 1991, Smith, 1992). The youngest and oldest units are aquifers, and the middle unit is an aquiclude or aquitard.

4.4 HYDROGEOLOGY

4.4.1 Groundwater in Storage

Laws (1991b) estimated that the volume of groundwater stored in the Grant Formation in the Canning Basin is about 35,000 x 10^9 m^3 (35 million gigalitres (GL)). This compares with a volume of 1.1 million GL of water stored in the Yarragadee aquifer south of Bunbury in Western Australia (Water Corporation, 2005).

4.4.2 Aquifer Parameters

Ghassemi et al. (1991) analysed data from drill core and side-wall cores from petroleum wells and gave a permeability of 0.10 m/d and porosity of 11 percent for the Grant Formation. Core data analysed by Buru Energy indicate that Grant Formation permeabilities average 0.43 m/d and porosity averages 18 percent.

Hydrogeological information on the Grant Formation is available from bores at the Ellendale mine-site, 50 km north of Valhalla, where the Formation outcrops. There the aquifer has a saturated thickness of 110 to 250 m or more, and hydraulic conductivities range from 1.2 to 20 m/d and average about 8 m/d.

At Fitzroy Crossing sandstone of the aquifer is strongly cemented and generally of low permeability – successful bores intersect fractures and joints (DoW, 2008). Elsewhere such as at Ellendale, the permeability is mostly associated with primary porosity.

4.4.3 Recharge, Flow Directions and Discharge

The Grant aquifer is recharged directly by rainfall, and from flow in the Fitzroy River and other creeks, in outcrop areas such as along the northern edge of the basin and in the Saint George Ranges to the south. These areas are relatively small and so recharge volumes are probably low. The relationship with the overlying Poole and Wallal Sandstones is not known (Laws, 1991b) – there is likely to be recharge from them to the Grant aquifer in some areas, and discharge from the aquifer to them in other areas. Runoff from the Devonian limestone of the Oscar Range probably enhances the recharge in some areas such as at Ellendale.

Groundwater in the Grant aquifer generally flows westward from the main outcrop areas towards the coast in Roebuck Bay and King Sound, to discharge to the ocean off-shore.

Based on groundwater depths given in DoW (2008) and levels shown on the Derby Hydrogeological Sheet (Smith, 1992), heads in the aquifer fall from about 100 m AHD at Fitzroy Crossing to 50 m AHD on the Grant Range and would be about 5 m AHD near the coast.

4.4.4 Aquifer Development

The aquifer is poorly utilised at present but it has been developed in areas of outcrop or subcrop including the Fitzroy Crossing town borefield, bores on Gogo Station, and the borefield at the Ellendale diamond mine.

Potential bore yields for the aquifer in the Buru wellfield areas are not known, however bore yields of 600 to 2,400 m^3/d have been achieved at Ellendale, and up to 500 m^3/d from bores in the Fitzroy Crossing town water supply borefield (Lindsay and Commander, 2006). Palm Spring No. 1, located 30 km north-north-east of Valhalla 1 and not far from the outcrop area, intersected the Grant Formation at 142 m depth, and had a reported yield of 655 m^3/d (WIR database).

Yields are likely to be lower where the aquifer is deep, as there could be fewer open fractures and joints, and lower primary porosity.

4.4.5 Groundwater Quality

Groundwater salinity generally increases with distance from the recharge areas, and probably with depth in the aquifer.

The groundwater at Ellendale has salinity of about 300 mg/L TDS, and salinities are usually in the range 500 to 2,000 mg/L TDS elsewhere, i.e. fresh to brackish (Lindsay and Commander, 2006). The low salinity at Ellendale is attributed to runoff from the Devonian ranges nearby and consequent high rates of recharge. The water from the Fitzroy Crossing borefield is also fresh, with salinity of about 250 mg/L TDS based on the electrical conductivity values reported in DoW (2008).

In the Valhalla-Paradise area groundwater in the aquifer is likely to be fresh to brackish with salinity in the range 800 to 2,300 mg/L TDS, and one possible salinity of about 14,000 mg/L TDS, all estimated from the resistivity logs.

At Ungani, groundwater in the Grant Formation is estimated to have a salinity of 6,600 mg/L TDS, also from the resistivity logs. North of the Ungani area, Smith (1992) reports salinities for the basal Betty unit of 2,700 to 6,400 mg/L TDS, increasing up to 70,000 mg/L TDS on the Dampier Peninsula. The uppermost Carolyn unit and Poole Sandstone

have salinities of 250 to 2,600 mg/L TDS north of Ungani near the outcrop area and up to 25,000 mg/L TDS on the Dampier Peninsula (Smith, 1992).

Groundwater salinity in the Yulleroo area is indicated from the resistivity and conductivity logs to be about 14,000 mg/L TDS.
The concentrations of other water-quality parameters for the aquifer are not known, except in the recharge areas at Ellendale and Fitzroy Crossing where the groundwater is fresh. For example, water from the Fitzroy Crossing bores is circum-neutral with pH 6.8 to 7.1; barium, boron, dieldrin, fluoride, nitrate, nitrite and uranium were all well within ADWG values (NH&MRC, 2011); and aluminium, iron and manganese were also low although in one sample iron just exceeded the aesthetic guideline value with a concentration of 0.34 mg/L (DoW, 2008).

APPENDIX I

DEFINITIONS OF TECHNICAL TERMS USED

Term	Meaning
AHD	Australian Height Datum
Anticline	A structural fold that is convex upward
Aquiclude	Rock units of very low permeability that form barriers to fluid flow.
Aquifer	A geological formation able to receive, store and transmit significant quantities of water
Aquitard	A saturated unit of low hydraulic conductivity that can store and slowly transmit groundwater either upward or downward depending on the vertical hydraulic gradient
Brackish Water	Water containing between 1,000 and 3,000 mg/L of total dissolved solids, tasting slightly salty
Confining Layer	A bed of significantly lower hydraulic conductivity which retards the vertical movement of water
Discharge	The release or extraction of water from an aquifer. Typical mechanisms of natural discharge are evapotranspiration by phreatophytes, springs, and drainage to surface water bodies
DST	Drill Stem Test is a procedure for isolating and testing the pressure, permeability and productive capacity of a geological formation during the drilling of a petroleum well.
Electrical Conductivity (EC)	The measure of a solution's (or rock's) ability to conduct electricity. EC units are used to express salinity levels in water.
Fresh Water	Water containing less than 500 to 1,000 mg/L of total dissolved solids, and generally suitable for drinking
GPS	Global Positioning System: a satellite navigation system that provides location and time
Groundwater	Water occurring below the land surface in pores or fissures, generally in motion and part of the hydrological cycle
Graben	An elongated block that has been down-thrown along bounding faults
Hydraulic Conductivity	The capacity of a porous medium to transmit water through a unit cross-sectional area. Hydraulic conductivity is dependent upon the physical properties of the porous medium and the viscosity of the water
Hypersaline	Water of salinity greater than that of sea water (35,000 mg/L Total Dissolved Solids)
Outcrop	The exposure of rock or sediment at ground surface
Permeability	The ability of a porous medium to transmit water under a given hydraulic gradient. Similar to hydraulic conductivity
Pindan	A red soil composed of silty and clayey fine to medium sand typical of the south-western Kimberley
Porosity	A measure of the void or pore space within rocks and sediments (the ratio of the volume of void spaces to the total volume)
Resistivity	The measure of a solution or rock to resist the transmission of electricity. The inverse of electrical conductivity
Saline Water	Water containing more than about 3,000 mg/L of dissolved salts
Slug Test	An aquifer permeability test in which a slug, typically a volume of water, is instantaneously placed in a bore, displacing the water upward. Measurements of the falling water levels are used to estimate permeability
Sustainable Yield	Commonly the quantity of water that can be pumped from an aquifer without depleting the volume in storage and without causing deleterious environmental impacts. Definition is subject to debate.
Total Dissolved Solids (TDS), or Salinity	The total amount of mobile charged ions, including minerals, salts or metals dissolved in a given volume of water, typically expressed in units of milligrams per litre of water (mg/L)
Water Table	The surface of the groundwater in an unconfined aquifer
Wetland	An area saturated with water either permanently or seasonally. Typically supports a distinct ecosystem. Can be an expression of the water table
Yield	The rate at which water can be pumped from a bore

Appendix J. Local Groundwater Characterisation Results

Groundwater Monitoring Bores

Cell is yellow where the limit of reporting (LoR) is halved

RE: Response to comments on the 3 October 2023 technical memorandum titled "Modelling of drawdown impacts from proposed rig supply bores in the Bennett Resources Valhalla Gas Development Project"

Dear Mr. Fertch,

In October of 2023 INTERA Geosciences Pty Ltd (INTERA) submitted the above-referenced memo (the "original memo") to Australasian Environmental Solutions (AES). In March of 2024 INTERA received a set of comments generated by an independent review of the memo by an external reviewer. The specific comments received are as follows:

1. *The model has several parameter assumptions and many limitations.*
    a. *Can the parameters and assumptions be clearly stated. Specifically, can a sensitivity analysis be conducted for these parameters [aquifer/aquitard thickness, hydraulic conductivity, aquifer thickness, storage] (i.e. increase/ decrease the values and run multiple options through the model to understand the impact of these assumptions)*
    b. *Can a number of extraction rates be studied to understand impacts of varied extraction rates.*
    c. *Can the limitations be described and justified why they are suitable for the purpose of this analysis.*
    d. *Justify why only single model layers are suitable (rather than multiple layers) and validate this against the vertical stratigraphy.*
2. *AES has been informed that MODFLOW 2005 may be outdated and have been informed other software is available (MODFLOW version includes MODFLOW-6, MODFLOW-USG, MODFLOW-SURFACT). Is it possible to provide a justification as to the software suitability for the scope?*

The attached memo titled "Revised modelling of drawdown impacts from proposed rig supply bores in the Bennett Resources Valhalla Gas Development Project" (the "revised memo") contains an updated modeling evaluation prepared in response to the review comments. This letter summarizes the updated modeling and analysis done to address those comments.

Model Software Update

Comment 2 noted that the model was prepared using MODFLOW-2005 rather than one of the later editions of the modeling software. MODFLOW-2005 was chosen because it is an appropriate model for the scope of the problem (i.e., simulating drawdowns in an aquifer for a specific pumping scenario for both confined and unconfined conditions). The subsequent versions of the modeling software, including the latest MODFLOW version (MODFLOW 6), include the same basic modeling techniques used to simulate drawdown and contain significant modeling capabilities that are not specifically applicable to the problem addressed in the memo, therefore, the use of MODFLOW 6 or any of the other software packages listed were not considered.

In response to this comment, the model developed for the original memo was ported to the MODFLOW 6 software environment and the original models simulations were performed. Updated drawdown maps and a discussion of the results are presented in Section 5 of the revised memo. In summary, all model results are essentially equivalent to the previous results. For the Liveringa simulation the modeled drawdowns at all existing bores were less than <0.01 m and the production wells were capable of producing the required amounts with drawdowns that are much less than the available saturated thickness. For the Grant/Poole simulation, the modeled drawdowns at all existing bores were less than 0.4 m and the production wells experienced drawdowns of less than a meter.

Model Input Parameter Justification

Comment 1 discusses input parameter assumptions and requests justifications for the assumptions and parameters used in the model. The requested discussions are included in the revised memo in a new section called **Section 6.0 Modeling Limitations and Sensitivity Analysis**. This section includes a discussion of model limitations and the appropriateness of using single layer models rather than multi-layer models.

Model Sensitivity Analysis

Comment 1 also includes a request for a model sensitivity analysis to evaluate model sensitivity to reasonable ranges of input parameters as well as various extraction rates. A sensitivity analysis was performed using the revised MODFLOW 6 version of the models. The sensitivity analysis uses a variety of extraction rates that range from 50% to 300% of the expected extraction rates, with the overall pumping time (182 days) held constant. For the Liveringa unconfined model the sensitivity to variations in hydraulic conductivity and specific yield were investigated. Hydraulic conductivity values were varied over 5 orders of magnitude (0.00001 to 0.1 m/d) to match the reported range of values presented in the original memo. The results from the original simulations were included in the analysis for comparison. The approach and results are also presented in Section 6 of the revised memo.

Summary of Results for Revised Memo

Model simulations with the updated model software successfully reproduced the results from the original memo. The sensitivity analysis indicates that some of the unconfined aquifer simulations with the most restrictive input parameters indicate that the Liveringa formation may not be able to sustain 100% of the required pumping rates; however, these simulations assume a conservative pumping approach (i.e., all wells pumping at the same time and at maximum rates rather than pumping staggered throughout the gas production well development period) so these simulations

are not interpreted to indicate that the proposed well production from the shallow unconfined system is not viable. All simulations for the confined Grant/Poole system indicate that the aquifer is capable of supplying the required volume of water, and most simulations other than the lowest ranges of T and S with pumping rates greater than 100% of the required volume indicate minimal impact to existing bores.

Re: Revised modelling of drawdown impacts from proposed rig supply bores in the Bennett Resources Valhalla Gas Development Project

1.0 Introduction

As requested, INTERA has prepared the following groundwater model-based evaluation of potential aquifer drawdowns and well interference at the proposed Valhalla site near Fitzroy Crossing, WA. It is our understanding that 20 hydrocarbon exploration wells across 10 well sites are proposed (**Figure 1-1**) with two water production bores installed at each wellsite for rig supply. The overall extent of the development is indicated on Figure 1-1 as the Development Envelope (also referred to in this report as the "project site"). Bennett Resources is proposing to undertake an unconventional exploration drilling and hydraulic fracture stimulation program within the study area targeting hydrocarbons in the Laurel Formation at depths ranging from 2,000 meters (m) to 4,000 m below ground level (bgl). The rig supply bores will provide water for hydraulic fracturing and well construction.

The expected total demand from the rig supply bores at any at each well site is 33,400 kiloliters (kL) produced over a 6-month (182-day) period, which equates to a consistent pumping rate of 183.52 cubic meters per day (m^3/d) for 182 days. It is also assumed that the rig supply bores will not represent an on-going demand upon the system, therefore, the groundwater models developed here only simulate a 182-day pumping period with an additional 270-day post-pumping recovery period. The models also assume that all ten sets of rig supply bores will operate concurrently. This is assumed to be a somewhat conservative approach as the wells will likely be installed in stages and there could be times when some rig supply bores are decommissioned before others are brought on-line.

The specific objective of the modelling is to estimate aquifer drawdowns induced by the rig supply bores and determine if there is a risk of groundwater production from the rig supply bores impacting existing bores in the area, creating excessive bore interference, or causing environmental impact to local groundwater dependent ecosystems (GDE).

2.0 Site Hydrogeology and Conceptual Model

The site sits near the northeast flank of the Fitzroy Trough within the Canning Basin geological region (**Figure 2-1**). The surface geology for the Canning Basin (**Figure 2-2**) indicates that the middle-to-late Permian Liveringa Group aquifer system is exposed at the surface at and around the project site. The Liveringa Group is comprised mostly of siltstone and limestone but also contains minor sandstone and thin coal beds (Lindsay and Commander, 2005). The Liveringa group is considered unconfined with some localized semi-confining units. The Liveringa is underlain by a regional aquitard called the Noonkanbah Formation, which overlays the Poole

Sandstone, which in turn overlays the Grant Group. The Grant Group and Poole Sandstone are both considered to be regional aquifer systems that are generally confined by the Noonkanbah Formation. For this evaluation, they are grouped together as a single aquifer unit. A block diagram showing the relationship between the aquifer formations within the Fitzroy Trough are shown on **Figure 2-3**, with a general location of the section line for the edge of the diagram on Figure 2-2. The Liveringa Group and the Grant/Poole aquifer systems are considered for this study in the event that both aquifers could supply water for the rig supply bores.

The potentiometric surface for the Grant/Poole aquifer system (**Figure 2-4**) indicates that hydraulic heads in the Development Envelope are 75-100 mAHD with a regional gradient from southeast to northwest. Ground surface elevations within the Development Envelope range from about 80 mAHD in the southwest corner to 145 mAHD along the northeast boundary; therefore, typical depths to groundwater in the Grant/Poole aquifer system are 5 to 45 m below ground surface (bgs). The potentiometric contours also suggest that groundwater is discharging to the mainstem and some tributaries of the Fitzroy River. A detailed study of groundwater-surface water interactions in an approximately 100-km reach of The Fitzroy River running to the south of the project site was presented in Harrington et al. (2011). Harrington et al. (2011) determined that The Fitzroy River is a gaining stream system that receives about 102 ML/day of groundwater inflow, with most of this flow (98.3 ML/d) derived from local sources representing recent recharge and shallow flow system. Harrington et al. (2011) also determined that fault zones in the system are providing preferential pathways for discharge from the deeper Grant/Poole system into the surface waters, which confirms that discharge is occurring from the Grant/Poole into the surface waters.

A regional potentiometric surface for the Liveringa is not available. Harrington et al. (2011) indicate that groundwater flow in the Liveringa is likely controlled locally by flow to surface waters in the Fitzroy River catchment with regional westward gradients like those in the Grant/Poole system.

Water quality data presented in Taylor et al. (2021) is relatively sparse for the aquifers near the project site, and there is insufficient data or information to determine if there are vertical interactions between the two formations or to develop aquifer parameters to model any vertical flows between the aquifers. For the evaluation described here, the two formations are assessed separately, and it is assumed that any vertical flows induced by pumping on one aquifer will not result in long-term impacts to the other aquifer.

The primary GDEs that could potentially be impacted by pumping from the proposed rig supply bores are associated with the main stem and tributaries of The Fitzroy River, with specific focus on Mount Hardman Creek given its proximity to the proposed rig sites. The proposed rig sites are all greater than 20 km from The Fitzroy River, and it is unlikely that temporary groundwater production from those bores will have any significant impact on GDEs associated with the Fitzroy River. Mount Hardman Creek is located approximately 1km away from the Muspelheim rig site and as such this well will be evaluated using the models described in subsequent sections.

3.0 Modelling Approach

A set of numerical groundwater models were developed using MODFLOW 6[1]. The Groundwater Vistas (ESI) modeling software was used to develop the input files and process model output. Two primary models were developed, one simulating the unconfined Liveringa Group (Mod 1) and one simulating the confined Grant/Poole aquifer system (Mod 2). Each model included a single

[1] https://www.usgs.gov/software/modflow-6-usgs-modular-hydrologic-model

model layer, with Mod 1 assigned an unconfined layer condition and Mod 2 assigned a confined layer condition. Each model grid shared the same footprint, with a 1000 x 1000-meter row and column spacing that was refined to about 62 x 62 m spacing within the development envelope using quadtree mesh refinement (**Figure 3-1**). Grid refinement within the development envelope was used to allow for more precise representation of the modeled impacts from the proposed rig supply bores.

The south and west boundaries in each model were assigned CH model cells (Figure 3-1) with heads designed to develop a similar hydraulic gradient as presented in Figure 2-4. Since the actual drawdown impacts presented in Section 5 below are very small and localized, it is assumed that the regional hydraulic gradients won't have a significant effect on drawdowns around the project site; therefore, the model is not expected to be particularly sensitive to the regional gradient. For Mod 1, a set of boundaries simulating Fitzroy Creek (Figure 3-1) were included with elevations based on the typical stage elevations obtained from Google Earth. These cells were not included in Mod 2. The model assumes that the northeast and southwest boundaries of the model domain are no-flow boundaries which are determined by the extent of active model cells (Figure 3-1).

The Liveringa Group aquifer is unconfined; therefore, the

saturated thickness of the Liveringa is the difference between the water table elevations and the elevations of the base of the aquifer. Water levels for the Liveringa are not available. Taylor et al. (2021) indicate that groundwater in the Liveringa is generally flowing in a westerly direction with discharge to the Fitzroy River. Pre-development water levels in the aquifer were based on Fitzroy River stage elevations and a general westerly hydraulic gradient. Static water levels for Mod 1 were estimated based on a steady-state model simulation dependent upon Fitzroy River stage elevations, which results in Liveringa water levels ranging from about 70 to 85 mAHD at the project site. These values are slightly lower than the values of 75 to 100 mAHD for the Grant/Poole system presented in Taylor et al. (2021; see Figure 2-4), which is consistent with upward hydraulic gradients in the system identified by Taylor et al. (2021).

The elevation of the base of the Liveringa within the Fitzroy Trough ranges from -84 to -171 mAHD (Rockwater, 2016). A representative value of -100 mAHD was therefore assigned to Mod 1. This indicates that the initial saturated thickness of the LIveringa within the development envelope is about 170 to 185 meters.

The Grant/Poole aquifer system is assumed to be confined throughout majority of the model domain and is therefore simulated in Mod 2 using a single model layer assigned a confined layer condition. The thickness and elevations of the aquifer system are variable and are not known at the project site; therefore, the aquifer is simulated assuming a constant transmissivity rather than a hydraulic conductivity and thickness. Transmissivity is defined as the product of the hydraulic conductivity and the saturated thickness. Transmissivity estimates were based on ranges of values presented in Taylor et al. (2021) as discussed below in Section 4.

An attempt was made to incorporate recharge into Mod 1 using the mean recharge estimate of 1.8 mm/yr presented in Taylor et al. (2021) calibrated to estimated groundwater discharge to the Fitzroy River (~100 ML/d over a 100 km reach) by varying hydraulic conductivity in a steady-state version of the model. The results indicate that, given the assumed geometry of the system, the regional hydraulic conductivity of the Liveringa would need to be unrealistically high to match the expected groundwater discharge rate and produce a reasonable water table in the model. Recharge was therefore not included in the final predictive model. This is considered acceptable

as it provides a more conservative estimate of the potential impacts from the proposed pumping bores.

4.0 Model Inputs

4.1 Aquifer parameters for the Liveringa (Mod 1)

Hydraulic conductivity (K) values for the Liveringa Group formations as presented in Taylor et al. (2021) range from 3.25 x 10^{-5} to 0.0913 m/d. Rockwater (2016) used model calibration to drawdown data from nearby pumping bores to determine a representative K of 0.05 m/d for the Liveringa. This value is at the higher end of the range presented in Taylor et al. (2021), which is consistent with the high K values suggested by our attempted calibration to recharge and discharge estimates for the aquifer. A K of 0.05 m/d was therefore assumed for Mod 1.

Taylor et al. (2021) present porosity estimates for various formations in the Fitzroy Trough and assume a representative porosity of 0.05 for the Liveringa Group. This is equal to the value for specific yield (Sy) used by Rockwater (2016) for their Liveringa drawdown model. A Sy of 0.05 was therefore assumed for Mod 1.

4.2 Aquifer parameters for the Grant Group/Poole (Mod 2)

Thickness variations are uncertain in the Grant/Poole aquifer system; therefore, the Grant/Poole system was modeled assuming a homogeneous transmissivity (T) rather than hydraulic conductivity and thickness. Taylor et al. (2021) indicates T values from aquifer tests ranging from 6 to 525 m^2/d. A representative regional transmissivity for the aquifer is likely in the middle to upper part of this range of values; therefore, an intermediate value of 265 m^2/d was applied to the predictive model.

Mod 2 assumes a fully confined aquifer condition for the active model layer; therefore, the relevant aquifer storage coefficient is the storativity (S), which is defined as the product of the saturated thickness and the specific storage (Ss). Taylor et al. (2021) states that, for the Poole sandstone, "…specific storage has been derived for one location and is 0.001." This statement is assumed to be a typographical error as a) specific storage should have units of 1/length (e.g., 1/m) and b) a value of 0.001 is reasonable for S (which is a dimensionless quantity) for a sandstone aquifer but is 2 to 4 orders of magnitude too high for a reasonable specific storage value in a confined sandstone. This value is therefore assumed to represent the measured value for storativity and was therefore assigned to the Grant/Pool aquifer system model.

4.3 Predictive Simulations

The predictive models were set up with a ~6-month (182-day) stress period with active pumping and a ~9-month (270-day) recovery period with no pumping. Pumping was applied to each of the rig site locations shown in Figure 1-1 at 183.516 m^3/d, which is the rate required to produce a total of 33,400 kL over a 182-day period.

5.0 Model Results

Model results are presented as mapped drawdown contours with a minimum contour of 0.2 meters and a 0.2-m contour interval. Drawdown is defined as the change in water levels within the aquifers (i.e., below ground surface) that results from pumping of the proposed production wells. The value of 0.2 was chosen for the minimum because normal seasonal fluctuations are likely on the order of 0.2 to 1 m; therefore, any values less than 0.2 m are likely not significant

relative to natural variations. Locations of known existing bores within and near the project site are also shown on the maps of model results to determine potential impact to existing bores.

Figure 5-1 shows modeled drawdowns at the end of the 6-month pumping period for Mod 1. Modeled drawdowns at the pumping bores range from 7.3 m to just under 8 m. The radius of the 0.2-m drawdown contour for each bore is within 500 m of each pumping bore. All 0.2-m drawdown contours are greater than a kilometer from any existing bores in the project area. Mod 1 indicates that production of the required volumes of water should not result in any observable impacts to existing bores.

Figure 5-2 shows modeled drawdowns at the end of the 6-month pumping period for Mod 2. The 0.2 m contour interval extends throughout much of the project site and encompasses two of the known existing bores in the project area. Model-predicted drawdowns at those bores range from 0.2 to 0.3 m, which is smaller than the normal seasonal variations in water levels and which represents a very small percentage of the available water column in each bore. Drawdowns in the bores that exceed 0.2 m recover to residual drawdowns between 0.08 and 0.16 m within nine months of the end of pumping.

An additional set of predictive model simulations for both Mod 1 and Mod 2 were performed with pumping only applied to the Muspelheim well location (labeled “Mus” on Figure 1-1). These simulations were performed to determine the radius of impact from an individual bore for each model. Model results are presented as distance-drawdown plots showing modeled drawdown after 6 months of continuous pumping at 183.516 m^3/d. Model results are presented in **Figure 5-3**. As indicated by **Figure 5-3A**, modeled drawdowns for Mod 1 (Liveringa aquifer) are 0.2 m at about 350 m from the pumping well, less than 0.1 m at just over 400 m from the pumping well, and less than 3E-06 m at 1,000 m from the pumping well. Model-calculated drawdowns in the Liveringa within 1-km of the Mus well for the single pumping well simulation are identical to the drawdowns from the simulation with all well locations pumping, which indicates that production from the rig supply bores at the expected rates will not result in inter-well drawdown interference. As indicated by **Figure 5-3B**, modeled drawdowns for Mod 2 (Grant/Poole aquifer) are 0.2 m at 3.25 km from the pumping well and 0.1 m at just over 10 km from the pumping well (Figure 5-3B).

The model results presented in Figures 5-1 through 5-3 suggest that the Liveringa aquifer should experience greater drawdowns at each well but with a much more limited extent of drawdown impact in the aquifer as compared to the Grant/Poole aquifer. This is consistent with the assumptions built into the model, as the Grant/Poole aquifer is expected to have a much higher hydraulic conductivity (which would result in less impact at the pumping wells) with a much lower storage coefficient associated with confined condition (which would result in a greater areal extent to drawdown impacts). In general, this result is expected as drawdowns in an unconfined aquifer (like Mod 1) are related to the production wells temporarily draining water out of the aquifer pore space right next to the well while production wells in a confined aquifer (like Mid 2) are temporarily depressurizing the aquifer, which will affect a larger area but result in smaller drawdowns at the actual wells.

6.0 Modeling Limitations and Sensitivity Analysis

The objective of the modelling presented here is to simulate pumping-induced drawdowns in an aquifer given a relatively short-term pumping period (~6 months) and general assumptions about the aquifer input parameters. The modelling software used for the simulations (MODFLOW) is an industry standard program that has been developed over 4 decades and that has been verified as an appropriate tool for simulating aquifer drawdowns in response to pumping.

A review of available literature and other data on the geology and hydrogeology of the study area indicates that there are two potential target aquifers at the site – the unconfined Liveringa and the underlying confined Grant/Poole. There is a considerable amount of uncertainty about groundwater conditions, boundary conditions, and aquifer parameters and parameter variability at the site, which in turn creates predictive uncertainty in the models. The uncertainty associated with critical aspects of the model and the approaches used for dealing with that uncertainty are discussed here.

6.1 General Modelling Approach

The total pumping demand built into the model assumes ten (10) rig supply bores each producing a given amount (33,400 kL) over a time period intended to represent the time required to install the associated hydrocarbon exploration bores (6 months) at each wellsite. For all simulations the modelling assumes that all 10 rig supply wells start pumping at the same time and operate concurrently for the same 6-month period. This is considered to be a conservative approach that results in a "worst-case" pumping application scenario as the actual exploration bores will likely be installed in stages over a multi-year period, which in turn would mean that rig supply bores will come on- and off-line over an extended period. This conservative approach helps to mitigate the uncertainty associated with other model inputs as the simulations are applying a much greater stress to the aquifer than what it will actually experience.

The system was modelled with individual one-layer models for each aquifer system rather than an integrated multi-layer model with some limitations on vertical inter-formational flows (e.g., an aquiclude or vertical anisotropy). The primary reason for this is because there is not enough available information in the literature and existing data to characterize inter-formational flows and verify that a modelling approach is adequately simulating reality. Using individual one-layer models and applying all expected pumping to each model results in a more conservative model as any interformational flows would likely result in additional water moving into the pumped formation, which in turn will reduce modelled drawdowns. This approach is therefore considered to be a conservative approach that will overstate actual aquifer drawdowns.

6.2 Boundary Conditions

Estimates of aquifer recharge to the unconfined system are available for the study area (see Section 3); however, there is considerable uncertainty associated with those estimates. Since applying recharge to the unconfined model would result in reductions to the modelled drawdowns, recharge was not included in the final modelling to create a more conservative estimate of predictive drawdowns.

Other model boundary conditions, such as the constant head cells to the south and west and the lateral no-flow boundaries to the northeast and southwest are positioned far enough from the Development Envelope that they do not have any notable impact on drawdowns within the study area.

6.3 Aquifer Parameters

Mod 1 assumes unconfined aquifer conditions; therefore, the hydraulic conductivity (K) and the specific yield (Sy) are the key aquifer parameters for that model. Mod 2 assumes confined aquifer conditions; therefore, the transmissivity (T) – which is the product of the hydraulic conductivity and the saturated thickness – and the storativity (S) – which is the product of the elastic storage coefficient and the saturated thickness – are the key aquifer parameters for that model. Estimates of appropriate values for these parameters, as derived from the available literature, are presented in Section 4.

The estimates presented for K and T in each aquifer system are broad ranges of values that cover several orders of magnitude. For the storage parameters there are very few estimates that generally cover typical values for the aquifer conditions and lithologies present at the site. The uncertainty associated with aquifer parameters is addressed through a model sensitivity analysis that involves a large number of simulations with variations in permeability, storage parameters, and pumping rates, with results presented as drawdown statistics for the proposed production bores and existing off-site bores.

6.3.1 Sensitivity Analysis – Mod 1

Table 6-1 shows a summary of the input values for the sensitivity analysis simulations for Mod 1. The input parameters varied include the total pumping rates, with four sets of pumping rates equivalent to 50%, 100%, 150%, and 300% of the expected rates described in Section 1 (183.52 m^3/d per well over 6 months); three sets of K values ranging from 1.0E-05 to 1.0E-01 m/d; and three sets of Sy values ranging from 0.01 to 0.3.

Sensitivity analysis results for Mod 1 are presented in Table 6-1. The column “Avg at Pumping Bores” in Table 6-1 contains the average modelled drawdowns at the actual pumping bores at the end of the pumping period in each simulation. As indicated on Table 6-1, drawdowns at the pumping wells are sensitive to variations in K with significantly larger drawdowns at the lower K values. For the simulations at 50% or 100% of expected pumping, the lower K models result in relatively large (~20-60 m) drawdowns at the pumping wells, however, these values are still less than the assumed initial saturated thickness (~170-185 m). There is some uncertainty in the actual saturated thickness at the site; however, even if it is half of the assume thickness (85-90 m) the modelled drawdowns from the models with 50-100% of expected pumping will not exceed the available.

At the highest pumping rates, the modeled drawdowns can be a significant fraction of available saturated thickness; therefore, greater pumping rates will only be sustainable if the K values are similar to those assumed for the models presented in Section 4 and 5.

For all 36 simulations the modeled drawdowns at each existing bore (see Figure 5-1 for existing bore locations) were 0.01 m or less, which is considered to be less than the resolvable precision of the model and is interpreted to indicate no impact from pumping on existing bores. This suggests that, even with the most conservative conditions, pumping from the proposed bores completed in the unconfined system will not result in any observable impacts to existing bores.

6.3.2 Sensitivity Analysis Results – Mod 2

Table 6-2 shows a summary of the input values for the sensitivity analysis simulations for Mod 2. The input parameters varied include the same ranges of total pumping rates; three sets of T values ranging from 10 to 1,000 m^2/d, and three sets of S values ranging from 1.0E-04 to 1.0E-02.

Sensitivity analysis results for Mod 2 are presented in Table 6-2. The column “Avg at Pumping Bores” in Table 6-2 contains the average modelled drawdowns at the actual pumping bores at the end of the pumping period in each simulation. As indicated on Table 6-2, drawdowns at the pumping wells are sensitive to variations in both T and S, though the differences in drawdowns at the lower values are not as significant as those indicated in Mod 1. Overall drawdowns at the pumping bores are not as extreme as those observed in Mod 1 and given that the expected completion depths for production bores in the Grant/Poole aquifer will be much deeper than those in the Liveringa (likely >200 m below ground level), the model simulations indicate that there will be sufficient available water column in the production bores for even the lowest expected aquifer parameters.

The columns containing "… at Existing Bores" in Table 6-2 contain general statistics for the modelled drawdowns at the existing bores shown in Figure 5-2. Drawdowns at existing bores are less than 4.5 m for all simulations at 50-100% of expected pumping, with all models but the lowest S values resulting in drawdowns less than 1 meter. The models indicate that the greatest sensitivity is to storativity, with the lowest S values generally resulting in drawdowns greater than a meter throughout the Development Envelope. These results indicate that there could be some risk of impact to existing bores if the actual aquifer parameters in the Grant/Poole are much lower than expected; however, those impacts will certainly be minimized if pumping from the production bores is distributed over time as expected.

7.0 Conclusions and Proposed Future Work

The results of Mod 1 indicate that production of the required water volumes from the Liveringa Group will not result in any noticeable impact to existing bores at the project site. The nearest GDE (Mt. Hardman Creek) is also too far from the nearest proposed rig site to experience any significant impacts from the proposed project.

The results from Mod 2 indicated that production of the required water volumes from the Grant/Poole aquifer system would potentially induce temporary drawdowns between 0.2 and 0.4 m on a small number of existing bores at the project site. These drawdowns will likely recover within a year after the end of the pumping period. The impacts represent a very small percentage of the available water column in each bore and would likely not induce any practical impact on the operation of the existing bores.

Hydraulic heads in the Grant/Poole system are higher than those in the overlying Liveringa, which suggests that there could be vertical upward flow of groundwater between the two systems. The evaluations presented by Harrington et al. (2011) also indicate that there is some flow moving up along fault zones and discharging into the Fitzroy River. There is insufficient data to adequately model any interactions between the two aquifer systems; therefore, this was not included in the modeling analysis. Due to the short-term nature of the proposed pumping and the relatively small impacts on each aquifer from pumping within each aquifer, it is unlikely that there would be significant cross-formational impacts from pumping in either aquifer.

Sensitivity analysis of the critical input parameters for Mod 1 indicates that there is very little risk of pumping from the Liveringa affecting any existing bores; however, the aquifer may not be able to support production at higher pumping rates. All Mod 1 sensitivity analysis simulations resulted in modeled drawdowns at the existing bores that are so small they are likely beyond the reasonable resolution of the modelling.

The Mod 2 (Grant/Poole aquifer) sensitivity analysis indicates that the aquifer should not have any problem supplying the required water even at 3 times the expected rates; however, the Grant/Poole aquifer model is sensitive to variations in model storativity and lower than expected storativity in the actual aquifer could result in existing bores temporarily experiencing 1 to 15 m of drawdown by the end of the 6-month pumping period. Drawdown contours were not generated for each of the sensitivity analysis simulations; however, the drawdown statistics presented in Section 6 indicate that typical drawdowns at existing wells for the 100% demand simulations are much less than 1 meter for all but the most restrictive input parameters.

Groundwater levels at each site are generally within 5-45 m of ground surface and each aquifer should have well over 100 m of saturated thickness (i.e., water level in wells above the base of the aquifer) available for drawdown. The modeled drawdowns for all sensitivity analysis

simulations, therefore, are expected to be a small percentage of the available drawdowns, which in turn indicates that the modelled impacts are relatively small.

The analysis presented here is conservative for several reasons:

- The modeling approach assumes that to all rig supply bores pumping concurrently, which will likely not happen as construction of the wells will likely be staged over time.
- The required pumping involves producing a finite volume of water over a relatively short period of time. Any observed impacts at existing pumping bores should recover to pre-pumping rates within a year of the end of pumping.
- Recharge is not included in any of the model simulations. Adding recharge to the system would reduce modeled impacts from pumping.
- The models assume that all pumping is applied to either the Liveringa or the Grant/Poole. If the required pumping is distributed between the two formations, the overall impacts to each formation will be reduced.

The modeling presented here was developed using data and information from the literature with no site-specific testing or investigations. Aquifer testing, including step-drawdown and constant rate pumping tests, should be performed on each of the groundwater extraction bores shortly after installation and development are completed. If possible, at least one monitoring bore should be installed close enough to a production bore to allow for at least one multi-bore aquifer test to establish storage parameters at the site. The results of site-specific testing should then be used to refine the model calculations and develop more reliable estimates of future impacts at the site.

1 Executive summary

This Groundwater Management Plan (GWMP) has been prepared by Bennett Resources (BNR) to support the assessment, approval and implementation of the Valhalla Gas Exploration and Appraisal Program (the Proposal) under Part IV of the *Environmental Protection Act 1986* (EP Act).

Bennett Resources referred the Proposal to the Environmental Protection Authority (EPA) under Part IV of the EP Act on 24 December 2020 (EPA Assessment Number 2281). The EPA has decided to assess the Proposal as Public Environmental Review. The Environmental Review Document (ERD) is to include environmental impact assessment (EIA) and management information, including this environmental management plan (EMP), which will be subject to an eight-week public review period.

This GWMP has been written in accordance with the guideline "Instructions on how to prepare Environmental Protection Act 1986 Part IV Environmental Management Plans" (EPA 2021). An executive summary of this GWMP is provided in Table 1-1.

Table 1-1: Executive summary of the GWMP

Proposal title	Valhalla Gas Exploration and Appraisal Program (EPA Assessment Number 2281)
Proponent name	Bennett Resources Pty Ltd
Ministerial Statement number	The Proposal is currently being assessed by the EPA (Assessment 2281) and a Ministerial Statement and associated proposal implementation conditions are yet to be issued.
Purpose of the GWMP	The purpose of this GWMP is to detail the monitoring requirements along with response actions for trigger and threshold criteria that are required for the Proposal.
EPA key environmental factor and objective, and GWMP outcomes	**Inland Waters – EPA objective:** *To maintain the hydrological regimes and quality of groundwater and surface water so that environmental values are protected.* GWMP outcomes: • no long-term changes to groundwater levels • no short or long-term changes to groundwater quality.
Condition clauses	No Ministerial Statement at the time of preparing the GWMP.
Key components in the GWMP	The key components of this GWMP are: • baseline groundwater monitoring: which refers to the measurement of groundwater levels and collection of groundwater samples to determine water quality prior to the commencement of proposed activities. • surveillance groundwater monitoring: which refers to monitoring that occurs after commencement of an activity and is not considered to be representative of 'baseline 'conditions. Any data collected after commencement of a petroleum activity should be directly compared to baseline data and relevant standards to determine whether changes have occurred. • trigger and threshold criteria and subsequent response actions • annual reporting (including results of monitoring).
Proposed construction / commencement date	TBC – within Calendar Year 2024.
EMP required pre-construction / commencement?	Yes ☒ No ☐

2 Context, scope and rational

2.1 Proposal

The Proposal is to complete an unconventional exploration and appraisal drilling and Hydraulic Fracture Stimulation (HFS) program within Petroleum Exploration Permit EP 371 (EP 371) in the Canning Basin, within the Shire of Derby / West Kimberley in Western Australia (WA). The intent of the Proposal is to evaluate the large tight gas resource in the region which has the potential to offer long-term energy security to Australia. The onshore Canning Basin is an early Ordovician to early Cretaceous aged geological basin that covers approximately 430,000 km^2 in the West Kimberley region. The Proposal is targeting hydrocarbons present from the Laurel through to the Devonian Formations, ranging from 2,000 m to 5,000 m below ground level. The main target is the Laurel Formation, with hydrocarbons present at depths between 2,000 m and 4,000 m below ground level. Table 2-1 provides a summary of the proposal.

Table 2-1: Summary of the Proposal

Proposal title	Valhalla Gas Exploration and Appraisal Program (EPA Assessment Number 2281)
Proponent name	Bennett Resources Pty Ltd (BNR)
Short description	The Proposal is to undertake an unconventional exploration and appraisal drilling program within EP 371, located in the Canning Basin, West Kimberley of Western Australia. The Proposal involves constructing up to 20 exploration wells within 10 well sites. The intent of the Proposal is to further explore and appraise the extent of the tight gas reservoirs present from the Laurel through to the Devonian Formations, at depths ranging from 2,000 m to 5,000 m below ground level. The exploration and appraisal program are expected to commence in 2024.

2.2 Key environmental factors

Two key elements have been identified as having the potential to affect the Key Environmental Factor – Inland Waters. These are:

- water abstraction for process water and camp supply
- gas exploration method (unconventional).

A summary of the Inland Waters environmental factor with a specific focus on these elements and subsequent impacts relating to this activity is included below in Table 2-2.

Table 2-2: Summary of key environmental factor – Inland Waters

EPA objective	To maintain the hydrological regimes and quality of groundwater and surface water so that environmental values are protected.
Policy and guidance	• Environmental Key Factor Guideline – Inland Waters (EPA 2018) • Australian and New Zealand Environment and Conservation Council (ANZECC) Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZECC and ARMCANZ 2018) • Department of Water – Water Quality Protection Notice 26 (liners for containing pollutants, using synthetic membranes) (DoW 2013) • Department of Mines and Petroleum (DMP) / Department of Water (DoW). Guideline for groundwater monitoring in the onshore petroleum and geothermal industry (DMP & DoW 2016).
Project activities	• water abstraction for process water and camp supply • gas exploration method (unconventional).
Environmental values / receptors	• Liveringa and Grant Group (including Poole Sandstone and Reeves) Aquifers • the Groundwater Dependent Ecosystem (GDE) Mount Hardman (associated with the Liveringa Aquifer) • other groundwater users (>18 km away from the Development Envelope).
Potential impacts – direct impacts	• changes to groundwater levels (groundwater drawdown) associated with water extraction • contamination of surficial aquifers due to lost circulation.

Potential impacts – indirect impacts	• contamination of aquifers through unplanned fracture heights • contamination of surficial aquifers from an accidental release at the surface of drilling fluids, HFS chemicals, liquid hydrocarbons or produced formation water.

2.3 Condition requirements

The Proposal is currently being assessed by the EPA (Assessment 2281) and a Ministerial Statement and associated proposal implementation conditions are yet to be issued. Should this Proposal be approved for implementation, any conditions relating to this GWMP will be included in this section.

2.4 Rationale and approach

This section provides a concise description of the rationale and approach for this Plan. Specifically, the following sub-sections summarise:

- the site-specific environmental values, existing and/or potential uses, ecosystem health condition or sensitive component of the key environmental factor which will be affected (Section 2.4.1)
- study findings (Section 2.4.3)
- key assumptions and uncertainties (Section 2.4.4)
- management approach (Section 2.4.5)
- rational for choice of indicators (Section 2.4.6).

2.4.1 Receiving environment

The Development Envelope is situated in the Canning Basin region within the Fitzroy River catchment. The Canning Basin is considered the second largest groundwater resource in Australia after the Great Artesian Basin. It is a large sedimentary basin covering an onshore area of more than 450,000 km^2 (DoW 2012). The major regional aquifer systems in the Canning Basin are (in order of decreasing age):

- Grant Formation
- Liveringa Formation
- Wallal Sandstone
- Broome Sandstone.

Data from three petroleum wells drilled within the Development Envelope by the previous operator of EP 371 provides a detailed two-dimensional cross section of the aquifers located within the Development Envelope. Specifically, the major aquifers that are present within the Development Envelope include the:

- Liveringa aquifer
- Grant Group (including the Reeves aquifer) and Poole Sandstone aquifers.

A detailed summary of these aquifers with reference to local data has been provided in the Environmental Review Document for the Proposal (BNR_HSE_MP_013) and has not been duplicated here. However, a summary of the values of these aquifers is provided in Table 2-3 and Table 2-4.

Water quality of the Liveringa aquifer within the Development Envelope is well understood given the sampling programs that have been conducted for previous petroleum activities within EP 371.

Data provided from the Yungngora Community (over the past 4 years) and Fitzroy Crossing public drinking water source area reserve have been used to inform the water quality of the Poole Sandstone aquifer. These were selected as they are the closest groundwater users that extract water for potable drinking purposes. The Poole Sandstone aquifer is hydrogeologically similar to and considered to be part of the Grant Group (which also includes the Reeves aquifer).

Information regarding the aquifer quality of the Liveringa and Grant Group/Poole Sandstone aquifers is provided in the ERD and has not been duplicated here.

Table 2-3: Summary of Liveringa Aquifer values

Aquifer	Liveringa
Recharge mechanism	Rainfall on outcrop areas
Connectivity with other aquifers	Limited – underlain by the Noonkanbah (shale) Formation that is considered an aquitard, and is ~357 m thick
Number of baseline samples and duration of program	At least 21 samples (per bore) over 5 years
Number of groundwater licences within the Development Envelope	4
Regional use	• unlicensed livestock bores • main roads • oil and gas.

Table 2-4: Summary of Grant Group Aquifer values

Aquifer	Grant Group (including Reeves) and Poole Sandstone
Recharge mechanism	Rainfall on outcrop and shallow outcrops (none present within the Development Envelope)
Connectivity with other aquifers	Limited – underlain by the Anderson (shale) Formation that is considered an aquitard and is ~184–279 m thick
Number of baseline samples and duration of program	At least 5 samples (per bore) over 3 years
Number of groundwater licences within the Development Envelope	One, however, there are no known extraction bores.
Regional use	• oil and gas operators • mining operators • main roads • unlicensed for uses such as livestock and domestic bores • potential tourist operations • Indigenous community bores.

2.4.2 Environmental outcomes

The overall purpose of this GWMP is to quantify the potential environmental impacts and risks associated with the Proposal activities on inland waters. In meeting this objective, BNR will be able to verify the outcomes of the ERD which state that the impacts and risks are not significant given the manner in which the Proposal is planned to be implemented.

Based upon the groundwater monitoring program selected for the Proposal (Section 3.1), an outcome-based approach has been selected given the ability to collect quantitative data that enables unbiased scientific analysis to be completed. Further to this, the quantitative groundwater indicators for this GWMP have been based on baseline regional and local data, enabling outcomes to be selected for the Proposal.

Consequently, the following outcomes have been defined for this GWMP:

- No long-term changes to groundwater levels
- No short or long-term changes to water quality.

2.4.3 Study findings

To inform the impact assessment associated with groundwater drawdown to other groundwater users and the Mount Hardman Creek GDE, BNR utilised a study by Rockwater (2016) that considered groundwater drawdown associated with HFS water abstraction within the Development Envelope. To complete the drawdown modelling,

Rockwater utilised Modflow Pro version 8.0.45, which incorporates MODFLOW, a groundwater modelling software designed by the US Geological Survey (McDonald and Harbaugh 1988). The model was set up with a rectangular grid of 57 rows, 57 columns and two layers covering an area of 5 km by 5 km centred on a single production bore. Layer 1 extends to 50 m depth, and Layer 2 to 170 m depth. Model cell sizes range from 25 m by 25 m near the production bore, to 100 m by 100 m in peripheral areas.

The model was set up initially with parameters that are typical of a minor aquifer such as the Liveringa but was calibrated with drawdown data observed during field monitoring. The model was run to predict groundwater level drawdowns arising from pumping a bore over a six-month period at the average rate required to produce 33,400 kL. The calculated drawdowns after six months of extraction are shown for each model layer in Figure 2-1. Modelling predicted that drawdowns of 1 m or more could extend up to 410 m from a production bore at the (deep) level of the screens in the production bore, but that there would be smaller drawdowns in the top 50 m of the Liveringa formation: 1.2 m close to the bore decreasing to 1 m at a distance of about 56 m from the bore, and 0.1 m at 690 m distance. Although the modelling is based on assumed parameters and the results are not unique, the calculated drawdowns are consistent with monitoring on the bores at the Valhalla North 1 and Asgard 1 well sites, where drawdowns at shallow depths (albeit with lower pumping rates) have been very small, and difficult to distinguish from normal seasonal fluctuations of about 0.2 to 1 m (depending on the frequency and magnitude of recharge events). For an overview of groundwater depth over the course of historic groundwater monitoring, refer to Appendix H of the Environmental Review Document (BNR_HSE_MP_013).

Using an extraction volume of 100,000 kL (100 ML) (which is the conservative maximum extraction for a Phase II well for the Proposal), the model predicted that a short-term drawdown of 1 m or more could extend up to 780 m from the extraction water bore at the (deep) level of the screens in the extraction bore (Rockwater 2016)). The model predicted that even with pumping for the maximum volume of 100 ML, groundwater levels would be expected to recover rapidly to within 0.2 m of baseline levels within hours of stopping extraction and to fully recover within weeks.

This model was not considered to be sophisticated enough and the potential for a drawdown of up to one metre raised concern through discussions with DWER. Therefore, additional modelling work was commissioned from Intera Geosciences Pty Ltd. MODFLOW 2005 was used to complete a detailed quantitative model to better understand groundwater drawdown. The Groundwater Vistas (ESI) modelling software was used to develop the input files, run the model executables and process model output. Two primary models were developed, one simulating the unconfined Liveringa Group (Mod 1) and one simulating the Grant/Poole aquifer system (Mod 2). A full explanation of the modelling approach is contained in annex to this management plan.

Model results are presented as mapped drawdown contours with a minimum contour of 0.2 metres and a 0.2 metre contour interval, which was chosen as normal seasonal fluctuations can range between 0.2 metres and one metre, so any values less than 0.2 metres are likely not significant relative to natural variations.

The modelled drawdown at the end of the six-month pumping period for Mod 1 showed the radius of the 0.2 metre drawdown contour was within 400 metres of each pumping bore, so would have no impact on any existing bores or groundwater systems.

The results from Mod 2 were similar, with predicted drawdowns of up to 0.4 metres, which is expected to be difficult to distinguish from normal seasonal variations in water levels of 0.2 – 1 metre (Rockwater, 2016).

Note, this means that the short-term drawdown will have less effect on the environment than seasonal fluctuations, given a maximum drawdown of between 0.2 and 0.4 metres and a recovery to 0.1 metre within one year of the cessation of pumping.

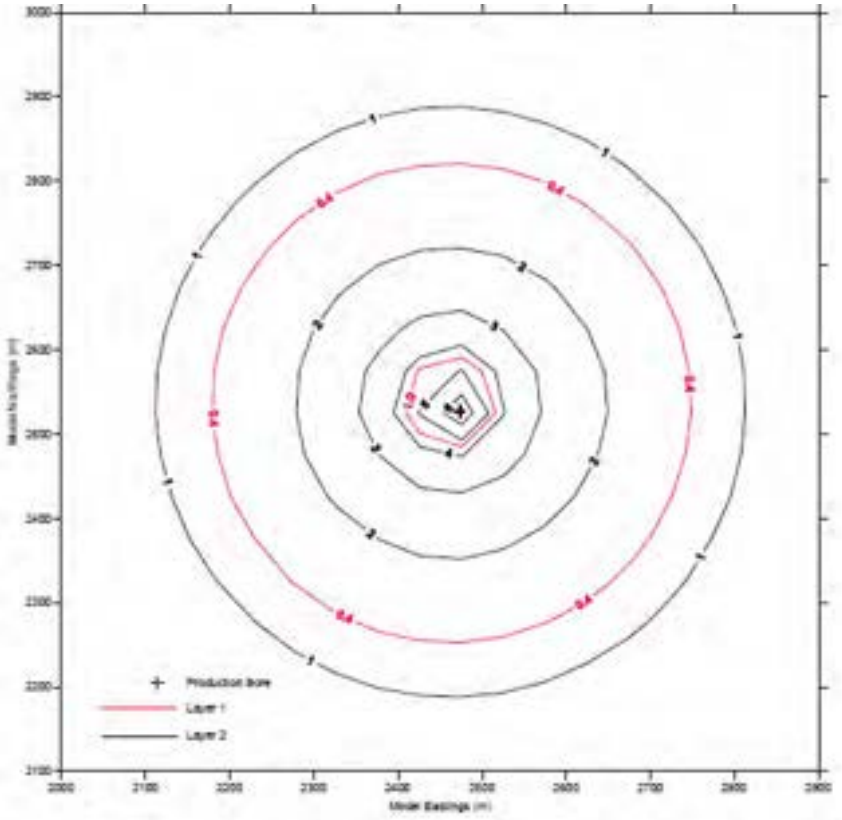

Figure 2-1 Drawdown contours associated with the extraction of 33,306 kL (Rockwater model)

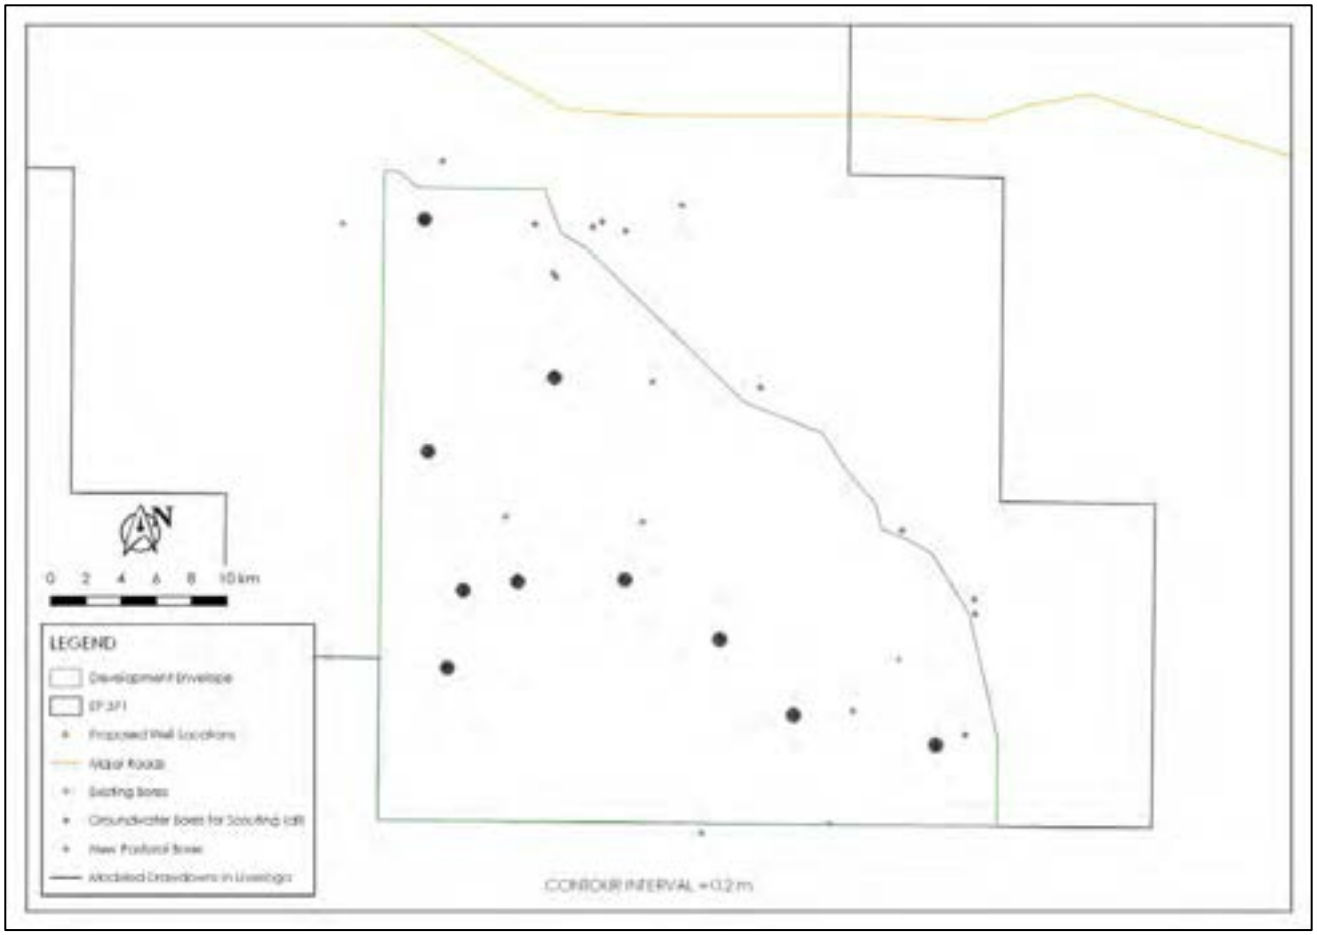

Figure 2-2: Mod 1 model results presented as drawdown contours after six months of pumping, with contour interval = 0.2 metres (Intera model)

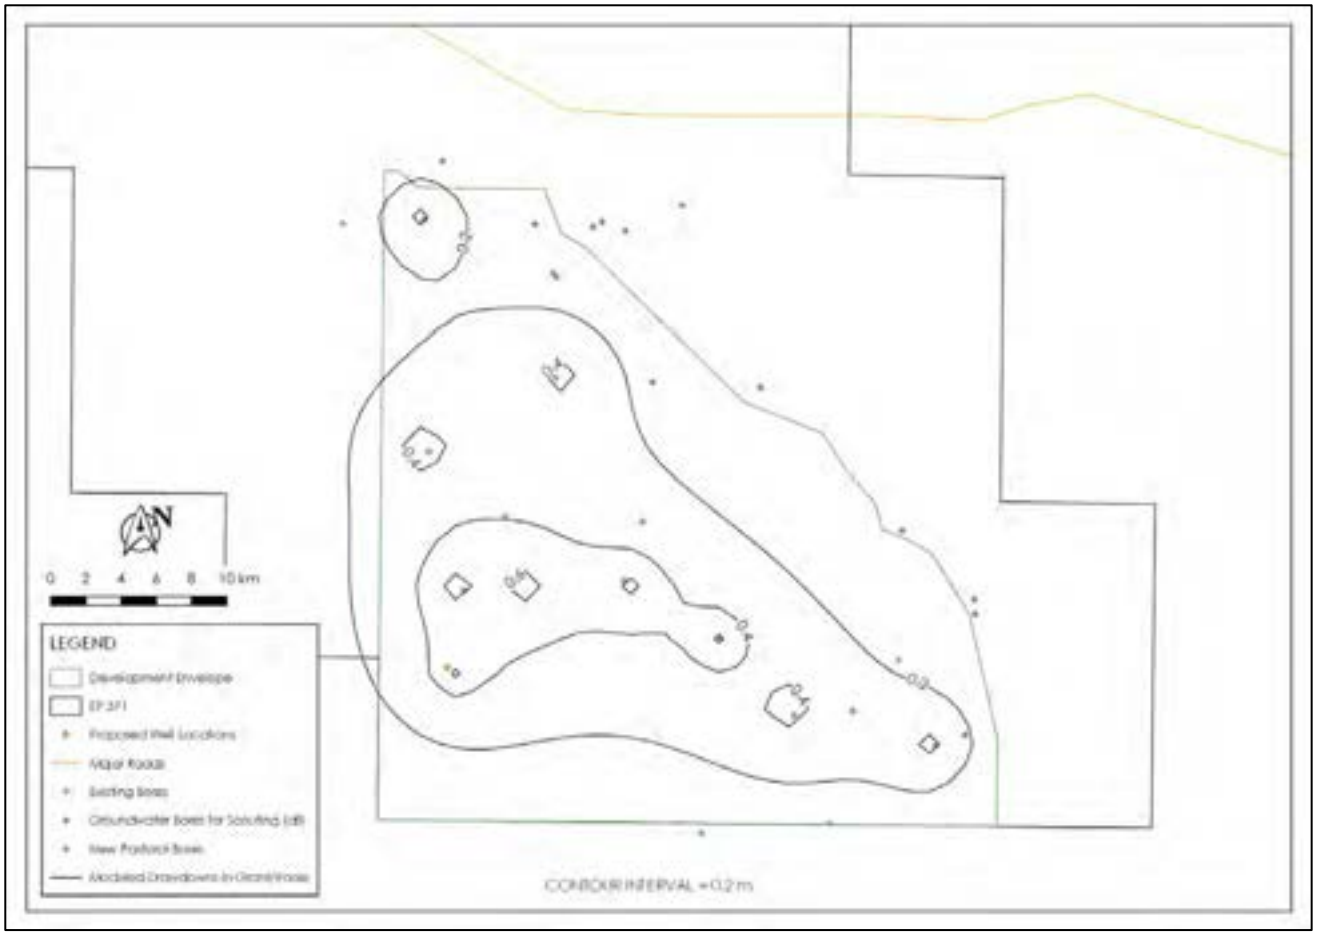

Figure: Mod 2 model results presented as drawdown contours after six months of pumping with contour interval = 0.2 metres (Intera model)

The results from Mod 1 indicate that abstraction of the required water volumes will not result in any noticeable impact to existing bores, and that the nearest GDE (Mount Hardman Creek or the Fitzroy River) are too far to experience any significant impacts.

The results from Mod 2 indicate that abstraction of the required water volumes from the Grant/Poole aquifer system would potentially induce temporary drawdowns of between 0.2 and 0.4 metres, and that these would likely recover within a year after the end of the pumping period. The impacts represent a very small percentage of the available water column in each well and would likely not induce any economic impact on existing wells.

Note, this model was considered conservative, as it assumed all rig supply bores to pump concurrently, which was unlikely to happen. In addition, recharge was not included in any of the model simulation.

2.4.4 Key assumptions and uncertainties

In accordance with EPA (2021), key assumptions or parameters that are used to support any numerical modelling are to be described in the GWMP. Specifically, key assumptions and uncertainties used in numerical groundwater modelling to understand the potential for water level drawdown associated with the Proposal are detailed in Table 2-5.

Table 2-5 Key assumptions and uncertainties

Number	Assumptions and Uncertainties	Comment
1	Number and location of extraction bores	BNR plans to install two extraction bores at each well site. Although modelling is based upon a single bore, abstraction bores are anticipated to either alternate or draw with reduced rates such that modelling from a single bore provides a conservative worst-case scenario.
2	Volume of water required to be extracted for the Proposal	The conservation maximum volume of water per well site is estimated to be 100 ML. Modelling volume was less (33 ML) but on review of a much larger number provided in Rockwater (2016) (100 ML), the modelling outcomes are expected to be sufficient to inform the EIA.

2.4.5 Management approach

BNR plans to implement outcome-based indicators under this GWMP. This approach has been determined to be the most appropriate as the outcome can be readily measured with clear thresholds set to enable a level of protection to be achieved.

2.4.6 Rationale for choice of indicators and/or response actions

The indicators proposed are based on the following rationale:

- groundwater modelling indicates that the Liveringa aquifer is in a state of dynamic equilibrium
- groundwater modelling indicates that a drawdown of groundwater is not expected to result in a significant impact to sensitive receptors or other users within proximity of the Proposal
- establishment of outcome-based indicators is achievable, and monitoring of groundwater parameters provide a direct insight into any potential environmental impact arising from the Proposal
- the adaptive management framework enables for clear decisions regarding water extraction to be made where any impacts may be observed. Where additional mitigation is implemented, the timeframe for mitigation to take effect is expected to be relatively short given the dynamic nature and throughflow of groundwater in the region.

A summary of the specific indicators and their justification is provided below.

Groundwater Quality

The DMP and DoW guideline (2016), details a comprehensive list of analytes that is standard for onshore oil and gas projects in WA. Specifically, the guideline recommends that the following criteria be sampled:

- in-field parameters, including water level and dissolved oxygen
- physico-chemical parameters
- ions, including chloride and sulfate
- total metals, including arsenic and chromium
- dissolved gases
- benzene, toluene, ethylbenzene, xylene, naphthalene
- other hydrocarbons.

As the Scientific Inquiry states: An enforceable Code of Practice should include the requirement to test for, and assess the risk from, a comprehensive list of analytes in groundwater, produced and flowback water, including geogenic chemicals and radon, BNR has taken to include the following analytes to be included in the sampling plan:

- radon
- uranium

- geogenic chemicals.

To understand the specific Indicators or Constituents of Potential Concern (CoPC), BNR reviewed the potential environmental impacts and risks as detailed in the Valhalla Gas Exploration and Appraisal Program, Section 38 Assessment – Environmental Review Document (BNR_HSE_MP_013). The Proposal indicates the following fluids as having the potential to impact water quality:

- surface release of drilling fluids and HFS fluids
- subsurface release of drilling fluids
- subsurface release of HFS fluids.

On this basis, the following analytes have been identified for the Proposal to be used as indicators of spill events:

- barium
- cadmium
- chloride
- chromium III
- sulfate
- Total Petroleum Hydrocarbons (TPH)

BNR reviewed the Assessment and Management of Contaminated Sites: Contaminated Sites Guidelines (DER 2014), to identify various health screening levels (Table 2-6). However, given the absence of health screening levels for most constituents, BNR has opted to utilize a before and after impact analysis for the data of these indicators. This ensures that should local geology impact water quality, the collection of baseline samples will enable historic averages to be collected and simple average / standard deviation analysis be utilized to understand water quality variance.

Table 2-6: Groundwater Health Screening Levels

Analyte	Indicators
barium	-
cadmium	-
chloride	-
chromium III	-
sulfate	500 mg/kg (DER 2014)
TPH (C10-C14)	-
TPH (C15-C18)	-
TPH (C6-C9)	-

Groundwater Levels

As detailed in Section 2.4.3, groundwater levels fluctuate naturally between 0.2 to 1 m (depending on the frequency and magnitude of recharge events). For an overview of groundwater depth over the course of historic groundwater monitoring, refer to Appendix H of the Environmental Review Document (BNR_HSE_MP_013).

Consequently, BNR has adopted a trigger / threshold indicator of 1 m for groundwater level as historical data indicates natural variation of up to 1 m is present within the Development Envelope.

3 GWMP components

This section of the GWMP identifies the legal provisions (components) in Table 3-1 that BNR will implement to ensure that the environmental outcomes are met during the implementation of the Proposal.

In accordance with the guideline “Instructions on how to prepare Environmental Protection Act 1986 Part IV Environmental Management Plans” (EPA 2021), this section identifies the indicators that will be used to measure performance and the monitoring that will be undertaken in relation to these indicators. It defines the response actions (trigger level and contingency actions) that will be undertaken if the indicators are exceeded. Table 3-1 details the components of this plan, including monitoring and reporting commitments. Further information regarding monitoring has been described in Section 3.1.

BNR will update Table 3-1 in consultation with both the Department of Water and Environmental Regulations and the Department for Energy, Mining, Industry Regulation and Safety prior to implementation of any drilling activity. This will include the review of trigger and threshold criteria following the completion of wellsite specific baseline sampling.

Table 3-1: GWMP components

EPA factor/s and objective/s	**Inland Waters** – To maintain environmental quality and to minimise the risk of environmental harm, so that environmental values are protected			
GWMP outcome/s	• no long-term changes to groundwater levels • no short or long-term changes to groundwater quality			
Key environmental values	• Liveringa, Reeves and Grant Aquifers • the Groundwater Dependent Ecosystem (GDE) Mount Hardman (associated with the Liveringa Aquifer) • other groundwater users (pastoral stations and fixed receptors >18 km away from the Development Envelope).			
Key impacts and risks	• changes to groundwater levels • contamination of groundwater from surface and subsurface spills			
Indicators	**Response actions**	**Monitoring**	**Frequency**	**Reporting (Section 0)**
GWMP outcome – No long-term changes to groundwater levels **Trigger criteria** Groundwater level measured at defined monitoring locations (Table 3-2) exceed historical average groundwater level values of 0.7 m.	**Trigger level actions** • determine whether the water quality changes observed in the impact sites are comparable to baseline sampling [Note 1] • identify the reason for the change in water quality or groundwater levels and determine direct correlation to the Proposal activities or natural variation and review management measures with an adaptive management response. This may include cessation of groundwater pumping until levels return to their historical average levels and an increase in data collection and monitoring • re-examine water quality or groundwater level monitoring results (QA / QC) to validate data • where the threshold exceedance was not caused by the Proposal, resume standard water quality or groundwater level monitoring frequency • where the water quality or groundwater level threshold exceedance was caused by the Proposal, take steps to remedy the impact (for example cessation of pumping) re-monitor and increase monitoring frequency to monthly. **Threshold contingency actions** Initiate implementation of contingency measures including: • ground truth the water quality monitoring results to validate findings of the assessment and/or determine/identify what may be causing the exceedance. Where cause is identified during ground truthing and can be rectified, undertake action immediately. For actions which require alternate resources, schedule works to be undertaken as soon as possible	Refer to section 3.1	Refer to section 3.1	Routine reporting – Annual Compliance Assessment Report to the DWER Compliance Brach Exceedance reporting to DWER Compliance Branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.
Threshold criteria When the groundwater level, measured at defined monitoring locations (Table 3-2), exceed historical average groundwater levels of 0.7 m over two consecutive monitoring events which are attributable to the Proposal.				

GWMP outcome – No short or long-term changes to groundwater quality	**Trigger criteria** Changes to groundwater quality at defined monitoring locations (Table 3-2) attributable to the project where they meet the following conditions: • 2 out of 3 successive samples fall outside the mean ± 1 Sigma (SD) limit • 4 out of 5 successive samples fall outside the mean ± 1 Sigma (SD) limit • 8 consecutive points on the same side of the mean. **Threshold criteria** Changes to groundwater and surface water quality at defined monitoring locations (Table 3-2) attributable to the project where they meet the following condition: 1 sample falls outside the mean ± 2Sigma (SD) limit.	• where the water quality or groundwater level threshold exceedance was not caused by the Proposal, resume standard monitoring frequency • where the threshold exceedance can be attributed to the Proposal activities: o implement adaptive management response (modified abstraction) management guidance within Section 4. This may include: • for groundwater level - ceasing abstraction, and sourcing water from other sources or reducing abstraction volumes • for groundwater quality - ceasing the petroleum activity to enable source of release to be investigated and mitigated o once response actions have been completed, extend the monitoring program and increase to monthly until groundwater quality and level values recover o continue to implement actions to remediate the exceedance until approval to cease has been given by the relevant regulator.	Refer to section 3.1	Refer to section 3.1	Routine reporting – Annual Compliance Assessment Report to the DWER Compliance Brach Exceedance reporting to DWER Compliance Branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.

Note 1: Historical (regional) data available for both the Liveringa and Grant aquifers indicates that groundwater chemistry influenced by the geology is stable with limited variability over the sampling lifetime. Consequently, BNR will compare the variation of regional data with six-months of local baseline data to validate the expectation that the groundwater chemistry at the wellsites is comparatively stable with limited variance. This will be completed using a control charting methodology utilising key constituents, which will be:

- barium
- cadmium
- chloride
- chromium III
- sulfate
- Total Petroleum Hydrocarbons (TPH)

Regional data will be utilised to determine long-term geochemistry variation (mean and utilising standard deviation analysis), this will then be applied to local baseline data. Where the variance is not statistically significantly different to variance displayed by regional constituents, the drilling activity (and surveillance sampling) may commence. Where variance is statistically significantly different to regional constituents an additional six months of local baseline sampling will be implemented (and the control chart methodology repeated following completion of the additional six-month sampling program). On completion of this variance analysis, a report will be sent to DWER and DEMIRS seeking endorsement for BNR to cease baseline sampling and commence the activity (and surveillance sampling).

3.1 Groundwater monitoring program

To clearly understand if the indicators (trigger and threshold criteria) have been met or exceeded, BNR has developed a groundwater monitoring program (Table 3-2) to be implemented over the life of the Proposal and following decommissioning/site reinstatement. This includes groundwater monitoring. Specifically, the monitoring program will be used to:

- establish if local site conditions are unique to those established by historic control sites (prior to well activities commencing) this will be achieved by constructing at least two monitoring bores at each well site, in addition to one monitoring bore into the Grant aquifer in the project area and collecting data prior to drilling of wells. These data will be analysed in conjunction with already held data from the Yungngora Community bore (YG2/18) and the four former Buru monitoring bores discussed in the ERD to establish updated baseline data
- establish duration and frequency of surveillance monitoring prior to well construction, for the duration of the Proposal and following decommissioning
- inform termination criteria for groundwater sampling.

Table 3-2: Groundwater monitoring program

Overview	BNR has developed this monitoring program to collect and analyse local groundwater quality at all well sites associated with the Proposal located within the Development Envelope.
Relevant guidelines	• Guidelines for groundwater quality protection in Australia: National Water Quality Management Strategy, Department of Agriculture and Water Resources (Australian Government 2013) • National Water Quality Management Strategy. Australian and New Zealand Environment and Conservation Council / Agricultural and Resource Management Council of Australia and New Zealand (ANZECC / ARMCANZ) (Australian Government 2018) • Health screening levels for petroleum hydrocarbons in soil and groundwater. Technical report No. 10. Australian Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (Friebel and Nadebaum 2011) • Guideline for groundwater monitoring in the onshore petroleum and geothermal industry (DMP & DoW 2016) • Environmental Factor Guideline – Inland Waters (EPA 2018) • National Environment Protection (Assessment of Site Contamination) Measure 1999. Schedule B1, as amended 16 May 2013 (National Environment Protection Council 2013) • National Water Quality Management Strategy Australian Drinking Water Guidelines (NHMRC and NRMMC 2011 (updated March 2021)) • Contaminated Sites Groundwater and Surface Water Chemical Screening Guideline. Western Australian Department of Health (DoH 2014) • *Water Quality Protection Note 30* (WQPN 30), Department of Water (Western Australian Government 2006, updated August 2023) • Minimum Requirements for Water Bores in Australia (National Uniform Drillers Licensing Committee 2011).
Purpose	To determine if the Proposal has had any adverse impacts to groundwater quality and groundwater levels during its implementation.
Monitoring approach	**Sampling location:** • each well site will have two monitoring bores installed[1] for each location similar to that provided in Figure 3-1 that is : o one at least 10 m down-gradient of the produced formation water evaporation pond

[1] Installation and drilling of all water bores (including abstraction bores) will be hydrostratigraphically logged in detail and geophysical interpretation of groundwater quality collected, for the interval where fresh aquifers are known to be present (including through the Grant formation). Annulus seals and gravel packs will be used, where necessary, to isolate the zone being monitored and prevent potential cross contamination via the bore casing as required by the Minimum Requirements for Water Bores in Australia (National Uniform Drillers Licensing Committee 2011) required to be followed as detailed in the Groundwater monitroing in the onshore petroleum and geothermal industry guideline (DMP & DoW 2016). BNR will conduct validation water samples (along with QA/QC samples of any fluids / water used for the bore installation process) at a point of discharge from the circulation system to understand if cross contamination may be occurring as evidenced by fluid constituent presence associated with bore installation. This may involve the use of tracer dyes, but these specifics are subject to local conditions, aquifer depths and will be direct by a hydrogeologist during bore installation.

	o one further downgradient of the petroleum well, with the final location determined once site specific information has been gathered. They may be located up to one kilometre down gradient • the location of the bores has been selected to coincide with different perceived risks (i.e., a surface release from the evaporation pond) or a migration of fluids through a fault to the Liveringa Aquifer • the location of the bores will be identified in consultation with DWER and DEMIRS • in addition, one bore will be installed into the Grant Aquifer • all of the bores will be constructed in accordance standards set in WQPN 30. **Sampling frequency – Baseline:** • samples will be collected monthly, at least six months prior to conducting the HFS activities at each individual well site. This frequency is considered suitable and is at a higher intensity than stated in the DMP and DoW guideline (2016) which states that quarterly sampling is considered adequate for monitoring where the general objective is to track any deviation from the baseline condition over time • samples will be compared to those undertaken at the baseline control sites (DMP & DoW 2016). **Sampling frequency – Surveillance:** • during proposal implementation, samples will be collected quarterly, for 12 months. Following this period, where no significant variation from baseline is identified, the sampling frequency will drop to twice a year, and continue following decommissioning/site reinstatement until the termination criteria is achieved • where changes are identified, the frequency of sampling may be increased, and additional groundwater sampling bores installed (as required) to gain a clear understanding of any potential impact • sampling will be increased during HFS activities and for six months following the completion of these activities. Where no significant variation from baseline is identified, sampling will then revert to quarterly. **Analysis:** • as per the DMP and DoW guideline (2016), a comprehensive list of analytes will be sampled including: o in-field parameters, including water level and dissolved oxygen o physico-chemical parameters o ions, including chloride and sulphate o total metals, including arsenic and chromium o dissolved gases o benzene, toluene, ethylbenzene, xylene, naphthalene o other hydrocarbons. o radon o uranium o geogenic chemicals • surveillance samples will be compared to both local baseline samples and baseline control sites to determine if there are changes to the groundwater that could be attributed to the Proposal.
Termination criteria	Surveillance monitoring at each individual well site will be terminated following data collection of at least four consecutive sampling events following decommissioning where: • chemical/hydrocarbon constituents are below relevant benchmarks or guideline values or have returned to within the expected natural dynamics of baseline state and/or control sites.

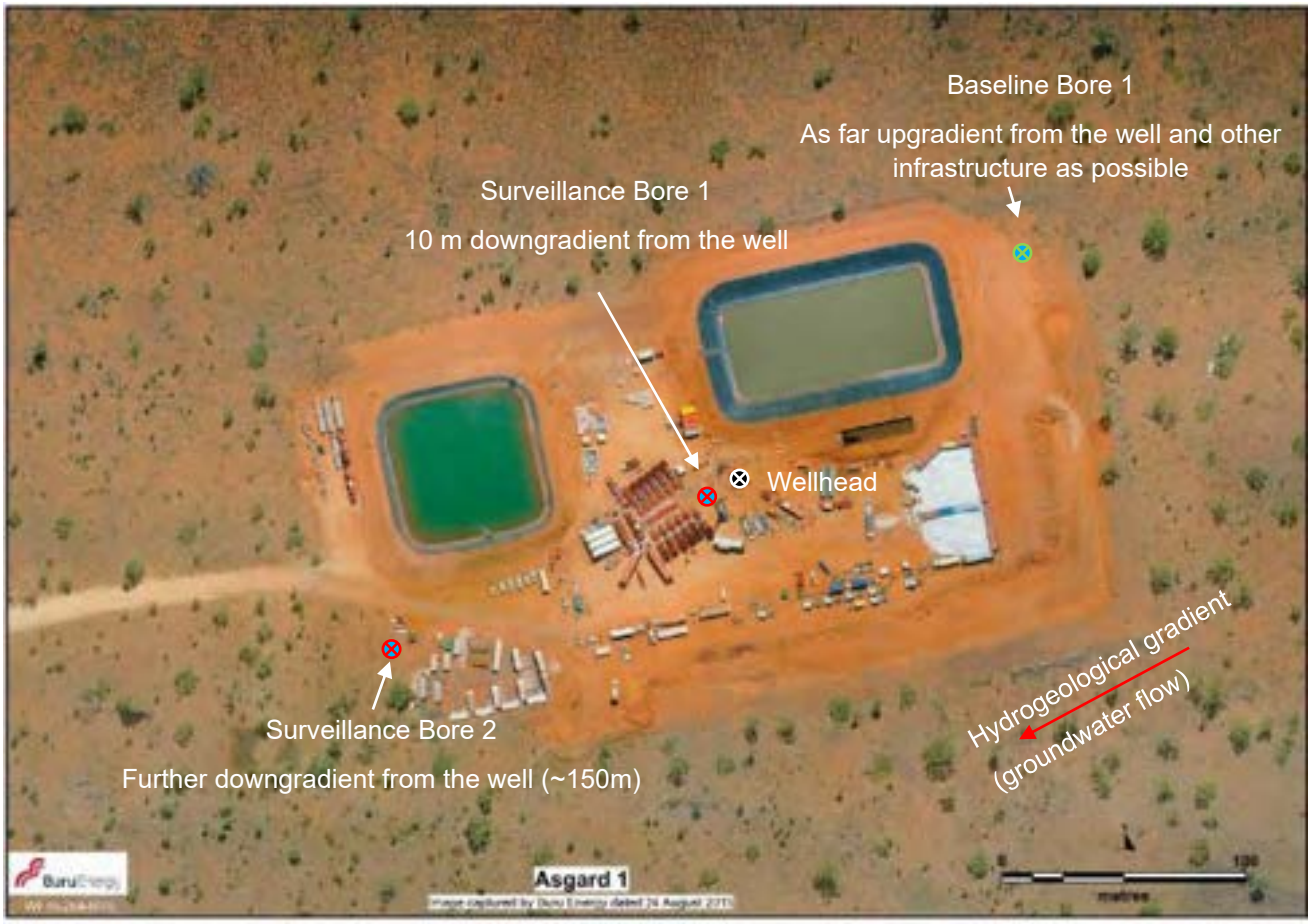

Figure 3-1: Indicative placement of baseline and surveillance bores having regard to wellsite layout

Note, figure 3-1 shows an indicative placement of monitoring bores and shows a wellsite layout with two rectangular ponds. Note that the likely site layout for this Proposal will include an L-shaped pond.

3.2 Reporting

The environmental outcomes will be routinely reported in the Part IV Compliance Assessment Report. This report will include:

- an overall statement of compliance with this GWMP
- analysis against the trigger and threshold criteria (Table 3-1) for each year
- declaration of compliance status against each of the requirements detailed in the Groundwater Monitoring Program
- a description regarding the effectiveness of any adaptive response actions that have been implemented.

In the event that threshold criteria are exceeded during the annual reporting period, exceedances will be reported to the DWER compliance branch within five days.

4 Adaptive management and review of the GWMP

4.1 Monitoring and adaptive management

A monitoring program (as defined in Section 3.1) is required to measure the effectiveness of the response actions as defined in this GWMP. The outcomes of the monitoring program will contribute to ongoing improvements in response actions to ensure an adaptive management approach is adopted.

BNR will implement an adaptive management framework that allows BNR to adapt and implement improvements as a result of monitoring against trigger and threshold criteria detailed in this document.

The following approaches will apply:

- monitoring data will be systematically evaluated
- the effectiveness and relevance of trigger level and threshold contingency actions will be evaluated to determine if any changes to response actions are required
- increased understanding of the hydrogeological regimes based on additional internal and external studies will be incorporated into the monitoring and management approach when newer relevant information becomes available where applicable.

Adaptive management practices that will be assessed as part of this approach may include:

- evaluation of the groundwater monitoring program, data and comparison to baseline data and reference sites on an annual basis to verify whether responses to project activities are the same or similar to predictions
- evaluation of assumptions and uncertainties of the management and monitoring program
- re-evaluation of the risk assessment and revision of risk-based priorities as a result of monitoring outcomes
- review of data and information gathered over the review period that has increased understanding of site environment in the context of the regional ecosystem
- assessment of changes which are outside the control of the project and the response actions identified.

4.2 Management plan review

This GWMP is intended to be dynamic and may be updated to reflect changes in management practices and the natural environment over time. Specifically, this GWMP will be reviewed and updated (as required):

- following completion of baseline monitoring and prior to commencing surveillance monitoring to ensure that the trigger and threshold criteria are updated in consultation with DWER
- annually
- and each time a new Environment Plan (under the *Petroleum and Geothermal Energy Resources Act 1967*) is approved.

This approach will allow flexibility to adopt new approaches / management measures. The effectiveness and relevance of trigger level and threshold contingency actions will be evaluated on an annual basis, and any amendments to response actions will be completed on an as-needed basis. This will include:

- amendment of response actions that are not achieving the desired outcomes
- monitoring that identifies additional impacts requiring additional response actions or changes to existing response actions
- changes to relevant legislation that may affect the implementation of response actions
- improvements to management practices to achieve a greater environmental outcome

- updates to trigger and threshold criteria following the completion of baseline sample collection prior to commencing any groundwater extraction.

Specifically, a table summarising the changes following the template provided as Table 4-1 will be developed. This table will clearly indicate location and reason/s for changes. A tracked change version of the revised GWMP will be provided for all minor, non-structural changes to the document.

Table 4-1: GWMP review template

Complexity of changes	Minor revisions ☐	Moderate revisions ☐	Major revisions ☐	
Number of key environmental factors	One ☐	2-3 ☐	> 3 ☐

5 Stakeholder consultation

Consistent with the EPA's expectations for this GWMP to align with the principles of EIA, BNR consulted with stakeholders, including the Department of Water and Environmental Regulation (DWER), during the development of the EPA referral. Engagements relevant to this GWMP are presented below in Table 5-1.

Table 5-1: Stakeholder engagement relevant to this GWMP

Stakeholder	Method of engagement	Date of engagement	Summary of engagement
Department of Communities	Email	08 Nov 2021	Enquired if the Yungngora Community groundwater bore data for the Poole Sandstone aquifer (provided by the Department) could be made publicly available in the ERD. The Department declined. As an action, BNR have compared the data and instead summarised similarities/differences without disclosing any data.
Department of Communities	Email	09 Jun 2021	Requested drinking water data from the groundwater bores monitored at the Yungngora Community, to obtain information from the deeper aquifers.
DWER	Meeting	09 Jun 2021	Continued discussion regarding the proposed groundwater monitoring program. DWER requested that background information on the underlying Poole Sandstone and Grant Group aquifers should be included in the ERD.
EPA	Phone	04 Jun 2021	Discussed baseline monitoring requirements from the draft ESD, and requested to remove the requirement to sample at each well site for a period of 24 months, and change to sampling representative control sites for a period of 24 months.
DWER	Phone	03 Jun 2021	Arranged a meeting to discuss DWER's feedback on the proposed Valhalla baseline groundwater monitoring program.
DWER	Email	26 May 2021	Discussed the suitability of the Valhalla baseline groundwater monitoring program, with regard to monitoring control sites only within the Liveringa Aquifer. Questioned that the other deeper aquifers must be discussed.
Noonkanbah Station manager	Phone	13 May 2021	Discussed the availability of bore logs from pastoral bores on the station; unofficial bore logs could be made available. Re-confirmed that BNR could sample water from the pastoral bores by unscrewing pipes or opening taps. Mentioned that access roads and fence line tracks would be graded at the end of May, and mustering activities would commence early June.
Blina Station manager	Phone and email	23 Mar 2021	Discussed sampling station bores for the baseline groundwater monitoring program – station accepted. Discussed the availability of a bore log for a bore located on Blina Station. Confirmed that BNR could sample water from that bore by opening the tap.
DWER	Email	22 Mar 2021	Reviewed sampling methodology and locations for baseline control site groundwater monitoring program. Enquired about availability of bore logs and any existing data for any pastoral bores.
Noonkanbah Station manager	Phone and email	08 Mar 2021	Discussed sampling station bores for the baseline groundwater monitoring program – station accepted. Enquired about the availability of bore logs from pastoral bores on the station. Confirmed that BNR could sample water from the pastoral bores.

For a full summary of stakeholder engagement records refer to the BNR Environmental Review Document (BNR_HSE_MP_013). Any additional consultation regarding this GWMP will be captured in subsequent revisions.

1 Overview

Bennett Resources (BNR) has prepared a site-specific Human Health Risk Assessment (HHRA) for the Valhalla Gas Exploration and Appraisal Program (the Proposal). The requirement to undertake a HHRA risk assessment was specified by the Environmental Protection Authority (EPA) in the Environmental Scoping Document (ESD), ESD requirement #52 for the environmental factor Social Surroundings:

Provide a peer-reviewed, site-specific human health risk assessment, addressing potential short and long-term health impacts of the proposal that addresses health risks from:

a. *airborne chemicals;*
b. *chemicals proposed to be used in drilling and hydraulic fracture stimulation;*
c. *fluids and those expected to be present in produced or flowback water;*
d. *storage and handling of drilling and hydraulic fracture fluids; and*
e. *storage and disposal of drilling and hydraulic fracturing flowback fluids (including wastewater).*

Note: peer-reviewed, site-specific human health risk assessments will be provided to the Department of Health for comment.

The interest and scrutiny arise from the development of a new unconventional project following the lifting of the HFS (hydraulic fracture stimulation) moratorium and the lack of public knowledge relating to impacts and risks associated with the project in region of the West Kimberley. Prior to undertaking the Proposal, the scope of potential impacts to the public that may emerge needs to be understood, verified and shared with stakeholders, as well as with the public during the Section 38 referral under the *Environmental Protection Act 1986* (EP Act). This HHRA will define the scope of impacts to public health in a site-specific context for the Proposal, based on a risk-based framework approach.

The closest relevant human receptor, an Indigenous Community, is aware and supportive of the Proposal. They are currently knowledgeable of the risks to the environment and of the chemical sources arising from the Proposal given in the past they have supported and worked for a similar unconventional project, now part of Bennett Resources' existing assets. Community members and associated workers such as pastoralists travelling within the Proposal's area understand that they are not considered susceptible or vulnerable populations likely to be exposed by the Proposal's activities.

With the extensive environmental awareness and the depth of hydrogeological knowledge of the local and regional setting, all transport mechanisms have been adequately considered. It must be highlighted that all potential pathways were explored during the preparation of this HHRA, and that the feasible and reasonable pathways and thus associated risks are the focus of this risk assessment. Where necessary, where other exposure media and pathways were not detailed, the HHRA has clarified why these were not feasible for detailed inclusion in the HHRA. This HHRA will be included in the Proposal's Environmental Review Document (ERD) for assessment by the EPA.

2 Methodology

This HHRA has been prepared in accordance with the Health Risk Assessment (Scoping) Guidelines (DoH 2010). The guidelines provide a framework for the health risk assessment component for Environmental and Health Impact Assessment processes. Specifically, the guideline is used to determine if a detailed Health Impact Assessment is required.

BNR used this process to determine which (if any) Health Hazards and subsequent Health Impacts required further detailed assessment. Procedurally, this HHRA follows a standard risk assessment approach (Figure 2-1) being:

- the activity is detailed and key issues identified relevant to the risk assessment
- hazards associated with the activities are identified
- exposure pathways associated with the hazards are identified
- the adverse effects to human health (Impacts) arising from exposure are defined
- consequence mitigation identified

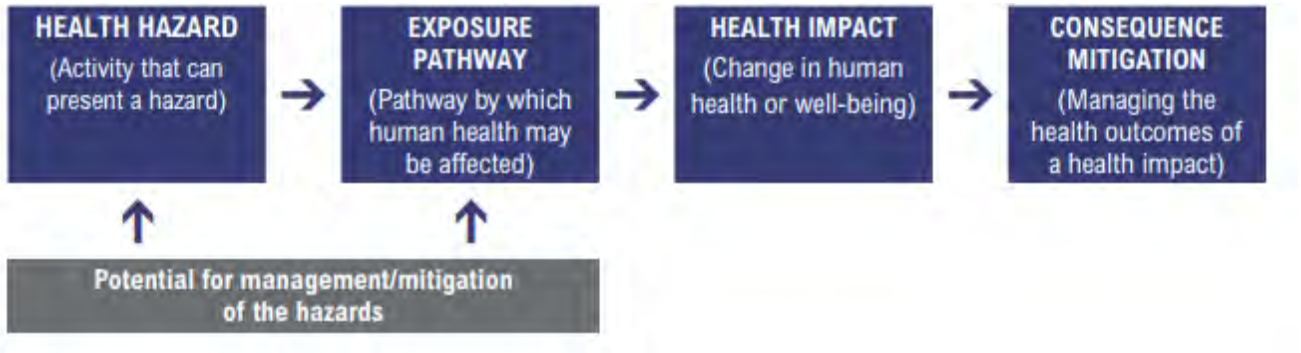

Figure 2-1: Links between health hazards and health impacts (DoH 2010)

All stages of the HHRA model are closely linked, and thus the outcomes of one stage of the assessment may affect the progression or outcomes of the subsequent assessment stage. As with all BNR risk assessments, a precautionary principle / approach has been considered applied to manage any uncertainty in the HHRA.

2.1 Project Context

2.1.1 Location and existing land use

The Proposal is located on the active Blina and Noonkanbah pastoral stations, on the Warlangurru and Noonkanbah Native Title Areas, respectively. Yungngora People of the Yungngora Community are employed by Noonkanbah Station and regularly travel on the station to verify cattle presence, feedstock, groundwater pastoral bore operation and associated watering troughs. Blina Station workers occasionally travel to the southern border of Blina Station which intersects the northern section of the Development Envelope to verify their cattle and station equipment. Cattle are free roaming, and pastoralists use existing station and BNR tracks to access specific areas of the station all throughout the Development Envelope

In addition to pastoral activities, the Traditional Owners (TOs) of the land and members of the Yungngora Community, including some Warlangurru People residing at the Jimbalakudunj Community, use the land within and surrounding the Development Envelope for cultural practices, such as hunting and gathering of traditional foods, initiations and education. The land in this region is also used for recreational purposes such as swimming and fishing. The TOs are made aware of all BNR presence and activities on the permit, with sufficient notice and engagement prior to undertaking any activities and visits to the sites.

2.1.2 Receptor Analysis

Receptors relevant to the scope of this HHRA have been grouped into two categories:

- Fixed
- Non-fixed
- Out of scope.

Fixed

BNR has defined fixed receptors as locations where humans are known to reside or be present for long periods of time. For the purpose of this assessment these include:

- the Jimbalakudunj Community – located ~20 km from the nearest proposed well site and the general Development Envelope
- the Yungngora Community – located ~28 km from the nearest proposed well site and ~20 km from the general Development Envelope

The Jimbalakudunj Community, although located closer to proposed well sites than the Yungngora Community, was not identified as a receptor of the identified potential health hazards. However, the members of the Jimbalakudunj Community travel along the permit road to access the Yungngora Community and attend meetings, particularly as Warlangurru People reside in both communities, however do not often use the land itself for other reasons. Given the distance to the proposed activities and to any of the hazards, with separation from the Great Northern Highway, no exposure pathways have been associated with the Jimbalakudunj Community as a fixed receptor.

No other tourist or public access locations are present within the Development Envelope, thus no other locations are known where humans have the potential to reside or be present for a long period of time.

Non-Fixed

The existing land use throughout the Development Envelope is pastoral use. Consequently, any pastoral station worker conducting activities throughout the station has the potential to be non-fixed receptor. For context Blina Station comprises a total area of 254,600 ha. Noonkanbah Station covering the majority of the Development Envelope comprises a total area of 172,400 ha and employs less than 10 people, with the number of workers generally doubling during the mustering season. Approximately four Yungngora locals are employed by the station. Given that the disturbance footprint of this Proposal is limited to 109 ha, the potential direct impact is limited to <0.03% of the total pastoral stations.

To further define the non-fixed receptors, pastoralists verifying the operation of pastoral bores, which may include touching the bore equipment and bore water, have been identified as those closest to the exposure pathway for non-fixed receptors. In addition to pastoral use, as stated in Section 2.1.1, TOs use the land within and surrounding the Development Envelope for cultural practices and recreational purposes. TOs utilising the land for such reasons may be defined as non-fixed receptors. Specific cultural locations where TOs may occasionally frequent are not located in close proximity of the Proposal's disturbance footprint. Consultation with the TOs has shown that BNR is aware of these areas of cultural importance to the community members.

As the Calwynyardah-Noonkanbah Road runs through the Development Envelope, this has been considered another non-fixed receptor as users of the Calwynyardah-Noonkanbah Road do not reside in this specific area nor are located along the road for a long period of time. As direct exposure to any road user is not expected, this receptor has not been considered further.

Out of scope

As detailed in Section 5.4.3.6 of the Environmental Review Document (BNR_HSE_MP_013) there are no permanent water bodies within the Development Envelope. The Mount Hardman Creek is a non-perennial water body and only flows during the wet season. As there is no vulnerable shallow aquifer in communication with seasonal creeks the use of such waterbodies will not result in any exposure, thus it has not been considered further.

2.2 Step 1 – Hazard

As defined by DoH, a Health Hazard is defined as:

The elements of an organisation's activities that present a hazard or source of risk to health or well-being and may be an event, incident or circumstances. They are activities or elements of a proposal that can interact with human health to represent a risk to health or well-being. Examples are air or water emissions, noise and displacement or relocation of people (DoH 2010).

To understand the potential health hazards associated with the Proposal, BNR developed a conceptual model which is presented in Figure 2-2. This model identifies the Health Hazards for the Proposal as being limited to:

- air emissions
- groundwater emissions
- soil contamination.

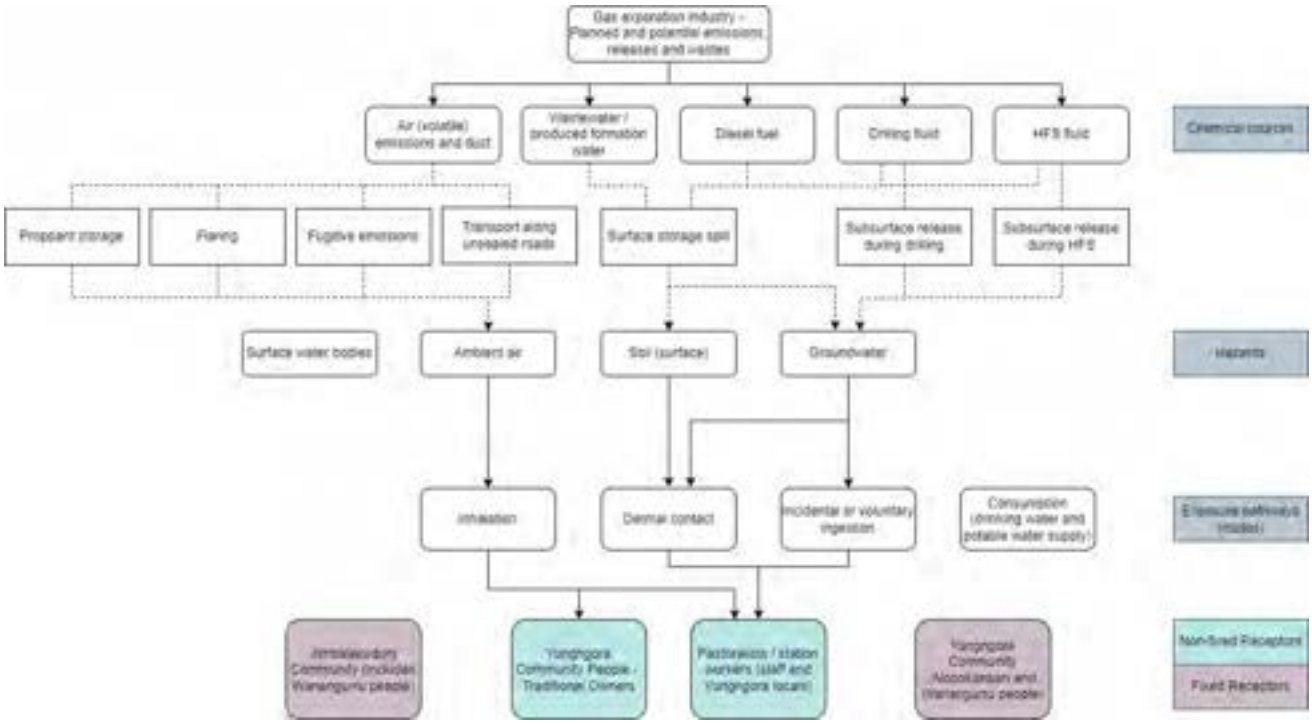

Figure 2-2: Site-specific conceptual site model illustrating the source – pathway – receptor analysis undertaken for the HHRA

2.3 Risk Assessment Process

The risk assessment process undertaken for the Proposal was completed following four steps:

- Step 1 the identification of the hazards
- Step 2 defines the feasible pathways from each of the hazards
- Step 3 determines the potential health impacts from the hazards through the identified exposure pathways
- Step 4 consists of the risk assessment itself.

The consequence of the described health impact is defined, whereby the magnitude of the impact is detailed, in qualitative or quantitative terms. Once the consequence defined, the likelihood of the consequence is determined, where the frequency and probability of the consequence occurring is evaluated, in qualitative or quantitative terms. The combination of the consequence and the likelihood of that particular consequence occurring results in the inherent health risk level for the specific hazard. The risk level is considered as an

indication of the significant of a health or well-being impact. If required, depending on this risk level, risk management criteria (management of mitigation measures required to reduce negative impact of enhance positive impact) may be applied in order to reduce the risk to human health.

2.3.1 Step 2 – Exposure

An exposure assessment was initially undertaken for each of the hazards in accordance with the DoH Health Risk Assessment (Scoping) Guidelines (DoH 2010) and in consideration with the principles set out in the DoH environmental health risk assessment process (enHealth 2012).

As defined by DoH, an exposure is defined as:

The Pathway by which human health may be affected (DoH 2010).

Given that the sources of hazards are clearly understood (refer to Section 3.1, Section 3.2 and Section 3.3), assessment of exposure to these sources was completed by considering the receptors with the potential to be exposed and consideration as to the magnitude, frequency, and duration of potential exposure (WHO 2004).

2.3.2 Step 3 – Health Impact

An impact (or risk) assessment was undertaken for each of the hazards in accordance with the DoH Health Risk Assessment (Scoping) Guidelines (DoH 2010) and in consideration with the principles set out in the DoH environmental health risk assessment process (enHealth 2012).

As defined by DoH, health impacts are defined as:

the overall effects, direct or indirect, of activities on the health of a population. The variation and vulnerability among sectors of the population need to be considered (DoH 2010).

2.3.3 Step 4 – Risk Assessment

Consistent with DoH guidelines (DoH 2010), BNR assessed the:

- Consequences, in accordance with the definitions provided in Table 2-1
- Likelihood, in accordance with the definitions provided in Table 2-2
- Risk Level, in accordance with the definitions provided in Table 2-3
- Risk Management Criteria, in accordance with the definitions provided in Table 2-4.

Table 2-1: Categories for Health Consequences (source (DoH 2010))

Category	Acute Health Consequences (per Hazard or outbreak)	Chronic Health Consequences(per Project Lifecycle)
Catastrophic 1	>1 fatality OR >5 permanent disabilities OR Non-permanent injuries requiring hospitalisationfor 5–10% of population at risk OR Acute health effect requiring hospitalisation for >5-10% of population at risk	Chronic health effect requiring medical treatment for 10–15% of population at-risk*
Massive 2	1 fatality OR 2–5 permanent disabilities OR Non-permanent injuries requiring hospitalisationfor 2–5% of population at risk OR Acute health effect requiring hospitalisation for	Chronic health effect requiring medical treatment for 5–10% of population at-risk*

	>2–5% of population at risk	
Major 3	No fatality AND (1 permanent disability OR Non-permanent injuries requiring hospitalisationfor >1–2% of population at risk OR Acute health effect requiring hospitalisation for >1–2% of population at risk OR Evacuation is necessary)	Chronic health effect requiring medical treatment for 2–5% of population at-risk*
Moderate/ Significant 4	No fatality AND No permanent disability AND (Non-permanent injuries requiring hospitalisation for 1–2% of population at risk OR Acute health effect requiring hospitalisation for1–2% of population at risk AND No evacuation	Chronic health effect requiring medical treatment for 1–2% of population at-risk*
Minor 5	No fatality AND No permanent disability AND (Non-permanent injuries requiringhospitalisation for 1–5 persons OR no acute health effect requiring hospitalisation) AND No evacuation	Chronic health effect requiring medical treatment for about 0–1% of population at-risk*
Negligible/slight 6	No fatality AND No permanent disability AND No non-permanent injuries requiringhospitalisation AND No acute health effect requiring hospitalisation AND No evacuation	No chronic health effect requiring medical treatment

Table 2-2: Likelihood Categories for Health Impact Assessments (source (DoH 2010))

Likelihood Descriptor		Frequency of Incident or outbreak with Non-Chronic Health Effect	% Chance of Chronic Health Effect during life of project
1	Rare/remote	Once in more than 10 years	Up to 5%
2	Unlikely	Once in 5 – 10 years	6 – 30%
3	Possible/ occasionally	Once in 3 – 5 years	31% – 60%
4	Likely	Once in 1 to 3 years	61% – 90%
5	Almost certain	More than once a year	Over 90%

Table 2-3: Qualitative Risk Matrix for Health Impact Assessments (source (DoH 2010))

	Consequences					
Likelihood	Slight/ negligible	Minor	Moderate	Major	Massive	Catastrophic
Almost Certain	Low	Medium	High	Extreme	Extreme	Extreme
Likely	Low	Low	Medium	High	Extreme	Extreme
Possible	Very Low	Low	Low	Medium	High	Extreme
Unlikely	Very Low	Very Low	Low	Low	Medium	High
Rare/remote	Very Low	Very Low	Very Low	Low	Low	Medium

Table 2-4: Risk management criteria according to risk rating at scoping stage (source (DoH 2010))

Risk Rating	Risk Mitigation/Management Criteria
Extreme	Potentially unacceptable: modification of proposal required
High	Major mitigation/management (including offsets) may be required – Assessment required of health hazards
Medium	Substantial mitigation/management required – Assessment required of health hazards
Low	Some mitigation/management may be required – No detailed assessment of health hazards required butaddressed with routine controls
Very Low	No further assessment required

2.4 Peer Review

BNR engaged Geosyntech consultants (Geosyntech) to complete a review of this HHRA. BNR sent through Revision 0 to Geosyntech to which a response was provided (included as Appendix A). In summary Geosyntech provided the following recommendations (Summarised):

- BNR consider Surface Water Resources, and describing these even if no exposure pathway existed
- To include more information on Constituents of Potential Concern (COPC)
- To discuss surface release and exposure to groundwater systems

In summary, Geosyntech stated:

Overall, the study is very close to complete, is well ordered, easy to follow, and consistent with relevant administrative authority guidelines. Excepting additional discussion regarding the projected nature and extent of proposal CoPCs, and in recognition of the very low potential for exposure to populations outside Valhalla Gas workers, it is unlikely that a more detailed and comprehensive HHRA will be required.

BNR addressed the recommendations from Geosyntech in Revision 1 of this HHRA.

3 Health Risk Assessment

3.1 Air

3.1.1 Hazard

Exposure to air emissions is limited to dust emissions and volatile organic compunds (VOCs).

The health hazards (activities that can present a hazard and interact with human health) from air include:

- VOCs and dust from transport along unsealed roads / tracks
- Dust from proppant (fine sand) storage on site
- VOCs and products of incomplete combustion (PICs) from flaring during well testing activities on site
- VOCs as fugitive emissions from the well following completion of HFS activities.

These health hazards will be limited to the duration of the activities at each well site and transport along the roads and tracks during mobilisation and demobilisation of the Proposal equipment.

3.1.2 Exposure

Monitoring from other programs have demonstrated that VOCs rapidly dissipate upon release with no ground level exposures above human health criteria/screening levels (Ramboll 2019). As such, no further consideration of human health impacts from VOCs have been considered given there is no potential exposure to Fixed or Non-fixed receptors.

As such, health impacts associated with changes to ambient air are associated with the following pathway:

- Inhalation (respiratory system) associated with dust from sand storage onsite.

BNR reviewed the Proposal's Chemical Inventory (Appendix A of the Valhalla Environmental Review Document [BNR_HSE_MP_013]) to identify products that contained:

- suspected carcinogens
- mutagens,
- developmental toxicants and endocrine disruptors.

These were then further refined to understand those products that pose a human health risk via inhalation. Specifically for the water-based drilling fluid, cementing system and HFS fluid, the following Constituents of Potential Concern (CoPC) were identified as posing a human health risk:

- Silica.

Silica can be measured onsite through monitoring of particulate matter (PM). Baseline studies identified a range of environmental concentrations for $PM_{2.5}$ and PM_{10} onsite dependant on various environmental conditions. The Valhalla Monitoring Plan (Appendix C of the Valhalla Environmental Review Document [BNR_HSE_MP_016]) details 24-hour average – Health indicators for $PM_{2.5}$ and PM_{10}. BNR will monitor for these over the course of the Proposal.

As detailed in Section 5.5.3.1 of the ERD, the closest public communities (Aboriginal communities) are located 20 km and 28 km from the closest proposed well sites within the Development Envelope. No other fixed sensitive human receptors are known to occur within the Development Envelope.

Consequently, no exposure to fixed receptors is expected to arise from dust emissions associated with the Proposal.

As stated in Section 2.1.2, pastoral workers and travelling Yungngora Community TOs have the potential to be present within the Development Envelope over the course of the Proposal. These workers and people using the land for traditional purposes are considered Non-fixed receptors and exposure would only occur in the event they were located within proximity of the well site during HFS activities. As dust from the proppant storage is

expected to be influenced by the weather and wind conditions, and as baseline monitoring has indicated existing PM levels within the Development Envelope fluctuate due to the weather conditions, the change to ambient air quality levels is not expected to be significant.

3.1.3 Impact

It is well established that dust emissions can have adverse impacts (adverse changes) on human health. These health impacts can be both short-term (acute) and long-term (chronic). Dust particles (i.e. in the PM_{10} and $PM_{2.5}$ size ranges) including fine sand particles that are readily inhaled are associated with a range of chronic health effects. Both fine and coarse dust particles can cause acute health effects (e.g. eye or breathing irritation) and also deposit and remain on surfaces leading to soiling.

Further to this, a completed HHRA, in accordance with DoH guidelines (DoH 2010), is provided in Table 3-1.

Table 3-1: Human Health Risk Assessment – Air

	Description
Consequence	The generation of dust on unsealed roads already occurs within the Development Envelope from community members travelling to and from the Yungngora and Jimbalakudunj Communities, and from pastoral activities along existing access tracks and transportation of cattle using road trains on the unsealed Calwynyardah-Noonkanbah Road. Current PM_{10} dust levels along the road often exceed the daily health guideline levels of 50 µg/m^3 most days of the week. Dust resulting from the Proposal will only increase the current dust concentrations along the Calwynyardah-Noonkanbah Road during transportation of equipment to and from the well sites, and specifically on parts of the road located at least >20 km away from the closest community. Proppant, or frac sand, is expected to be stored on each well site and protected from wind and equipment that may disturb the sand. The mechanical handling of sand for storage on site and during the preparation of HFS fluid may generate dust that can temporarily disperse to the exterior of the well site fences. Given the distance to potential Non-fixed human receptors in the Development Envelope, the temporal nature of their presence in the area, and as the Proposal has more separation than recommended in accordance with EPA Guidance (EPA 2005), the Proposal is not expected to result in any chronic health effects requiring medical treatment.
Likelihood	In accordance with DoH guidelines, BNR does not believe that the Proposal would result in one event / incident of chronic health in more than 10 years and consequently the likelihood of exposure is considered rare / remote. The reason to this is that the public (including TOs from the Yungngora Community and pastoralists) is restricted from site access, and exposure will be limited to the duration of the activity which will be limited to months (at each well site). Consequently, the duration of exposure will be limited, the extent to which humans can be exposed is limited and the nature of the exposure (as detailed in Section 5.6.3 in the ERD) is limited.
Inherent Risk Level	Based upon the DoH qualitative Health Impact Assessment risk matrix, the level of risk is: **Very Low**.
Uncertainty	BNR has completed monitoring of existing dust and VOC air quality within the Development Envelope. Consequently, during the implementation of the Proposal, BNR will be able to monitor the changes to air quality associated with the Proposal. Given the robust amount of baseline data combined with the proposed monitoring program and actions in Appendix C of the ERD, there is limited uncertainty associated with the Proposal.
Health Risk management	Based upon the DoH risk management criteria, no further assessment is required.

3.2 Groundwater

3.2.1 Hazard

Exposure to groundwater is limited to CoPCs that may reach Liveringa Aquifer groundwater used by pastoral station bores screened in the same aquifer. The health hazards (activities that can present a hazard and interact with human health) from groundwater include:

- surface release of drilling fluids and HFS fluids
- subsurface release of drilling fluids
- subsurface release of HFS fluids.

3.2.2 Exposure

Groundwater contamination is associated with unplanned events, specifically relating to drilling or HFS fluid systems. Groundwater exposure to humans is limited to those events that reach the Liveringa Aquifer groundwater used by pastoral station bores screened in the same aquifer. The closest utilised pastoral bores are located >1.5 km away from the closest proposed well site.

Although the release of subsurface HFS fluids was identified as a chemical source, HFS fluids will only have the potential to be released along the HFS zones between 2,000 m and 5,000 m below ground. As such, any release would be contained by the thick shale layers from the Laurel and Anderson formations as described in Section 5.4.5.4 of the ERD. With over 1.5 km separation between the targeted Laurel Formation during HFS activities and any Community bores used for potable water screened in the Poole and Grant aquifers, a subsurface release of HFS fluids was not considered to result in a feasible exposure pathway.

The release of drilling fluids to an aquifer is only a hazard whilst drilling through the Liveringa Aquifer. As detailed in Section 5.4.5.2 of the ERD, BNR are required to utilise low-toxicity water-based drilling fluids when installing the surface casing. Once the surface casing is installed, there is no risk of drilling fluid loss as the surface casing provides a barrier between the drilling fluids and the aquifer. Consequently, the health hazard from groundwater specifically includes:

- Lost circulation events causing contamination of groundwater during the installation of the surface casing (drilling activity).

As stated in Section 2.1.2, pastoral workers and community members traditionally using the land have the potential to be present within the Development Envelope over the course of the Proposal. These people are considered Non-fixed receptors and exposure would only occur if:

- an unplanned release of drilling fluids occurred during installation of the surface casing
- the pastoral bores are located down gradient of the well site
- pastoral bores were in operation and CoPCs were pumped to the surface

Consequently, exposure to contaminated groundwater is extremely unlikely. However, should this occur, health impacts associated with changes to groundwater are limited to the following pathways:

- dermal contact
- incidental and voluntary ingestion

Consumption (drinking water) has been differentiated from incidental or voluntary ingestion, and was not considered further given that the surficial Liveringa Aquifer is not used for potable water purposes or for Community water supplies. The pathway ‘incidental or voluntary ingestion’ was considered given that pastoral workers are known to drink raw bore water whilst working, and TOs may know the location of these pastoral bores and use the water if needed when hunting and roaming in the permit area.

BNR reviewed the Chemical Inventory (Appendix A of the Valhalla Environmental Review Document [BNR_HSE_MP_013]) to identify products that contained:

- suspected carcinogens
- mutagens,
- developmental toxicants and endocrine disruptors.

These were then further refined to understand those products that pose a human health risk via dermal contact or ingestion. Specifically for the water-based drilling fluid, cementing system and HFS fluid, the following COPC were identified:

- Nitrilotriacetic acid, trisodium salt monohydrate
- Sulfuric acid

The outcomes of local groundwater characterisation is included as Appendix H of the Valhalla Environmental Review Document (BNR_HSE_MP_013). These studies identified a range of environmental concentrations for relevant CoPCs, including chloride and sulfate. These ranges indicate levels are relatively steady throughout the Development Envelope. Concentrations will continue to be monitored and management actions undertaken in accordance with the trigger and threshold criteria detailed in the Groundwater Management Plan (Appendix I of the Valhalla Environmental Review Document [BNR_HSE_MP_015]).

As detailed in Section 5.4.5.5 of the Environmental Review Document (BNR_HS_MP_013), based on the depth to groundwater, any surface release is expected to take 70–300 days to travel from the ground surface to the water table (Rockwater 2016). With the mitigations in place, BNR did not deem this a credible hazard, thus it has not been considered any further.

3.2.3 Impact

It is well established that the quality of groundwater, when used for drinking purposes, can have adverse impacts on human health. These health impacts can be both short-term (acute) and long-term (chronic) depending on the CoPCs, the concentration of CoPCs and the duration of consumption of water. Although Liveringa Aquifer groundwater is not extracted and drunk as potable water, or stored for potable water supplies for communities or residences, as discussed in Section 3.2.2, only dermal contact and incidental or voluntary ingestion of non-treated non-potable bore water have been identified as feasible exposure pathways for groundwater. Dermal contact with non-treated bore water with higher concentrations of CoPCs may potentially lead to skin irritations, including skin dryness. Incidental or voluntary ingestion of non-treated bore water, in general, may result in aesthetically displeasing tastes and potentially temporary upset stomachs, based upon the expectation that a limited amount of bore water is ingested occasionally.

Further to this, a completed HHRA, in accordance with DoH guidelines (DoH 2010), is provided in Table 3-2.

Table 3-2: Human Health Risk Assessment – Groundwater

	Description
Consequence	A local and regional groundwater characterisation of the Liveringa Aquifer, including of the CoPCs identified as indicator constituents for drilling fluid, has shown that groundwater quality varies within the Development Envelope. Previous operational and surveillance monitoring on site during similar drilling operations in the Development Envelope showed no significant variation in CoPC data that was attributable to drilling activities. With the limited amount of drilling fluid potentially released at the subsurface, the dilution of CoPCs, and the migration of any CoPCs to the location of pastoral bores, the quality of the groundwater abstracted away from any of the well sites (>1.5 km) is not expected to differ from natural variations. Similar petroleum industry activities occur around the state, where low-toxicity drillings fluids are used. Low-toxicity drilling fluids are planned to be used by BNR that are not expected to result in environmental impacts, nor health impacts. Given the distance to the Non-fixed TO receptors using the whole permit area, and their infrequent presence around the pastoral bores, the Proposal is not expected to result in any chronic health effects to TOs using the land for cultural or recreational purposes, that would require medical treatment.

	Despite the more regular presence of station workers around the pastoral bores and frequency of contact with bore water, the Proposal is still not expected to result in any chronic health effects to station workers that would require medical treatment.
Likelihood	In accordance with DoH guidelines, BNR does not believe that the Proposal would result in one event / incident of chronic health in more than 10 years and consequently the likelihood of exposure is considered rare / remote. The reason to this is that the community members are not expected to use or touch groundwater from pastoral bores unless needed in case of thirst, given their remote location within the bush in the Development Envelope away from the Community residences. Additionally, pastoralists are aware that the groundwater abstracted from their bores are for cattle watering purposes. Pastoralists will regularly clean and maintain the cattle troughs where bore water is run through. Voluntary drinking directly from the bore pump pipe is common during station activities. As such, the dermal and ingestion exposures are limited to if and when these Non-fixed receptors are purposefully visiting the pastoral bores. Consequently, the duration of exposure will be limited, the extent to which the public can be exposed is limited and the nature of the exposure (as detailed in the Consequence section above) is limited.
Inherent Risk Level	Based upon the DoH qualitative Health Impact Assessment risk matrix, the level of risk is: Very Low.
Uncertainty	The previous operator of the permit completed groundwater monitoring on bores within existing well sites that underwent drilling and HFS activities, which showed no significant variation in CoPC data that was attributable to drilling activities. BNR has completed further groundwater monitoring, including baseline monitoring within the Development Envelope to further understand the existing groundwater quality of the Liveringa Aquifer (in which pastoral bores are screened and in which Proposal monitoring bores will be screened) within the Development Envelope. Consequently, during the implementation of the Proposal, BNR will be able to monitor if any changes to groundwater quality associated with the Proposal occur. Given the robust amount of baseline data combined with the proposed monitoring program and actions in Appendix C of the ERD, there is limited uncertainty associated with the Proposal.
Health Risk management	Based upon the DoH risk management criteria, no further assessment is required.

3.3 Soil

3.3.1 Hazard

Soil contamination has the potential to occur from an unplanned release (spill event) on site over the course of the Proposal. Specifically, the onsite surface spill events may include spills from:

- drilling fluids
- HFS fluids during pumping
- wastewater – produced formation water
- diesel fuel storage.

3.3.2 Exposure

Exposure to humans is limited to those events that result in contamination outside of the well site. With the exception of well site access tracks (that are likely to be used for pastoral access once installed), the closest Non-fixed receptors (pastoral workers) who would be regularly visiting the area surrounding the well sites would be located ~1.5 km away given this is the distance to the closest pastoral bore.

This health hazard will be limited to each well site and the immediate perimeter (i.e. the firebreaks) during operation of the Proposal. The current pastoral activity within the Development Envelope around all proposed well sites is limited to cattle grazing. The land is not used for other agricultural reasons and is not used from crop growth for human consumption.

These station workers are considered Non-fixed receptors and exposure would only occur if:

- an unplanned release occurred that resulted in contamination outside of the well site

- the station workers were on-site at the time of release.

Consequently, exposure is extremely unlikely. However, should this occur, health impacts associated with changes to soil are limited to the following pathways:

- dermal contact.

3.3.3 Impact

Dermal contact of contaminated soil with higher concentrations of CoPCs may lead to skin irritations, including skin dryness. Dermal contact may also lead to dermal absorption of CoPCs from soil. Impacts would be expected to be acute (short-term), and dependant by a variety of physical and chemical factors, including the type of CoPCs, the soil-chemical contact time, the degree of chemical saturation of the CoPCs in soil, the area of exposed skin, continuity/duration of soil-skin contact (exposure time), the amount of soil adhering to the skin and the amount of contaminant absorbed through the skin (NEPC 1999).

The substances for which dermal contact from soil and associated impacts are most likely to be significant are lipophilic compounds that are relatively long lived in the environment, accumulate in the body, and present a chronic (e.g., carcinogenic) risk (Spalt, et al. 2009).

Further to this, a completed HHRA, in accordance with DoH guidelines (DoH 2010), is provided in Table 3-3.

Table 3-3: Human Health Risk Assessment – Soil

	Description
Consequence	As detailed in the ERD in Section 5.2.3.2 and in the human health hazard for soil in this HHRA, spills from drilling fluids, produced formation water and diesel fuel have the potential to contaminate soil and affect Non-fixed receptors. On this basis, the analytes considered both as indicators of spill events and as CoPCs for human health are Total Recoverable Hydrocarbons from diesel, Barium, Chloride, Cadmium and Chromium III from drilling fluids, HFS fluids and produced formation water. Similar petroleum industry activities occur around the state, where low-toxicity drillings fluids are used. Low-toxicity drilling fluids are planned to be used by BNR that are not expected to result in environmental impacts, nor health impacts. Regional baseline soil quality sampling, including for the above CoPCs, have shown that soil quality varies throughout the Development Envelope. Should a spill event occur on site during operations and contamination occur outside of the well site, this would result in the presence and/or increase of these specific CoPCs in soil prior to BNR immediately implementing management measures and remediation of the contaminated soil. Dermal contact with the CoPCs characteristic of the chemical sources is not expected to result in significant health impacts, primarily due to the nature of the exposure pathway and the very temporal nature of the exposure. Contact with these CoPCs will result in irritation and sensitization only if the skin contact is prolonged. Given the predicted distance to Non-fixed sensitive receptors at least 1.5 km away, the frequency of their presence in the surrounding area (approximately once a week), and the unlikely long-term skin exposure should a spill event occur, the Proposal is not expected to result in any chronic health effects requiring medical treatment.
Likelihood	In accordance with DoH guidelines, BNR does not believe that the Proposal would result in one event / incident of chronic health in more than 10 years and consequently the likelihood of exposure is considered rare / remote. The reason to this is that the public is restricted from site access, the hazards are unlikely to go beyond the delimitation of the well sites, and remediation of any hazard is planned to occur as soon as possible to limit impacts to the environment in the first instance. Consequently, the duration of exposure will be limited, the extent to which the public can be exposed is limited and the nature of the exposure is limited.
Inherent Risk Level	Based upon the DoH qualitative Health Impact Assessment risk matrix, the level of risk is: **Very Low**.
Uncertainty	BNR has undertaken baseline soil monitoring within the Development Envelope to understand the existing soil quality of the different soils within region. Consequently, during the implementation of the Proposal, BNR will be able to monitor if any changes to soil quality associated with the Proposal occur. Given the robust amount of baseline data combined with the proposed monitoring program and actions in Appendix C of the ERD, there is limited uncertainty associated with the Proposal.

Health Risk management	Based upon the DoH risk management criteria, no further assessment is required.

4 Conclusions

This HHRA has presented plausible evidence of the exposure pathways linking the source of contamination and the exposed receptors. With the exception of air emissions (associated with dust generation), all exposure mechanisms are based upon unplanned events that are well understood in the industry with suitable management and consequence mitigation measures in place.

All risks were deemed to be very low according to characterisation in accordance with the DoH risk matrix, which determined that no further risk characterisation is required.

No specific human health risk management or the implementation of mitigation measures are necessary and this is consistent with advice from the Department of Health that indicate that detailed Human Health Risk Assessment is required when the source of the risk is located within close proximity of sensitive receptors.

This Human Health Risk Assessment demonstrates that the Proposal is not expected to have an impact on public health at the Yungngora and Jimbalakudunj Communities, nor on the associated pastoral station workers and Traditional Owners travelling on the land within the Development Envelope.

TECHNICAL MEMORANDUM

Date: January 7, 2022

To: Samantha Richardson
Black Mountain Energy, Perth, WA

From: Travis Kline, MEM, BCES,
Geosyntec Consultants, Inc., Washington DC

David Reynolds, Ph.D., CEnvP (SC), Sydney, NSW

Subject: Peer Review of *Human Health Risk Assessment*, Valhalla Gas Exploration and Appraisal Program, Bennett Resources, December 14, 2021

1. INTRODUCTION

Overall, the document is well-organized and conforms to the recommendations and structure as outlined in *Health Risk Assessment (Scoping) Guidelines* (DoH 2010). These guidelines provide a framework for the health risk assessment component for the Environmental and Health Impact Assessment processes, and incorporate, by reference, Department of Health (DoH) and Ageing and enHealth Council (2002, 2012) environmental health risk assessment guidelines as well as DoH human health risk and hazard guidelines issues for Western Australia (DoH 2006).

2. Recommendations

a. **Surface Water Resources:** There is no discussion of surface water bodies (e.g., creeks, ponds) within the proposal area, although Section 2.1.1 lists swimming and fishing as relevant recreational activities in consideration of local communities. It is understood that there are no permanent water bodies within the development envelope, with Mt. Hardman Creek, a seasonal water body, the closest for consideration. Given that there is no vulnerable shallow aquifer in communication with even seasonal creeks, the predominant release mechanism associated with potential environmental exposure is the catastrophic failure and release of hydraulic fracturing fluid from container trucks or the lined retention ponds. The document could benefit from a discussion surrounding the low potential for surface water impacts and clarification of how flowback water will be managed on-site (e.g., impoundment construction, lining, secondary containment, if any). Surface water, as a receiving medium, should be added to Figure 2-2, if only to designate the absence of a complete exposure pathway under foreseeable future conditions.

b. **Constituents of Potential Concern (CoPCs):** The document could benefit from a discussion of the CoPCs at issue. Section 3, Health Risk Assessment, notes volatile

organic compounds (VOCs) and dust in ambient air and drilling fluids and HFS fluids in groundwater. Table 3-3 lists the potential presence of diesel range hydrocarbons, barium, cadmium, and chromium in soil, resulting from drilling fluids, but there is no discussion of surfactants, algicides, lubricants, etc., associated with hydraulic fracturing fluids. It is understood that indirect inhalation of off-gassing VOCs or dust by populations other than Valhalla Gas employees is likely to be very minimal, given the large ambient air mixing zone. Direct contact with soil, impacted by localized spills at well heads during development, by non-Valhalla Gas employees is not anticipated, except as a component of trespassing. The pastoral bores do not supply residential drinking water, but they do supply water for cattle and, as noted by Bennett, periodic ingestion by station workers or transients. I will defer to Valhalla in regard to specific CoPCs in light of the need to protect business confidential/proprietary mixtures, but in the absence of more detail with regard to type of chemical and anticipated concentration in environmental media, it is impossible to judge the accuracy or defensibility of generalized, qualitative assessment and elicited outcomes, such as "potentially temporary upset stomachs." In addition, Section 3.3 notes that some CoPCs could be associated with bioaccumulation. In light of cattle watering (Liveringa aquifer, low susceptibility from well development) and biotrophic transfer, the document could benefit from additional clarification. I am in agreement that there is low potential for chronic exposure (even if carcinogenic constituents are present) and very low potential for negative acute exposures; however, additional detail regarding specific CoPCs and anticipated ranges of environmental concentrations (perhaps in comparison to relevant health-based screening criteria) would significantly support the document as a defensible decision management tool and obviate the need for a detailed HHRA in the eyes of EPA and DoH.

c. **Soil to Groundwater Leaching:** There is limited to no discussion of surficial releases and their potential impact to groundwater. I am unsure of the depth to the Liveringa (or the screen depth of pastoral bores completed in the Liveringa), but if it is within 30 mbgs, leaching and transfer to groundwater (and anticipated dilution/attenuation) is worth mentioning. Figure 2-2 can be updated to show surface soil to subsurface soil to groundwater as a contributing pathway (unless the depth to the Liveringa is too extreme). It is also worth mentioning that surficial releases will attenuate with depth and that there are no anticipated complete exposure pathways associated with subsurface soil for populations other than Valhalla Gas workers. Figure 2-2 should also be updated to include incidental ingestion of soil in any complete exposure pathway identifying dermal contact with soil.

d. **Minor Clarifications:** The HHRA was not reviewed from a purely editorial perspective, although the following minor corrections are noted:
    i. **Section 3.1.1, Hazard:** VOCs should be defined as volatile organic compounds (not carbons).
    ii. **Section 3.1.1, Hazard:** The third bullet in this list should be revised to reflect: "VOCs and products of incomplete combustion (PICs) from flaring during well testing activities on site."
    iii. **Ramboll 2019.** Geosyntec did not conduct a thorough review of Ramboll 2019 but notes that this study reflects one specific operation. Geosyntec has not judged whether this operation is sufficiently similar in scope and nature to the Valhalla proposal, but is in general agreement that the low-level emissions associated with these activities will readily dissipate in the ambient air breathing zone, given the huge mixing zone available under proposed operations. Geosyntec does note that the only identified human health concern in the Ramboll 2019 study was predicated on dust and driven by background conditions (i.e., PM2.5, Caversham monitoring station), not specific to the study area.

3. SUMMARY & CONCLUSION

Overall, the study is very close to complete, is well ordered, easy to follow, and consistent with relevant administrative authority guidelines. Excepting additional discussion regarding the projected nature and extent of proposal CoPCs, and in recognition of the very low potential for exposure to populations outside Valhalla Gas workers, it is unlikely that a more detailed and comprehensive HHRA will be required.

Sincerely,

Travis Kline, MEM BCES
Senior Principal

Appendix O. Valhalla Baseline Noise Monitoring Report

MEMO

Project:	Valhalla Gas Exploration and Appraisal Program – Baseline Noise Monitoring Survey	**Document No.:**	Mm 001 r01		
To:	Bennett Resources Pty Ltd	**Date:**	29 September 2021		
Attention:	Bennett Resources representatives	**Cross Reference:**	-		
Delivery:	Email	**Project No.:**	20210638		
From:	Ben Wilson	**No. Pages:**	17	**Attachments:**	Yes
Subject:	Baseline noise monitoring data				

The memo outlines the results of a baseline noise monitoring survey carried out for the proposed Valhalla Gas Exploration and Appraisal Program in the Kimberley region of Western Australia.

SURVEY DETAILS

Three noise loggers were deployed by Bennett Resources representatives from 16 – 23 August 2021. The loggers were deployed at sites being used concurrently for air quality monitoring.

The purpose of the survey was to establish existing background noise levels at representative locations around the project site.

Noise environment

Each logger was deployed at a remote rural/outback location. The noise environment was typically characterised by sounds from natural sources (bird song, insects, wind generated noise). It is understood vehicle use on nearby access roads is infrequent and not a dominant contributor to average noise levels.

A constant low-level noise was generated by the co-located air quality monitoring equipment which was only apparent at the quietest periods. The noise monitors were relocated midway through the survey to eliminate any influence of this noise (typically within 20-30 m of the original location).

Equipment details

Table 1 presents the detail of the noise logging equipment used for the survey. The location of each noise logger is also provided. Photos showing the loggers are presented in Appendix D. A map showing the location is provided in Appendix E.

A field calibration check was carried out. No significant change in level was noted for the survey period.

The loggers were configured to continuously measure noise levels at 125 ms intervals (post processed to generate 15-minute logging periods). Measurements were obtained using the slow ('S') response time and A-weighting frequency network for consistency with the *Western Australia Environmental Protection (Noise) Regulations 1997 (the Noise Regulations)* .

The logger microphones were mounted on tripods at a height of approximately 1.2m above ground level in free field conditions.

Weather conditions during the survey period were fine (no rain) and typical for the northern dry season, based on review of the BoM data from the Fitzroy Crossing weather station. Wind speeds during the survey were typically lowest during night-time periods with higher wind speeds during the middle of the day. Site specific conditions can be confirmed by AES.

Table 1: Noise monitoring equipment details

Logger/equipment	Device Type	Serial Number	Coordinates
Logger 1	01dB Cube (FW 2.50)	10423	17° 53' 55.05 S 124° 40' 08.52 E
Logger 2	01dB Cube (FW 2.50)	10418	18° 15' 44.57 S 124° 51' 46.22 E

Calibrator	Cal 21	34134143	n/a

RESULTS

Table 2 - Table 4 present the average levels for the day, evening and night periods for each logger. A range of typical measurement parameters have been presented.

A daily breakdown of the results is presented in Appendix B. Time history plots are provided in Appendix C

Table 2: Average noise level – Day time period (Day 0700-1900)

Logger	L_{Aeq}	L_{AS10}	L_{A90}	L_{ASmax}	L_{AS1}
Logger 1	44	42	34	56	48
Logger 2	46	52	43	44	42
Logger 3	46	44	32	55	51

Table 3: Average noise level – Evening period (1900-2200)

Logger	L_{Aeq}	L_{AS10}	L_{A90}	L_{ASmax}	L_{AS1}
Logger 1	40	42	31	50	45
Logger 2	52	51	46	57	53
Logger 3	48	48	43	52	50

Table 4: Average noise level – Night period (2200-0700)

Logger	L_{Aeq}	L_{AS10}	L_{A90}	L_{ASmax}	L_{AS1}
Logger 1	57	36	25	63	45
Logger 2	46	39	34	51	42
Logger 3	36	28	26	43	34

DISCUSSION

The results show levels that are consistent with remote locations not heavily influenced by human activity. Diurnal patterns typical of urban areas (higher average levels during the day and quieter at night) were not observed. Instead, noise levels were influenced by bird song and insects which are active during the early morning (dawn) and evening/early night periods. Detailed review of the L_{eq} levels for Logger 1 shows that they were likely to be heavily influenced by early morning bird song between 4-6am which may explain why the average night L_{eq} level is higher than the day and evening periods.

Brief periods of elevated levels (spikes in L_{Amax} levels) are likely due to vehicles passing or when birds and insects were located near the microphone (this was confirmed through sampling of audio from logger 3).

Of particular note is the very low levels of background noise at some periods during the night-time, particularly at logger location 3. Background levels (typically quantified using the L_{A90} parameter) fall below 20 dB for some periods at each location (see plots in Appendix C). This is at the quieter end of the range that might typically be expected in a remote location. Background noise at this level will not provide any masking so noise from any industrial or commercial sources could be more noticeable than might be the case in less remote areas with high background noise environments. This may be a relevant consideration during the assessment phase of the project, noting that the lower night-time assigned noise level is L_{A10} 35 dB.

APPENDIX A GLOSSARY OF TERMINOLOGY

Ambient	The ambient noise level is the noise level measured in the absence of the intrusive noise or the noise requiring control. Ambient noise levels are frequently measured to determine the situation prior to the addition of a new noise source.
A-weighting	The process by which noise levels are corrected to account for the non-linear frequency response of the human ear.
dB	Decibel The unit of sound level. Expressed as a logarithmic ratio of sound pressure P relative to a reference pressure of Pr=20 μPa i.e. dB = 20 x log(P/Pr)
dBA	The unit of sound level which has its frequency characteristics modified by a filter (A-weighted) so as to more closely approximate the frequency bias of the human ear.
Frequency	The number of pressure fluctuation cycles per second of a sound wave. Measured in units of Hertz (Hz).
L_{A01}	The noise level exceeded for only 1% of the measurement period, measured in dBA. This is sometimes referred to as the typical maximum noise level.
L_{A10}	The noise level exceeded for 10% of the measurement period, measured in dBA. This is commonly referred to as the average maximum noise level.
$L_{A90\,(t)}$	The A-weighted noise level equalled or exceeded for 90% of the measurement period. This is commonly referred to as the background noise level. The suffix "t" represents the time period to which the noise level relates, e.g. (8 h) would represent a period of 8 hours, (15 min) would represent a period of 15 minutes and (2200-0700) would represent a measurement time between 10 pm and 7 am.
$L_{Aeq\,(t)}$	The equivalent continuous (time-averaged) A-weighted sound level. This is commonly referred to as the average noise level. The suffix "t" represents the time period to which the noise level relates, e.g. (8 h) would represent a period of 8 hours, (15 min) would represent a period of 15 minutes and (2200-0700) would represent a measurement time between 10 pm and 7 am.
L_{Amax}	The A-weighted maximum noise level. The highest noise level which occurs during the measurement period.
Masking Noise	Background noise that is not disturbing, but due to its presence causes other unwanted noises to be less intelligible, noticeable and distracting.
Octave Band	A range of frequencies where the highest frequency included is twice the lowest frequency. Octave bands are referred to by their logarithmic centre frequencies, these being 31.5 Hz, 63 Hz, 125 Hz, 250 Hz, 500 Hz, 1 kHz, 2 kHz, 4 kHz, 8 kHz, and 16 kHz for the audible range of sound.
SPL or L_P	Sound Pressure Level A logarithmic ratio of a sound pressure measured at distance, relative to the threshold of hearing (20 μPa RMS) and expressed in decibels.

APPENDIX B DETAILED RESULTS

Table 5 to Table 13 present the breakdown of average levels for each day. It should be noted that the results for the first day period (Monday 16 August) and last night period (Sunday 22 August) are based on partial periods since data was not collected for the entire period due to deployment and retrieval times.

1. INTRODUCTION

Herring Storer Acoustics was commissioned by Bennett Resources Pty Ltd to undertake an acoustic assessment of noise emissions from the Valhalla Gas Exploration and Appraisal Program.

The Valhalla Gas Exploration and Appraisal Program is located approximately 51 km North West of the townsite of Fitzroy Crossing (Shire of Derby-West Kimberley) in the Canning Basin Region in the State of Western Australia. It is located within the Petroleum Lease EP 371.

Access to the Proposal area is via the Great Northern Highway and Calwynyardah-Noonkanbah Road from the township of Fitzroy Crossing.

The nearest noise sensitive premises are to the north and south of the Development Envelope of the Proposal, being the Jimbalakudunj and Yungnora Communities. Ten proposed well sites form part of the Proposal, with the closest wells being between 20 and 28km from the Communities.

The operations at each well site include the following activities:

Site preparation operations
- Civil activities including vegetation clearing and well site construction
- Construction of well site ponds, pits, sumps and well cellars

Drilling operations
- Mobilisation of drilling packaged, ancillary services, rig camp, personnel, and supplies
- Conducting drilling activities
- Wireline logging activities
- Well suspension

HFS operations
- Mobilisation of HFS spread personnel and supplies
- Well perforation and clean-up
- HFS treatment
- Well testing operations – use of flare pit
- Well suspension

This assessment takes into account the cumulative noise level of all activities at each of the proposed well sites. For information, Figure 1.1 shows the locations and overall map for the lease.

Operational hours for the site are proposed to be:

- Drilling operations will be 24 hours per day.
- HFS operations (including well testing) with pumps, blender and generators are the highest noise sources and will be running almost 24 hours per day.
- Site preparation operations will be conducted during daylight.

The estimated duration of HFS operations per well is about 10 days. Wells will be drilled and fracked one at a time.

As part of the study, the following was carried out:

- Identification of individual operations and the associated noise levels.
- Measure the ambient noise levels for the area prior to the commencement of works.
- Assess the predicted noise levels at the nearest surrounding noise sensitive premises for compliance with the appropriate criteria.
- If exceedances are predicted, comment on possible noise amelioration options for compliance with the appropriate criteria.

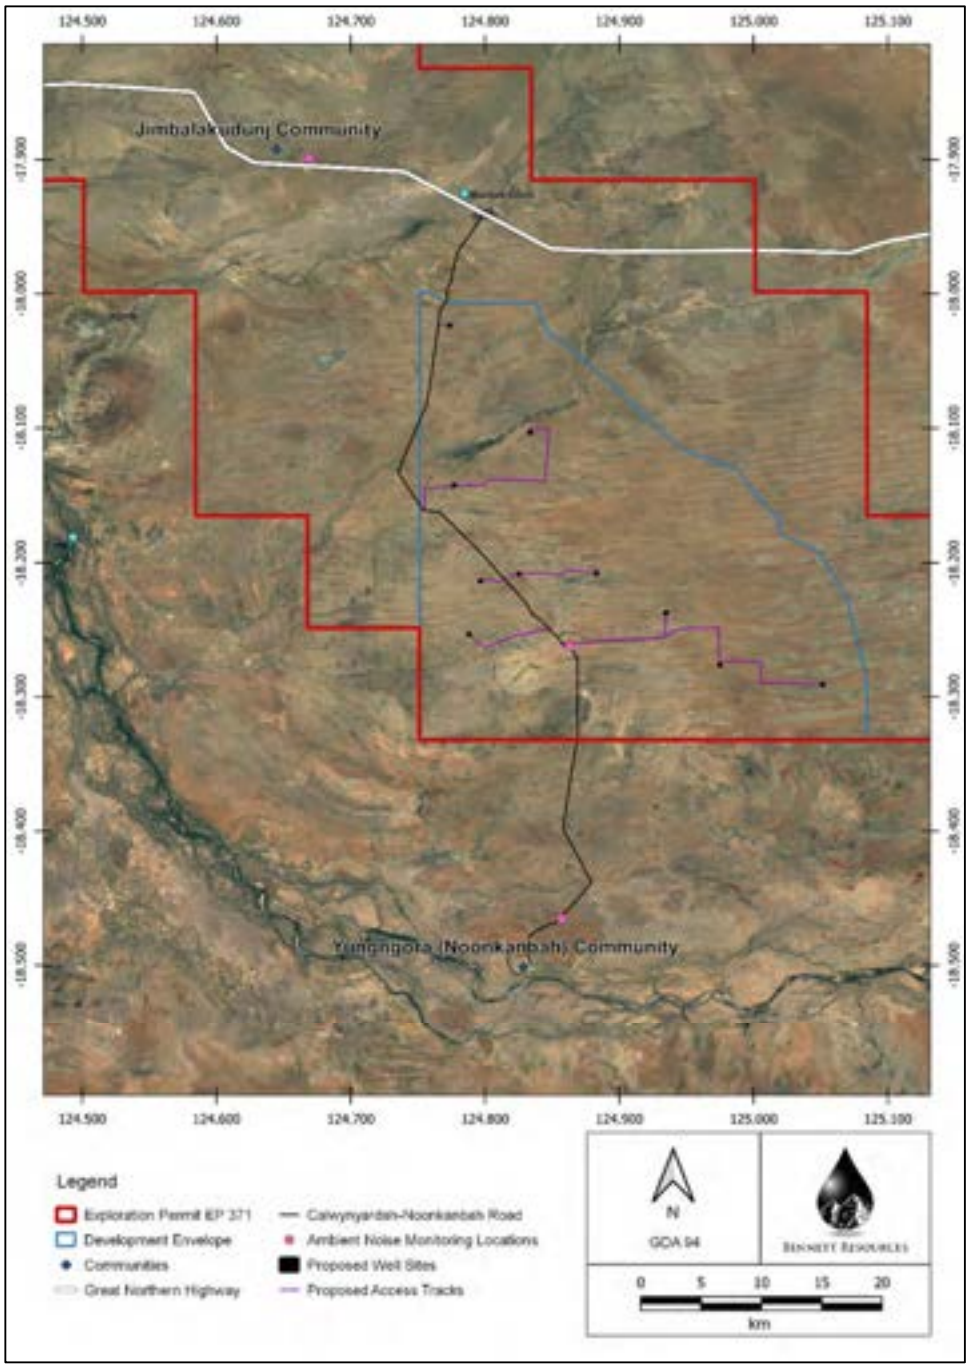

FIGURE 1.1 – SITE AND SURROUNDS

The assessment is provided to support the Environmental Review Document for the referral of the Proposal under Section 38 of the Environment Protection Act 1986.

2. SUMMARY

The assessment has been conducted on the proposed operation at the Valhalla Gas Exploration and Appraisal Program.

The nearest noise sensitive premises are to the north and south of the Development Envelope of the Proposal, being the Jimbalakudunj and Yungnora Communities. Ten proposed well sites form part of the Proposal, with the closest wells being between 20 and 28km from the Communities.

The applicable criterion for this assessment is an L_{A10} of 35 dB(A) at the nearest residential locations, (ie operations during night period).

Noise received at the existing residential premises has been determined, to be less than 10 dB(A) for the operations, for the worst-case operating scenario (i.e. operations at the nearest well to each receiver).

The above noise levels have been considered not to contain tonal characteristics, due to the low level of the noise emissions, (i.e. below background).

Given these operating parameters, noise levels received at the nearest premises has been calculated to comply with the *Environmental Protection (Noise) Regulations 1997* for the operating times as outlined in this assessment.

3. CRITERIA

The allowable noise level for noise sensitive premises in the vicinity of the proposed site is prescribed by the *Environmental Protection (Noise) Regulations 1997*. Regulations 7 and 8 stipulate maximum allowable external noise levels or assigned noise levels that can be received at a premise from another premises. For residential premises, this noise level is determined by the calculation of an influencing factor, which is then added to the base levels shown below. The influencing factor is calculated for the usage of land within two circles, having radii of 100m and 450m from the premises of concern. The base noise levels for residential premises are listed in Table 3.1.

TABLE 3.1 - BASELINE ASSIGNED OUTDOOR NOISE LEVEL

Premises Receiving Noise	Time of Day	Assigned Level (dB)		
		$L_{A\ 10}$	$L_{A\ 1}$	$L_{A\ max}$
Noise sensitive premises	0700 - 1900 hours Monday to Saturday (Day)	45 + IF	55 + IF	65 + IF
	0900 - 1900 hours Sunday and Public Holidays (Sunday / Public Holiday Day Period)	40 + IF	50 + IF	65 + IF
	1900 - 2200 hours all days (Evening)	40 + IF	50 + IF	55 + IF
	2200 hours on any day to 0700 hours Monday to Saturday and 0900 hours Sunday and Public Holidays (Night)	35 + IF	45 + IF	55 + IF

Note: L_{A10} is the noise level exceeded for 10% of the time.
L_{A1} is the noise level exceeded for 1% of the time.
L_{Amax} is the maximum noise level.
IF is the influencing factor.

It is a requirement that received noise be free of annoying characteristics (tonality, modulation and impulsiveness), defined below as per Regulation 9.

"impulsiveness" means a variation in the emission of a noise where the difference between L_{Apeak} and $L_{Amax\ Slow}$ is more than 15 dB when determined for a single representative event.

"modulation" means a variation in the emission of noise that –

(a) is more than 3dB $L_{A\ Fast}$ or is more than 3 dB $L_{A\ Fast}$ in any one-third octave band;
(b) is present for more at least 10% of the representative assessment period; and
(c) is regular, cyclic and audible;

"tonality" means the presence in the noise emission of tonal characteristics where the difference between –

(a) the A-weighted sound pressure level in any one-third octave band; and
(b) the arithmetic average of the A-weighted sound pressure levels in the 2 adjacent one-third octave bands,

is greater than 3 dB when the sound pressure levels are determined as $L_{Aeq,T}$ levels where the time period T is greater than 10% of the representative assessment period, or greater than 8 dB at any time when the sound pressure levels are determined as $L_{A\ Slow}$ levels.

The nearest potential noise sensitive premises to the proposed development have been identified using the area map in Figure 1.1. As there are no major roads or other areas of noise influence, the influencing factor is 0 with the assigned noise levels for operational times are as noted in Table 3.1.

4. MONITORED AMBIENT NOISE

As per the "Draft Guidelines on Environmental Noise for Prescribed Premises" (released in May 2016), continuous noise monitoring has been conducted to establish the ambient noise levels.

Continual ambient noise monitoring was conducted at three locations between the 16th and 23rd August 2021. Figure 4.1 contains a map of the monitoring location.

Appendix 2 contains the ambient noise monitoring data and report.

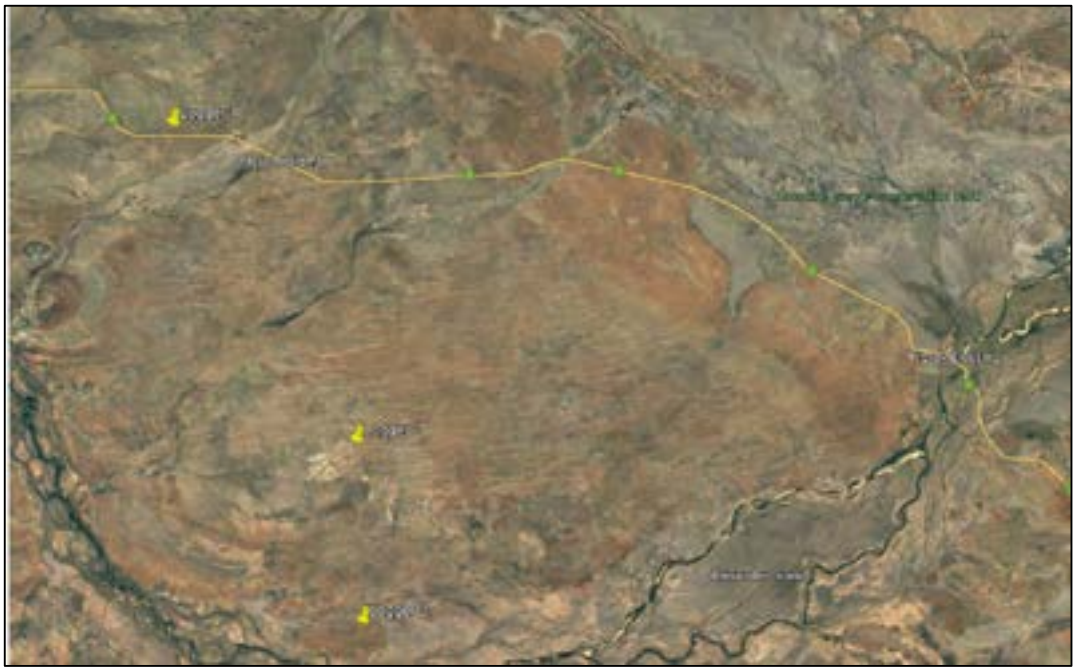

FIGURE 4.1 – NOISE MONITORING LOCATION MAP

5. CALCULATED NOISE LEVELS

Noise received at the nearest neighbouring residential premises, due to noise associated with the proposed operations, was modelled with the computer programme SoundPlan. Sound power levels used for the calculations are based on measured sound pressure levels of similar equipment proposed for use on site.

Given that the project is likely to commence in 4 years, the exact makes/models of equipment is unknown, as the project will be taking bids from multiple vendors.

The HFS spread will be comprised of high-pressure pumps, a blender (mixing unit to blend water, proppant, and chemicals), crane, generators, command centre and coil tubing unit (to clean out well post HFS and prior to well testing).

The modelling of noise levels has been based on noise sources and sound power levels shown in Table 5.1.

TABLE 5.1 – EQUIPMENT SOUND POWER LEVELS DB(A)

Equipment	Quantity	Typical make / model	Example engine type	SWL dB(A)
Frac pump	16	Halliburton Q10	Cat 3512E Tier IV Final 2500 BHP diesel	103
Blender	1	Halliburton FB4K	Cat C32 ACERT Tier IV Final 1225 BHP diesel	107
Wireline truck	1	Synergy 270	Detroit Diesel DD15 Tier IV Final 500 BHP diesel	110
Crane	1	Grove GMK5150	Mercedes OM471LA Tier IV Final 522 BHP diesel	110
Genset	1	Multiquip DCA-300SSCU	Cummins QSL9-G3 350 BHP diesel	108

Based on noise emissions[1] from the above equipment, an overall, worst case operating scenario has been developed. This scenario allows for all equipment to be operating at the same time, at each of the proposed well sites. It is noted that the operations will only be conducted at one well site at a time.

The design layout and site configuration, including source location is shown in Figure 5.1 and 5.2.

FIGURE 5.1 - Above photo is an actual layout from one of the wells completed by the previous operator of the permit within the same project area.

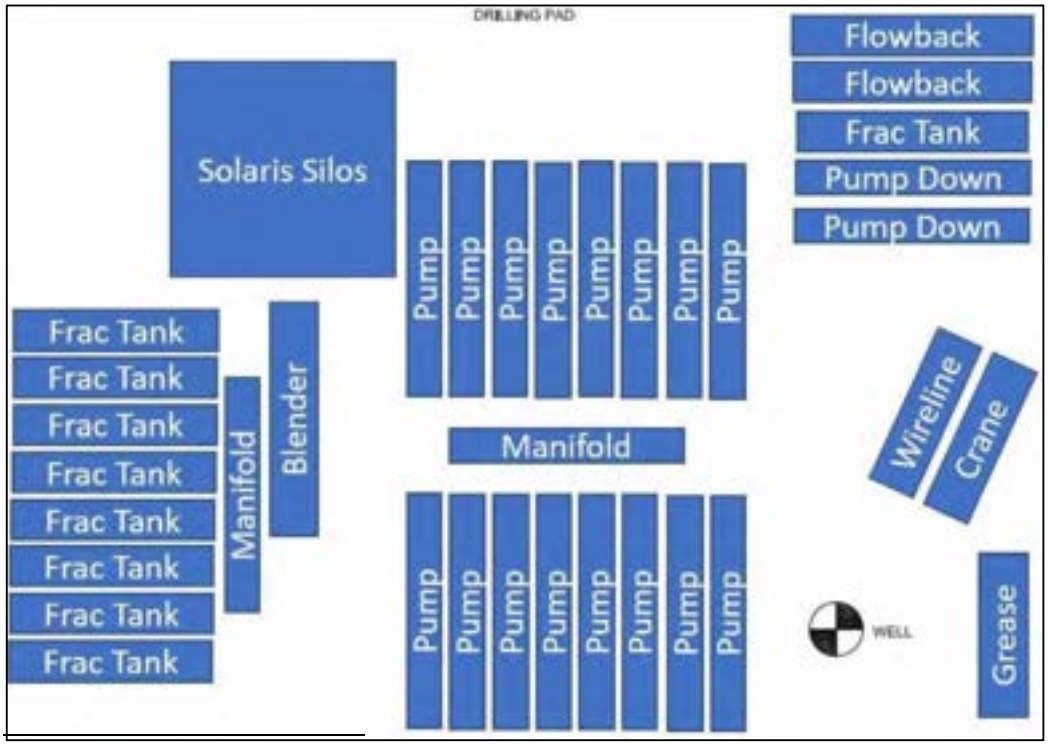

FIGURE 5.2- EXAMPLE OF SITE EQUIPMENT LAYOUT (NOISE SOURCE LOCATION)

The following input data was used in the calculations:

a) Provided plans.

b) Sound Power Levels listed in Table 5.1.

c) Ground contours and receiver point provided by client.

Weather conditions for modelling were as stipulated in the Environmental Protection Authority's "*Draft Guidance for Assessment of Environmental Factors No. 8 - Environmental Noise"* and for the day period are as listed in Table 4.

TABLE 4 – WEATHER CONDITIONS

Condition	Day	Night
Temperature	20°C	15°C
Relative humidity	50%	50%
Pasquill Stability Class	E	F
Wind speed	4 m/s*	3 m/s*

* From sources, towards receivers.

6. RESULTS

Calculated noise levels associated with the noise emissions from the proposed activities for the assumed scenario is summarised below in Table 6.1. Appendix B contains the noise contour plot with an example shown in Figure 6.1 below.

TABLE 6.1 – CALCULATED NOISE LEVEL

Receiver	All Equipment Operating dB(A)
Jimbalakudunj Community	< 10
Yungnora Community	< 10

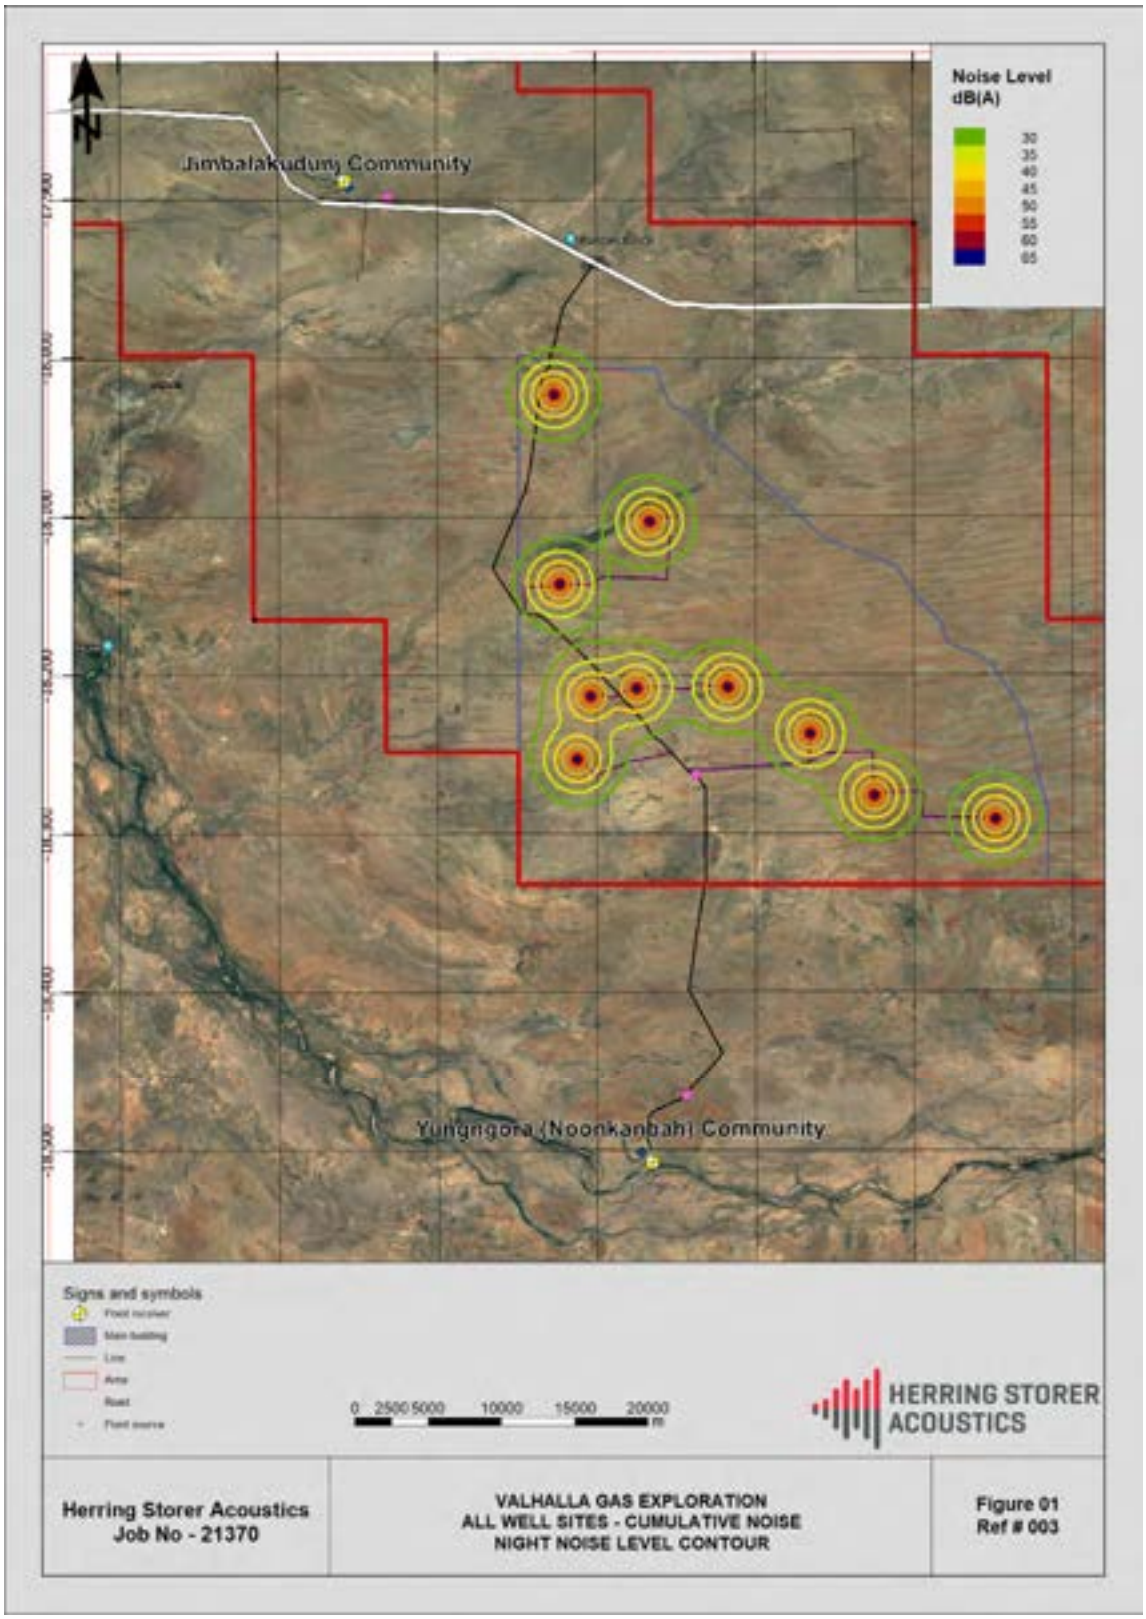

FIGURE 6.1- WORST CASE NOISE LEVEL CONTOUR PLT – ALL WELL SITES

7. ASSESSMENT

Based on calculated noise levels at the nearest premises, noise levels could be considered as not being tonal in characteristics. This is based on the calculated noise levels likely being less than the ambient noise levels.

Hence, Table 7.1 summarises the applicable Assigned Noise Levels, and assessable noise level emissions, for the scenario considered.

TABLE 7.1 – ASSESSMENT OF NOISE LEVELS

Receiver	All Equipment Operating	Time of Day	Assigned Level (dB)
Jimbalakudunj Community	< 10	2200 hours on any day to 0700 hours Monday to Saturday and 0900 hours Sunday and Public Holidays (Night)	35
Yungnora Community	< 10		

The above noise levels all comply with the applicable L_{A10} assigned noise level of 35 dB(A) at the nearest residential locations.

8. CONCLUSION

Assessment has been conducted on the proposed operation at the Valhalla Gas Exploration and Appraisal Program.

The nearest noise sensitive premises are to the north and south of the Development Envelope of the Proposal, being the Jimbalakudunj and Yungnora Communities. Ten proposed well sites form part of the Proposal, with the closest wells being between 20 and 28km from the Communities.

The applicable criterion for this assessment is an L_{A10} of 35 dB(A) at the nearest residential locations, (ie operations during night period).

Noise received at the existing residential premises has been determined, to be less than 10 dB(A) for the operations, for the worst-case operating scenario (i.e. operations at the nearest well to each receiver).

The above noise levels have been considered not to contain tonal characteristics, due to the low level of the noise emissions, (i.e. below background).

Given these operating parameters, noise levels received at the nearest premises has been calculated to comply with the *Environmental Protection (Noise) Regulations 1997* for the operating times as outlined in this assessment.

MEMO

Project:	Valhalla Gas Exploration and Appraisal Program – Baseline Noise Monitoring Survey	**Document No.:**	Mm 001 r01		
To:	Bennett Resources Pty Ltd	**Date:**	29 September 2021		
Attention:	Bennett Resources representatives	**Cross Reference:**	-		
Delivery:	Email	**Project No.:**	20210638		
From:	Ben Wilson	**No. Pages:**	17	**Attachments:**	Yes
Subject:	Baseline noise monitoring data				

The memo outlines the results of a baseline noise monitoring survey carried out for the proposed Valhalla Gas Exploration and Appraisal Program in the Kimberley region of Western Australia.

SURVEY DETAILS

Three noise loggers were deployed by Bennett Resources representatives from 16 – 23 August 2021. The loggers were deployed at sites being used concurrently for air quality monitoring.

The purpose of the survey was to establish existing background noise levels at representative locations around the project site.

Noise environment

Each logger was deployed at a remote rural/outback location. The noise environment was typically characterised by sounds from natural sources (bird song, insects, wind generated noise). It is understood vehicle use on nearby access roads is infrequent and not a dominant contributor to average noise levels.

A constant low-level noise was generated by the co-located air quality monitoring equipment which was only apparent at the quietest periods. The noise monitors were relocated midway through the survey to eliminate any influence of this noise (typically within 20-30 m of the original location).

Equipment details

Table 1 presents the detail of the noise logging equipment used for the survey. The location of each noise logger is also provided. Photos showing the loggers are presented in Appendix D. A map showing the location is provided in Appendix E.

A field calibration check was carried out. No significant change in level was noted for the survey period.

The loggers were configured to continuously measure noise levels at 125 ms intervals (post processed to generate 15-minute logging periods). Measurements were obtained using the slow ('S') response time and A-weighting frequency network for consistency with the *Western Australia Environmental Protection (Noise) Regulations 1997 (the Noise Regulations)* .

The logger microphones were mounted on tripods at a height of approximately 1.2m above ground level in free field conditions.

Weather conditions during the survey period were fine (no rain) and typical for the northern dry season, based on review of the BoM data from the Fitzroy Crossing weather station. Wind speeds during the survey were typically lowest during night-time periods with higher wind speeds during the middle of the day. Site specific conditions can be confirmed by AES.

Table 1: Noise monitoring equipment details

Logger 3	36	28	26	43	34

DISCUSSION

The results show levels that are consistent with remote locations not heavily influenced by human activity. Diurnal patterns typical of urban areas (higher average levels during the day and quieter at night) were not observed. Instead, noise levels were influenced by bird song and insects which are active during the early morning (dawn) and evening/early night periods. Detailed review of the L_{eq} levels for Logger 1 shows that they were likely to be heavily influenced by early morning bird song between 4-6am which may explain why the average night L_{eq} level is higher than the day and evening periods.

Brief periods of elevated levels (spikes in L_{Amax} levels) are likely due to vehicles passing or when birds and insects were located near the microphone (this was confirmed through sampling of audio from logger 3).

Of particular note is the very low levels of background noise at some periods during the night-time, particularly at logger location 3. Background levels (typically quantified using the L_{A90} parameter) fall below 20 dB for some periods at each location (see plots in Appendix C). This is at the quieter end of the range that might typically be expected in a remote location. Background noise at this level will not provide any masking so noise from any industrial or commercial sources could be more noticeable than might be the case in less remote areas with high background noise environments. This may be a relevant consideration during the assessment phase of the project, noting that the lower night-time assigned noise level is L_{A10} 35 dB.

APPENDIX A GLOSSARY OF TERMINOLOGY

Ambient	The ambient noise level is the noise level measured in the absence of the intrusive noise or the noise requiring control. Ambient noise levels are frequently measured to determine the situation prior to the addition of a new noise source.
A-weighting	The process by which noise levels are corrected to account for the non-linear frequency response of the human ear.
dB	Decibel The unit of sound level. Expressed as a logarithmic ratio of sound pressure P relative to a reference pressure of Pr=20 μPa i.e. dB = 20 x log(P/Pr)
dBA	The unit of sound level which has its frequency characteristics modified by a filter (A-weighted) so as to more closely approximate the frequency bias of the human ear.
Frequency	The number of pressure fluctuation cycles per second of a sound wave. Measured in units of Hertz (Hz).
L_{A01}	The noise level exceeded for only 1% of the measurement period, measured in dBA. This is sometimes referred to as the typical maximum noise level.
L_{A10}	The noise level exceeded for 10% of the measurement period, measured in dBA. This is commonly referred to as the average maximum noise level.
$L_{A90\,(t)}$	The A-weighted noise level equalled or exceeded for 90% of the measurement period. This is commonly referred to as the background noise level. The suffix "t" represents the time period to which the noise level relates, e.g. (8 h) would represent a period of 8 hours, (15 min) would represent a period of 15 minutes and (2200-0700) would represent a measurement time between 10 pm and 7 am.
$L_{Aeq\,(t)}$	The equivalent continuous (time-averaged) A-weighted sound level. This is commonly referred to as the average noise level. The suffix "t" represents the time period to which the noise level relates, e.g. (8 h) would represent a period of 8 hours, (15 min) would represent a period of 15 minutes and (2200-0700) would represent a measurement time between 10 pm and 7 am.
L_{Amax}	The A-weighted maximum noise level. The highest noise level which occurs during the measurement period.
Masking Noise	Background noise that is not disturbing, but due to its presence causes other unwanted noises to be less intelligible, noticeable and distracting.
Octave Band	A range of frequencies where the highest frequency included is twice the lowest frequency. Octave bands are referred to by their logarithmic centre frequencies, these being 31.5 Hz, 63 Hz, 125 Hz, 250 Hz, 500 Hz, 1 kHz, 2 kHz, 4 kHz, 8 kHz, and 16 kHz for the audible range of sound.
SPL or L_P	Sound Pressure Level A logarithmic ratio of a sound pressure measured at distance, relative to the threshold of hearing (20 μPa RMS) and expressed in decibels.

APPENDIX B DETAILED RESULTS

Table 5 to Table 13 present the breakdown of average levels for each day. It should be noted that the results for the first day period (Monday 16 August) and last night period (Sunday 22 August) are based on partial periods since data was not collected for the entire period due to deployment and retrieval times.

AUSTROADS Vehicle Classification System

Level 1	Level 2		Level 3	AUSTROADS Classification		
Length (indicative)	**Axles and Axle Groups**		**Vehicle Type**			
Type	**Axles**	**Groups**	**Typical Description**	**Class**	**Parameters**	**Typical Configuration**
	LIGHT VEHICLES					
Short up to 5.5m		1 or 2	**Short** Sedan, Wagon, 4WD, Utility, Light Van, Bicycle, Motorcycle, etc	**1**	d(1) ≤ 3.2m and axles = 2	
Medium 5.5m to 14.5m	3, 4 or 5	3	**Short - Towing** Trailer, Caravan, Boat, etc	**2**	groups = 3 d(1) ≥ 2.1m, d(1) ≤ 3.2m, d(2) ≥ 2.1m and axles = 3, 4 or 5	
	HEAVY VEHICLES					
	2	2	**Two Axle Truck or Bus**	**3**	d(1) > 3.2m and axles = 2	
	3	2	**Three Axle Truck or Bus**	**4**	axles = 3 and groups = 2	
	> 3	2	**Four Axle Truck**	**5**	axles > 3 and groups = 2	
Long 11.5m to 19.0m	3	3	**Three Axle Articulated** Three axle articulated vehicle, or Rigid vehicle and trailer	**6**	d(1) > 3.2m, axles = 3 and groups = 3	
	4	> 2	**Four Axle Articulated** Four axle articulated vehicle, or Rigid vehicle and trailer	**7**	d(2) < 2.1m or d(1) < 2.1m or d(1) > 3.2m axles = 4 and groups > 2	
	5	> 2	**Five Axle Articulated** Five axle articulated vehicle, or Rigid vehicle and trailer	**8**	d(2) < 2.1m or d(1) < 2.1m or d(1) > 3.2m axles = 5 and groups > 2	
	≥ 6	> 2	**Six Axle Articulated** Six axle articulated vehicle, or Rigid vehicle and trailer	**9**	axles = 6 and groups > 2 or axles > 6 and groups = 3	
Medium Combination 17.5m to 36.5m	> 6	4	**B Double** B Double, or Heavy truck and trailer	**10**	groups = 4 and axles > 6	
	> 6	5 or 6	**Double Road Train** Double road train, or Medium articulated vehicle and one dog trailer (M.A.D.)	**11**	groups = 5 or 6 and axles > 6	
Large Combination Over 33.0m	> 6	> 6	**Triple Road Train** Triple road train, or Heavy truck and three trailers	**12**	groups > 6 and axles > 6	
Definitions:

Group: Axle group, where adjacent axles are less than 2.1m apart

Groups: Number of axle groups

Axles: Number of axles (maximum axle spacing of 10.0m)

d(1): Distance between first and second axle

d(2): Distance between second and third axle

1 Executive summary

This Greenhouse Gas Environmental Management Plan (GHGEMP) has been prepared by Bennett Resources (BNR) to support the assessment, approval and implementation of the Valhalla Gas Exploration and Appraisal Program (the Proposal) under Part IV of the *Environmental Protection Act 1986* (EP Act).

Bennett Resources referred the Proposal to the Environmental Protection Authority (EPA) under Part IV of the EP Act on 24 December 2020 (EPA Assessment Number 2281). The EPA has decided to assess the Proposal at a level of Public Environmental Review.

This GHGEMP has been written in accordance with the "Instructions on how to prepare Environmental Protection Act 1986 Part IV Environmental Management Plans" (EPA 2021a), the Greenhouse Gas Emissions Environmental Factor Guideline (EPA 2023) and the GHG EMP Template (EPA 2023). An executive summary of this GHGEMP is provided in Table 1-1.

Table 1-1: Executive summary of the GHGEMP

Proposal title	Valhalla Gas Exploration and Appraisal Program (EPA Assessment Number 2281)
Proponent name	Bennett Resources Pty Ltd
Proposal Description and Scope	The Proposal is to complete an unconventional exploration and appraisal drilling and hydraulic fracture stimulation (HFS) program on Petroleum Exploration Permit EP 371 in the Canning Basin.
Purpose of the GHGEMP	The purpose of this GHGEMP is to support the assessment, approval, and implementation of the Proposal under Part IV of the EP Act, and to provide management and monitoring actions for Greenhouse Gas (GHG) emissions resulting from the Proposal that are aligned with the intent of BNR's Climate Change Policy, and the Western Australian Government Climate Policy (WA Government 2020). Monitoring of greenhouse gas emissions will be undertaken in accordance with the Valhalla Monitoring Plan.
Emissions estimates	It is expected that the proposal will comprise scope 1 emissions only. During phase one, maximum emissions will be <200,000 tCO_2e/year During phase two, maximum emissions will be <600,000 tCO_2e/year A maximum emissions estimate for the full program is 1,603,293 tCO_2e.
Trajectory of emissions reductions	In alignment with BNR's Climate Change Policy (Appendix A) and the requirements of ESD Item 78, the long-term environmental outcome is to avoid, reduce, or mitigate 100% of scope 1 GHG emissions by 2050. This GHG EMP commits to avoid, reduce, or mitigate 43% of scope 1 GHG emissions by the end of year 5 (anticipated to be around 2030). No scope 2 or scope 3 emissions are expected to be produced through this proposal.
Other statutory decision-making processes which require reduction in GHG emissions	The trajectory of emissions, which is expected to reduce to zero after seven years from the commencement of the proposal, is consistent with the EPA's GHG objective to reduce net GHG emissions in order to minimise the risk of environmental harm associated with climate change, and with ESD item 78.
Key components in the GHEGEMP	The long-term environmental outcome for this GHGEMP is to avoid, reduce, or mitigate 100% of Scope 1 GHG emissions from the Proposal by 2050. This long-term outcome is supported by a single interim environmental outcome of the GHGEMP, to avoid, reduce, or mitigate 43% of Scope 1 GHG emissions from the Proposal by the end of the 5th year of the Proposal. These environmental GHGEMP outcomes and their associated indicators, response actions, monitoring and reporting requirements, are defined in Table 5-1 and Table 5-2.
GHGEMP reviews and reporting	This GHGEMP is intended to be dynamic and may be updated to reflect changes in management practices and the natural environment over time. It will be reviewed on a five-yearly cycle.
Proposed construction / commencement date	TBC – within Calendar Year 2025.

EMP required pre-construction / commencement?	Yes ☒ No ☐
Proposed project end of life/decommissioning date	TBC – within Calendar Year 2032

2 Context, scope and purpose

2.1 Proponent, Proposal Description and Scope

Bennett Resources Pty Ltd (BNR), a wholly owned subsidiary of Black Mountain Energy Pty Ltd, is the proponent for the Proposal.

The Proposal is to complete an unconventional exploration and appraisal drilling and Hydraulic Fracture Stimulation (HFS) program within Petroleum Exploration Permit EP 371 (EP 371) in the Canning Basin, within the Shire of Derby / West Kimberley in Western Australia (WA).

The intent of the Proposal is to evaluate the large tight gas resource in the region which has the potential to offer long-term energy security to Australia. The onshore Canning Basin is an early Ordovician to early Cretaceous aged geological basin that covers approximately 430,000 km^2 in the West Kimberley region. The Proposal is targeting hydrocarbons present from the Laurel through to the Devonian Formations, ranging from 2,000 m to 5,000 m below ground level. The main target is the Laurel Formation, with hydrocarbons present at depths between 2,000 m and 4,000 m below ground level.

Table 2-1 provides a summary of the Proposal.

Table 2-1: Summary of the Proposal

Proposal title	Valhalla Gas Exploration and Appraisal Program (EPA Assessment Number 2281)
Proponent name	Bennett Resources Pty Ltd (BNR)
Short description	The Proposal is to undertake an unconventional exploration and appraisal drilling program within EP 371, located in the Canning Basin, West Kimberley of Western Australia. The Proposal includes the construction of up to 20 exploration wells within 10 well sites. The intent of the Proposal is to further appraise the extent of the tight gas reservoir in the Laurel Formation with hydrocarbon shows present at depths in the order of 2,000 m to 4,000 m below ground level. The exploration and appraisal program is expected to commence in 2024 or 2025.
Purpose of the GHGEMP	To meet the Environmental Scoping Document (ESD) Item 78: *Provide a greenhouse gas management plan, in accordance with EPA guidance, which demonstrates the proposal's trajectory towards net zero emissions by 2050.* The goal of ensuring new zero emissions by 2050 is in line with the Western Australian Government's Climate Policy, released in November 2020, which commits the government to working with all sectors of the economy to achieve net zero greenhouse gas emissions by 2050.

2.2 Purpose of the GHGEMP

The purpose of this GHGEMP is to support the assessment, approval, and implementation of the Proposal under Part IV of the EP Act, and to provide management actions for Greenhouse Gas (GHG) emissions resulting from the Proposal that are aligned with the intent of BNR's Climate Change Policy, and the Western Australian Government Climate Policy (WA Government 2020). Monitoring of greenhouse gas emissions will be undertaken in accordance with the Valhalla Monitoring Plan.

The elements have been identified as having the potential to affect the Key Environmental Factor – Greenhouse Gas Emissions include:

- well testing (resulting in gas and condensate flaring)
- diesel fuel usage
- land clearing and fugitive emissions.

BNR has developed this GHGEMP to meet the Environmental Scoping Document (ESD) Item 78:

> *Provide a greenhouse gas management plan, in accordance with EPA guidance, which demonstrates the proposal's trajectory towards net zero emissions by 2050.*

The goal of ensuring new zero emissions by 2050 is in line with the Western Australian Government's Climate Policy, released in November 2020, which commits the government to working with all sectors of the economy to achieve net zero greenhouse gas emissions by 2050.

3 GHGEMP components

This section of the GHGEMP identifies the emissions estimates, trajectory of emissions reductions and mitigation measures adopted to avoid, reduce or offset emissions.

3.1 Emissions estimates

3.1.1 Scope 1 emissions

An emissions inventory of direct Scope 1 GHG emissions is provided in Table 3-1 The methodologies used to calculate this inventory are provided in Appendix B. As detailed in Appendix B, the main sources of Scope 1 GHG emissions are (per well):

- gas and condensate flaring, comprising up to approximately 88,428 tCO_{2-e} (or 93.1%) of Scope 1 GHG emissions
- diesel fuel usage, comprising up to approximately 3,300 tCO_{2-e} (or 6.3%) of Scope 1 GHG emissions
- land clearing and fugitive emissions, comprising up to approximately 337 tCO_{2-e} (or 0.6%) of Scope 1 GHG emissions.

Table 3-1: Scope 1 GHG inventory

CO2 emissions per exploration and appraisal well	Input parameter	Phase I – 6 wells (tCO_{2-e})		Phase II – 14 wells (tCO_{2-e})		Calculation reference
		~60 days flaring	~90[1] days flaring	~60 days flaring	~90 days flaring	
Flare (per well)						
Gas	Phase I: 5.9 mmscf/d Phase II: 10.7 mmscf/d	29,747	44,620	53,948	80,921	NGER Guidelines (Government of Australia 2008) Section 3.44
Condensate	Phase I: 118 bbl/d Phase II: 214 bbl/d	2,760	4,140	5,005	7,507	NGER Guidelines (Government of Australia 2008) Section 3.52
Diesel usage (per well)						
Site preparation	20	54	54	54	54	NGER Guidelines (Government of Australia 2008) Section 2.41 with Table in Schedule 1 Part 3.
Drilling operations	316	857	857	857	857	
HFS operations	510	1,382	1,382	1,382	1,382	
Site reinstatement	20	54	54	54	54	
Transport (vehicles/rigs)	344	931	931	931	931	
Site power	8	15	22	15	22	

[1] BNR has estimated that to collect the required data, the well must be flowed during the period of maximum gas concentration for up to 90 days.

CO2 emissions per exploration and appraisal well	Input parameter	Phase I – 6 wells (tCO_{2-e})		Phase II – 14 wells (tCO_{2-e})		Calculation reference
		~60 days flaring	~90[1] days flaring	~60 days flaring	~90 days flaring	
Land clearing (per well)						
Land clearing emissions	5.1 ha per well 56.3 tCO2-e/ha	287	287	287	287	FullCAM Model (Australian Government 2020)
Fugitive emissions (per well)						
Drill cuttings	Gas 0.12 tonnes	30	30	30	30	Based on volumes of drill cuttings and Valhalla gas saturation
Waste water	2 ML produced formation water	20	20	20	20	API GHG Emissions Methodologies for Oil and Gas (API 2009)
Total GHG emissions per well (tCO2-e)		**36,136**	**52,936**	**62,582**	**92,065**	**Scope 1 (direct emissions)**
Total emissions exploration and appraisal program (tCO_2-e)	Phase I–6 wells Phase II–14 wells	216,814	314,378	876,144	1,288,915	Scope 1 (direct emissions)

To understand annualised emissions totals, an emission timeline has been developed for the Proposal. This is based upon the assumption that Phase I will take three years and Phase 2 will take an additional four years. Figure 3-1 provides annual GHG emission forecasts for the Proposal.

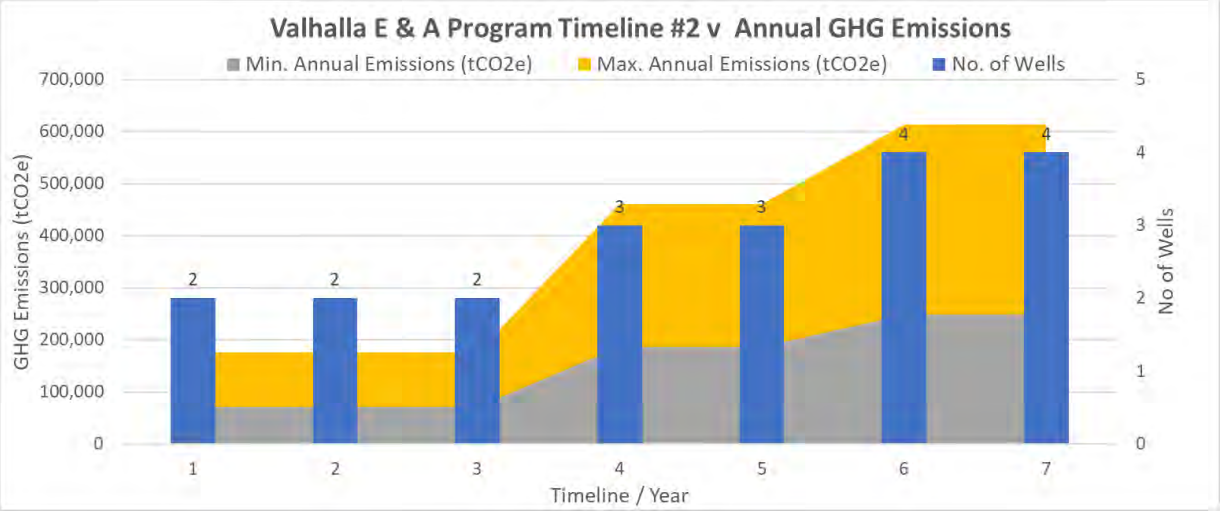

Figure 3-1: Timeline for overall scope 1 GHG emissions of the Valhalla E&P Program

3.1.2 Scope 2 emissions

As the Proposal does not intend to import power from third parties, no Scope 2 emissions are expected.

3.1.3 Scope 3 emissions

Although no Scope 3 emissions are expected, BNR is maintaining the possibility of selling condensate collected during the well test program to third parties as a recommended GHG mitigation measure. Through the implementation of this mitigation, BNR would avoid emissions associated with flaring of condensate during well testing. The quantity of Scope 3 emissions associated with the transportation and utilisation of condensate as a fuel was calculated on the basis that all condensate produced from the well tests for a maximum 90-day test period was captured and transported to Singapore via Wyndham where it was assumed to be processed and consumed. The Scope 3 emission inventory is provided as Table 3-2.

Table 3-2: Scope 3 GHG inventory

Scope 3 emissions per well	~60 days flaring	~90 days flaring
Condensate Volume (bbls)	222,240	333,360
Condensate Transport Emissions (tCO_2e)	13,952	20,928
Condensate Consumption Emissions (tCO_2e)	91,571	137,356
Total Scope 3 Emissions (tCO_2e)	105,523	158,284

3.2 GHG emissions benchmarking

As required under ESD Item 77, BNR completed an emissions benchmarking assessment to understand how the Proposal compares to other HFS projects. Specifically, BNR benchmarked the Proposal emissions against the following projects:

- Buru – Canning Basin – TGS14 Project
- Origin – Betaloo Basin – Valkerri Project
- Origin – Betaloo Basin – Kyalla Project
- Santos – McArthur Basin EP161 Project
- Imperial – McArthur Basin – Carpinteria 1.

In order to benchmark projects for their GHG emissions, typically, GHG emissions intensity values are calculated on a 'tCO_2e per tonne of product' basis for manufacturing projects or 'tCO_2e per kWh' basis for power generation projects such that project emissions can be compared. GHG emission intensities from gas exploration projects can be compared on both a 'per well per test day' and 'per well test' basis to benchmark the Proposal.

GHG emissions intensities on a 'per well per test day' basis for the Proposal is shown in Figure 3-2. The results indicate more emissions from the Valhalla well tests per day are expected due to the higher well test flow rates per day.

It should be noted that the Origin and Santos test programs are planned for a significantly longer period, up to 12 months compared to 2-3 months for the Valhalla Gas Exploration and Appraisal Proposal. Therefore, another comparison was made based on the planned minimum and maximum total emissions per well. Figure 3-3 provides planned total emissions per well. The results indicate that wells associated with Phase I of the Proposal are comparable with the permitted / planned total emissions of other projects in the Beetaloo Basin in the Northern Territory. Phase II wells from this Proposal are higher than the other projects due to their potentially higher flow test rates.

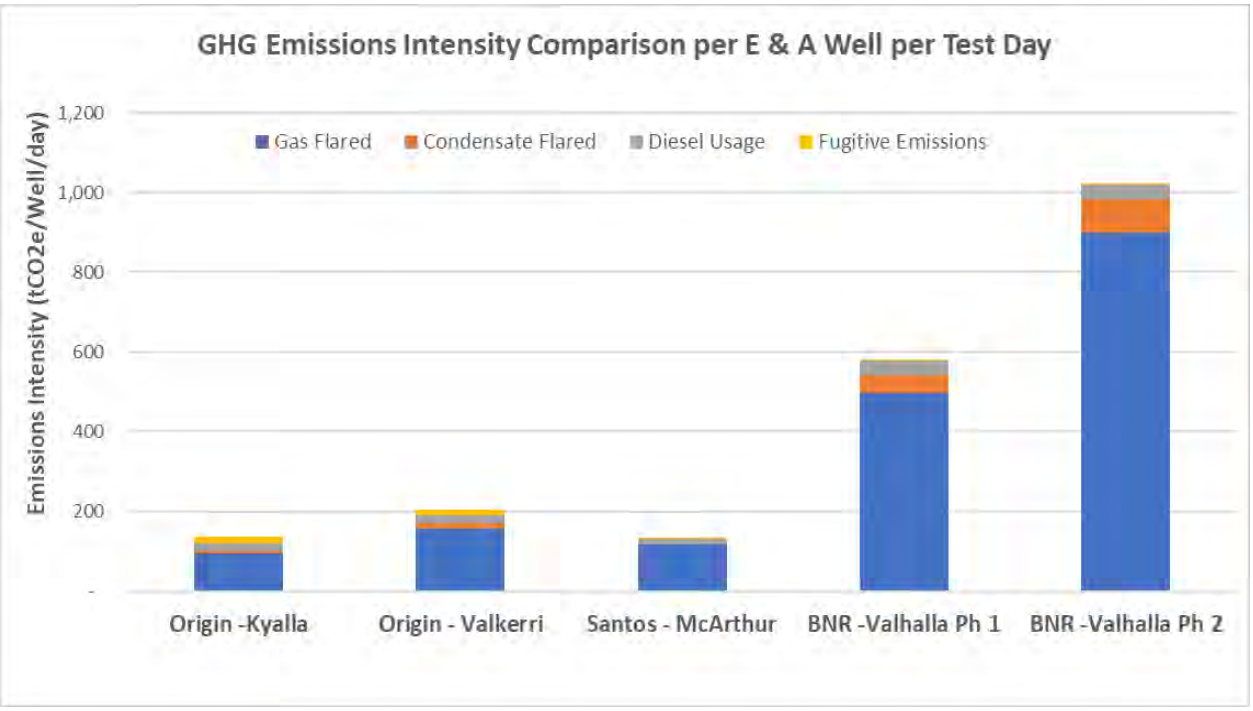

Figure 3-2: Benchmarking GHG emissions of the Valhalla Gas Exploration and Appraisal Program per well per test day

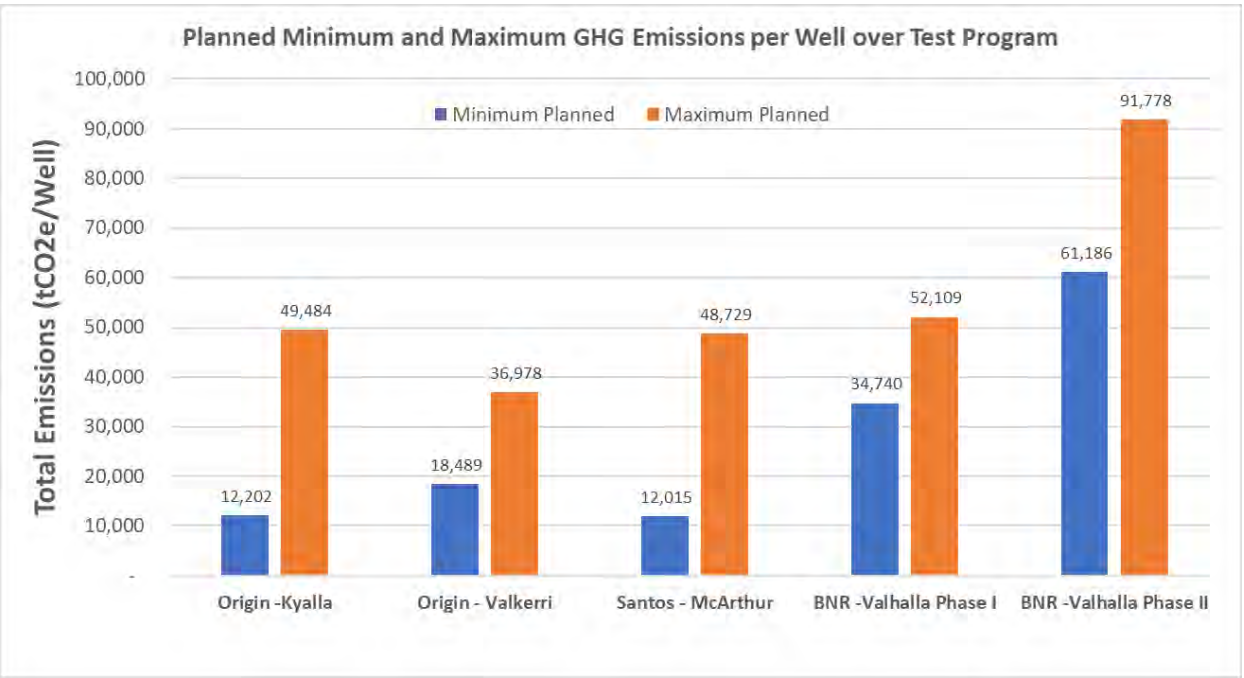

Figure 3-3: Benchmarking GHG emissions of the Valhalla Gas Exploration and Appraisal Program for planned total emissions per well

.

3.3 Trajectory of emissions reductions

BNR considers the use of an outcome based GHGEMP appropriate as GHG emissions can be, and are required to be, measured and/or quantified. Monitoring of GHG emissions will enable BNR to inform future field plans whilst demonstrating if interim and long-term environmental outcomes have been met. Given the nature of the Proposal which is limited to a seven-year exploration program, BNR plans to use the information gathered during this to inform GHG abatement opportunities for future field development.

In alignment with BNR's Climate Change Policy (Appendix A), the Western Australian Climate Policy (DWER 2020) and the requirements of ESD Item 78, the long-term environmental outcome for this GHGEMP is to avoid, reduce, or mitigate 100% of Scope 1 GHG emissions by 2050.

To support this long-term environmental outcome, the following interim outcome has been defined for this GHGEMP: to avoid, reduce, or mitigate 43%[2] of Scope 1 GHG emissions by the end of the year five (Figure 3-4).

On the basis that this GHGEMP will be reviewed on at least a five-yearly cycle (Section 7), the interim and long-term environmental outcomes are considered appropriate to meet BNR's and the State government's targets to achieve net zero emissions by 2050.

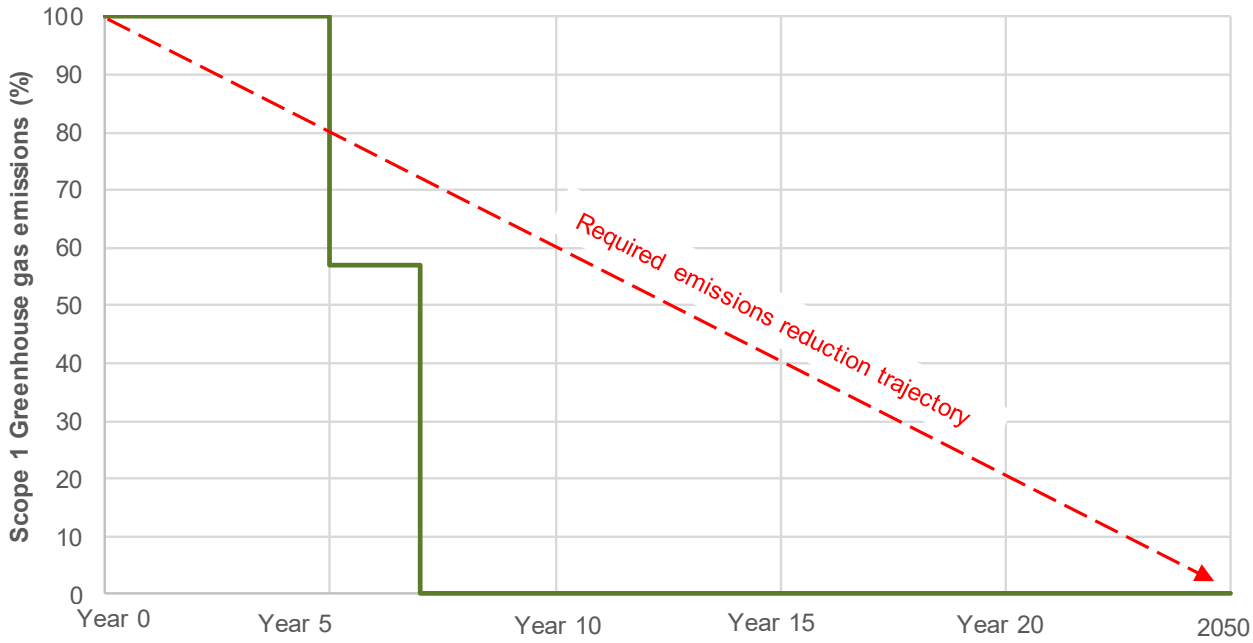

Figure 3-4: GHGEMP environmental outcomes for the Proposal

[2] Australia was a signatory to the Paris Agreement, which entered into force in 2016, and committed to reducing GHG emissions by 26–28% below 2005 levels by 2030. Subsequently, the Climate Change Bill, which passed the Senate in 2022, sets Australia's greenhouse gas emissions reduction targets at a 43% reduction by 2030 and net zero by 2050. Consequently, BNR has updated the interim GHG target with the emission reduction requirements set by the Climate Change Act.

3.4 Mitigation measures adopted to avoid, reduce or offset scope 1 emissions

3.4.1 Consideration of the mitigation hierarchy

In line with the EPA's mitigation hierarchy for GHG emissions (avoid, reduce, or offset) (EPA 2021b), BNR has identified and assessed a range of emission mitigation opportunities. This assessment was facilitated by an independent GHG emissions consultant. The summary of the options and outcomes of the assessment are provided in Table 3-3.

Table 3-3: Emission avoidance and reduction

Option	Description	Estimated tCO2e mitigated for the Proposal	Mitigation hierarchy	Supporting details	Outcome
Well design – Horizontal vs Vertical	Single well pad vertical designs result in significantly more land clearing given the land required to install a single well is the same as that required for multiple wells. The use of efficient multi-well pad horizontal shale development results in a 50%-60% reduction in land use.	2,300 tCO_2e	Avoid	The Valhalla Exploration and Appraisal program utilises 10 well pads for drilling 20 wells, implementing an efficient multi-well drilling technique to minimise land clearing. The minimisation of land clearing reduces the impact associated with GHG emissions associated with the removal of vegetation. A total land cleared for the 20 well program is <110 ha of which 40 ha is associated with the well sites, therefore reducing overall land cleared by around 40%.	Selected
Flaring vs Venting	Gas flaring is carried out in accordance with Code of Practice requirements and as per US EPA 40 Code of Federal Regulations 63.11, with a flare tip combustion efficiency of 98%. Flaring converts methane to carbon dioxide and water, thus significantly reducing methane emissions. Carbon dioxide has a global warming potential 25 times lower than methane over a 100-year span, therefore the removal of methane is preferable.	10,000 tCO_2e	Avoid	Gas venting is avoided during the well completions and well tests and only permitted for operational or safety reasons. Two separate vertical stacks, one for flowback high pressure gas and a second low pressure flare to manage tank vapours (off storage tanks) would be used to ensure all methane at site is flared.	Selected
Selection of efficient diesel generators	The Tier 4 diesel engines have 90% lower NOx and particulate matter emissions compared to Tier 3 engines and are fuel efficient resulting 15% GHG emissions reduction.	25,000 tCO_2e	Reduce	BNR will utilise the latest efficient units with highest emission standards for the Proposal. Specifically, these are currently industry best practice.	Selected
Condensate capture for sale or other use	The well test fluids during the exploration and appraisal program could be passed via a sand trap and 3-phase separator to remove water and condensate from the gas where the condensate could be stored and trucked out of site for sale to a refinery.	129,943 tCO_2e	Avoid	BNR is currently evaluating options for the sale of condensate produced from the well tests via Wyndham Port to Singapore, where Buru Energy already exports its oil.	Under consideration
Renewables (power generation)	The use of renewable energy such as solar photovoltaic (PV) for powering the drilling and HFS activities are impracticable because of	19,740 tCO_2e	Avoid	The solar PV power also needs to be supported with large batteries that can store energy to be supplied during the nights, therefore resulting in significantly higher costs. Furthermore, the rigs and HFS units need to be re-located to various sites	Not considered for use

Option	Description	Estimated tCO2e mitigated for the Proposal	Mitigation hierarchy	Supporting details	Outcome
	the finite period of drilling, and the requirement for continuous drilling.			during the drilling program which will make the use of renewable energy impracticable. A better alternative would be to use grid power, if available, for drilling, while the grid is supported by renewable power. The Canning Basin and Valhalla region do not have such a grid to support the project.	
Renewables (lighting towers)	The use of solar powered lighting units reduces the emissions associated with diesel powered towers.		Avoid	Solar powered lighting towers with battery backup are planned to be used in the project as shown along with other solar power based instrumentation and monitoring systems.	Selected
Gas capture for sale or other use	The Canning Basin does not have any gas infrastructure such that the flow test gas can be treated and sent to a gas pipeline for sale. Therefore, the only possibility would be to capture the gas as Compressed Natural Gas (CNG) or utilising micro Liquified Natural Gas (LNG) facilities and supply it to energy users				
Compressed Natural Gas	The well test gas would be required to be dehydrated and compressed to around 250 bar to be stored in high pressure storage bullets which can then be used in gas engines for power generation in well test sites instead of diesel.	1,398,814 tCO_2e	Avoid	CNG can also be transported to power stations in Broome, Derby and other west Kimberley towns to replace LNG trucked from Karratha at present. CNG could also be used in dual-fuel engines for the drilling and HFS within the Valhalla Gas Exploration and Appraisal Program if equipment with suitable engine specifications is available locally. At present the sale of gas as CNG is considered unviable due the associated cost of capture, treatment and transportation to markets located far from the Valhalla field.	Not selected for use
Micro LNG	A relocatable micro LNG plant could also be used to capture the well head gas (as used in some US shale gas operations) if this equipment were available in the Australian market. The use of micro LNG option would require the well head gas to be pre-treated such that water, CO_2 and freezable heavy hydrocarbons are removed from the gas to allow liquefaction of the gas.			LNG produced can be stored in transportable International Organization for Standardization containers and shipped to markets. CryoboxTM is a micro LNG technology, and other similar flare gas liquefaction technologies that provide relocatable pre-treatment units as used in the US shale gas industry. At present, the sale of LNG to local power stations is considered unviable with existing gas offtake contracts in place with power plant operations and the inability for the project proponents to commit to a fixed volume based on LNG supply contracts from the gas exploration and appraisal program.	Not selected for use

3.4.2 Key assumptions and uncertainties

Table 3-4 details the key assumptions and uncertainties that BNR has identified with respect to the proposed approach to managing GHG emissions.

BNR has proposed environmental outcomes, and associated monitoring and response actions, in consideration of the current state of GHG policies and available technical advice. An adaptive management approach has been proposed that allows for changes to this GHGEMP if required in the future to remain aligned with contemporary policies and scientific advice.

Table 3-4: Assumptions and uncertainties

Assumptions and uncertainties	Comment
Emission estimates	As the Proposal is an exploration and appraisal project, the quantity of emissions estimates is based upon a historic understanding of the Laurel Formation in EP 371. The nature and quantity of emissions may differ to the estimations provided given the purpose of the Proposal is to further understand and evaluate the Laurel Formation.
State and Commonwealth GHG policies	State and Commonwealth government policies and targets continue to evolve.
Market price carbon emissions	At this current time, there is no uniformly applied (i.e. on unit of carbon emitted) market price for carbon emissions (i.e. a carbon levy) within Australia.

3.5 Mitigation measures adopted to avoid, reduce or offset scope 2 emissions

This proposal will not produce scope 2 emissions, so mitigation measures are not required

3.6 Mitigation measures adopted to avoid, reduce or offset scope 3 emissions

Scope 3 emissions are not expected to be produced at this time. However, one of the mitigation measures being considered to reduce scope 1 emissions is to sell condensate through Wyndham to Singapore. This measure would produce more emissions overall (see Table 3 2, above), however would reduce scope 1 emissions. This project has no measures to mitigate scope 3 emissions other than a commitment to adopt best practice, should scope 3 emissions occur due to the sale of condensate.

3.7 Other statutory decision-making processes which require reduction in GHG emissions

The emissions reduction targets as specified in the Climate Change Bill have been considered and adopted within this GHGEMP.

3.8 Consistency with other GHG reduction tools

This GHGEMP is consistent with BNR's climate change policy.

3.9 Offsets

3.10 Overview

Following the mitigation hierarchy, GHG emissions should preferentially be managed via avoidance or reduction measures. However, where further reductions are required, carbon offsets will be considered as a mitigation option. This may include both Australian and international carbon offsets.

BNR acknowledges that carbon offsets may be necessary to meet the environmental outcomes defined within this GHGEMP. Where and when required, BNR will acquire carbon offsets that meet the contemporary Australian acceptability standards (e.g., they should meet offset integrity principles and be based on clear, enforceable, and accountable methods).

At the time of writing, acceptable Australian carbon offsets may include:

- Australian Carbon Credit Units (ACCUs) issued under the Commonwealth Carbon Credits (Carbon Farming Initiative) Act 2011
- eligible offsets under the standard Climate Active Carbon Neutral Standard for Organisations (Climate Active 2020), in addition to ACCUs include:
    - verified emission reductions issued under the Gold Standard
    - verified carbon units issued under the Verified Carbon Standard
    - certified emissions reductions issued as per the rules of the Kyoto Protocol from Clean Development Mechanism projects
    - removal units issued by a Kyoto Protocol country on the basis of land use, land use change and forestry activities under Article 3.3 or Article 3.4 of the Kyoto Protocol.

Many offset projects also deliver social, economic, or environmental outcomes in addition to emission reductions (Climate Active 2019).

3.11 Preferred Offsets and Availability

In the event annual Scope 1 GHG emissions exceed 43 % of the estimated baseline emissions by the end of the 5th year of operations, the purchase of appropriate offsets will be undertaken to reach this outcome. Given the expected GHG emissions for phase one of the project are 52,936 tCO_2e per well, and for phase two 92,065 tCO_2e (Table 3-1), the expected maximum carbon offsets needed, after the fifth year of operations, would be 22,763 tCO_2e/well in phase one, and 39,588 tCO_2e/well in phase two.

BNR expects that ACCUs would be the offsets most likely to be applied to the Proposal, if required, and is confident that sufficient availability will exist. In 2023, 17.2 million ACCUs were issued by the Clean Energy Regulator, with at least 20 million ACCUs expected to be issued in 2024 (CER 2024).

The fastest growing types of ACCU projects are human induced regeneration (HIR) projects which more than doubled between 2022 and 2023, and reforestation projects which increased by 38% over the same period.

3.12 Projects operating beyond 2050

This proposal is expected to be completed within seven years of its commencement, so will not be in operation in 2050.

4 Adaptive Management, Continuous Improvement and Review of the GHGEMP

A monitoring program (as described in Table 5-1 and Table 5-2, and in the Valhalla Monitoring Plan) is required to measure the effectiveness of the response actions as defined in this GHGEMP. The outcomes of the monitoring program will contribute to ongoing improvements in response actions to ensure an adaptive management approach is adopted.

BNR will implement an adaptive management framework that allows BNR to adapt and implement improvements as a result of monitoring against trigger and threshold criteria detailed in this document.

The following approaches will apply:

- monitoring data will be systematically evaluated
- the effectiveness and relevance of trigger level and threshold contingency actions will be evaluated to determine if any changes to response actions are required
- increased understanding of the hydrogeological regimes based on additional internal and external studies will be incorporated into the monitoring and management approach when newer relevant information becomes available where applicable.

Adaptive management practices that will be assessed as part of this approach may include:

- evaluation of the monitoring program, data and comparison to baseline data and reference sites on an annual basis to verify whether responses to project activities are the same or similar to predictions
- evaluation of assumptions and uncertainties of the management and monitoring program
- re-evaluation of the risk assessment and revision of risk-based priorities as a result of monitoring outcomes
- review of data and information gathered over the review period that has increased understanding of site environment in the context of the regional ecosystem
- assessment of changes which are outside the control of the project and the response actions identified.

5 Reporting

This section of the GHG EMP identifies the legal provisions (components) that BNR will implement to ensure that the environmental outcomes are met during implementation of the Proposal.

In accordance with the guideline “Instructions on how to prepare Environmental Protection Act 1986 Part IV Environmental Management Plans” (EPA 2021), this section identifies the indicators that will be used to measure performance and the monitoring that will be undertaken in relation to these indicators. It defines the response actions (trigger level and contingency actions) that will be undertaken if the indicators are exceeded.

Table 5-1 and Table 5-2 detail the components of this GHGEMP for each of the interim and long-term environmental outcomes.

BNR will report annually and will make reports publicly available on its website.

Table 5-1: GHG EMP components – Interim 1 environmental outcome

EPA factor/s and objective/s	GHG Emissions – To reduce net GHG emissions to minimise the risk of environmental harm associated with climate change			
GHG EMP outcome/s	Interim 1: To avoid, reduce, or mitigate 28% of Scope 1 GHG emissions from the Proposal by the end of the 5th year of operations			
Key environmental values	**Carbon budget**			
Key impacts and risks	Contribution to Western Australia's GHG emissions, contribution to climate change and the risks to the environment from climate change			
Indicators	Response actions	Monitoring	Timing and Frequency	Reporting
Trigger criteria Annual Scope 1 GHG emissions from the Proposal are above the estimated baseline emissions: • Phase I (>52,936 tonne per well CO_2-e). • Phase II (>92,065 tonne per well CO_2-e).	**Trigger level action** If annual Scope 1 GHG emissions are above the estimated baseline emissions, then an investigation into the cause of the increased emissions will be undertaken and completed within the subsequent 12-month period and corrective actions implemented.	**Indicator** Scope 1 GHG emissions. **Method** GHG emissions will be monitored via various means including diesel inventories and flow meters.	• Diesel inventories will be maintained for all well sites on an annual basis. • Quantity of GHG associated with flaring activities will monitored continuously. • Total Scope 1 GHG emissions will be calculated annually (based on financial year schedule) during operations.	Routine reporting – Annual Compliance Assessment Report to the DWER Compliance Brach Exceedance reporting to DWER Compliance Branch – exceedance of the threshold criteria and contingency actions that have been implemented – within 5 days.
Threshold criteria Annual Scope 1 GHG emissions from the Proposal are not 43% below the estimated baseline emissions by the end of the 5th year of operations. • Phase I (>30,174 tonne per well CO_2-e). • Phase II (>52,477 tonne per well CO_2-e).	**Threshold contingency actions** If annual Scope 1 GHG emissions are not 43 % below the estimated baseline emissions by the end of the 5th year of operations, then: • within the subsequent 6-month period, net emissions for the Proposal will be decreased by the purchase of appropriate offsets to reduce Scope 1 emissions to at or below 57% of the estimated baseline emissions • net emissions for the Proposal will be maintained at or below 57 % of the estimated baseline emissions (by reductions or offset purchases) until the Proposal is complete.			

Table 5-2: GHG EMP components – Long-term environmental outcome

EPA factor/s and objective/s	GHG Emissions – To reduce net GHG emissions to minimise the risk of environmental harm associated with climate change			
GHG EMP outcome/s	Long-term: To avoid, reduce, or mitigate 100% of Scope 1 GHG emissions from the Proposal by 2050			
Key environmental values	**Carbon budget**			
Key impacts and risks	Contribution to Western Australia's GHG emissions, contribution to climate change and the risks to the environment from climate change			
Indicators	Response actions	Monitoring	Timing and Frequency	Reporting
Threshold criteria Annual Scope 1 GHG emissions from the Proposal are not 43% below the estimated baseline emissions by the end of the 5th year of operations. • Phase I (>30,174 tonne per well CO_2-e). • Phase II (>52,477 tonne per well CO_2-e). Methane levels above the detection limit (i.e. the laboratory LOR) of 3.3 mg/m^3 following the completion of the Proposal.	**Threshold contingency actions** If annual Scope 1 GHG emissions are not 100 % below the estimated baseline emissions by FY 2050 of operations, then: • within the subsequent 6-month period, net emissions for the Proposal will be decreased by the purchase of appropriate offsets to reduce Scope 1 emissions to at or below 0 tpa CO_2-e • net emissions for the Proposal will be maintained at 0 tpa CO_2-e (by reductions or offset purchases) for the life of the Proposal. If methane levels above the detection limit (i.e. the laboratory LOR) of 3.3 mg/m^3 are recorded following the completion of the Proposal, implementation of contingency measures will occur within 30 days of the exceedance including: • identify the reason for the exceedance and determine direct correlation to well site fugitive gas emissions, existing land use, or natural variation and review management measures with an adaptive management response • re-examine monitoring results (QA/QC) to validate data. • where the exceedance was not caused by the assets, no further action required • where the threshold exceedance can be attributed to the assets, implement adaptive management response that may include investigating assets to confirm if gas leakage is occurring and determine how leakage can be remediated, remediate assets to prevent further gas leakage and fugitive emissions, continue sampling/monitoring post remediation until at least two consecutive results reflect no significant deviation from ambient (baseline) samples.	**Indicator** Scope 1 GHG emissions. Methane emissions **Method** GHG emissions will be monitored via various means including diesel inventories and flow meters. In accordance with the Valhalla Monitoring Program, methane levels will be sampled at each well site using 24-hour air canisters. The location of methane emission monitoring will be based upon the location of the potential fugitive methane emissions arising post-activity.	• Diesel inventories will be maintained for all well sites on an annual basis. • Quantity of GHG associated with flaring activities will be monitored continuously. • Total Scope 1 GHG emissions will be calculated annually (based on financial year schedule) during operations. • Biennial methane sampling (pre-impact and post activity) at each well	Routine reporting – Annual Compliance Assessment Report to the DWER Compliance Brach

6 Stakeholder consultation

Consistent with the EPA's expectations for this GHGEMP to align with the principles of environmental impact assessment, BNR consulted with stakeholders during the development of the EPA referral. Engagements relevant to this GHGEMP are presented below in Table 6-1.

Table 6-1: Stakeholder engagement relevant to this GHGEMP

Stakeholder	Method of engagement	Date of engagement	Summary of engagement
EPA	Meeting	24 Nov 2021	Discussed the Environmental Management Plan (EMP) guidelines and new structure.
EPA	Email correspondence	8 May 2024	GHG EMP guidelines and new structure

For a full summary of stakeholder engagement records refer to the BNR Environmental Review Document (BNR_HSE_MP_013).

Any additional consultation regarding this GHGEMP will be captured in subsequent revisions.

7 Changes to GHGEMP

This GHGEMP is intended to be dynamic and may be updated to reflect changes in management practices and the natural environment over time. It will be reviewed on a five-yearly cycle. This approach will allow flexibility to adopt new approaches / management measures. The effectiveness and relevance of trigger level and threshold contingency actions will be evaluated on an annual basis, and any amendments to response actions will be completed on an as-needed basis. This will include:

- amendment of response actions that are not achieving the desired outcomes
- monitoring that identifies additional impacts requiring additional response actions or changes to existing response actions
- changes to relevant legislation that may affect the implementation of response actions
- improvements to management practices to achieve a greater environmental outcome
- updates to trigger and threshold criteria following the completion of baseline sample collection prior to commencing any groundwater extraction.

Specifically, a table summarising the changes following the template provided as Table 7-1 will be developed. This table will clearly indicate location and reason/s for changes. A tracked change version of the revised GHGEMP will be provided for all minor, non-structural changes to the document.

Table 7-1: GHGEMP review template

Complexity of changes	Minor revisions ☐		Moderate revisions ☐		Major revisions ☐
Date revision submitted to EPA	DD/MM/YYYY				
Is the change proposed to be implemented under condition C3-3? If so, the proponent must provide a copy to the CEO at least 20 days before commencing implementation			Yes ☐		No ☐
Proponent's operational requirement timeframe for approval of revision	< One Month ☐		< Six Months ☐	> Six Months ☐	None ☐
Reason for Timeframe					

Item number	GHGEMP section number	GHGEMP page number	Summary of change	Reason for change	New or increased adverse impacts to the environment? Risk to the achievement of limits, outcomes or objectives?

Appendix A BNR Climate Change Policy

CLIMATE CHANGE POLICY

Black Mountain Exploration (BME) is committed to achieve the best possible balance between economic development and protection of the environment.

BME acknowledges the scientific consensus on climate change and the diverse effects that climate change may have on its customers, businesses, the economy and the communities in which it operates.

BME recognises that business has an important role to play in addressing climate change, and that its actions may deliver economic, social and environmental benefits over the long term. BME is committed to proactively managing the risks and to realising business opportunities associated with climate change. This policy applies to all BME activities.

BME will achieve net zero by 2050 by:

- Identifying opportunities to reduce Scope 1, 2 and 3 emissions through investments in research and technology, alternate energy sources, transport efficiency and process optimisation;
- Identifying and prioritising opportunities to leverage existing proven technology in renewable energy to reduce carbon emissions from power consumption;
- Exploring opportunities to minimise our consumption and contribution to waste;
- Adopting technology improvements as they become available and reasonably practicable to apply;
- Continuing to assess the acquisition or development of projects that have the potential to contribute to decarbonisation locally and globally (including offsets);
- Wherever possible and practicable, driving BME's emissions per unit of production below the mean of comparable peers;
- Being an active participant in various industry working groups; and
- Ensuring adequate resources are available to implement this policy including developing a broad ranging education and awareness campaign for our workforce and developing measures that will help guide our progress.

BME will strive to protect the environment and create sustainable businesses for future generations.

It is the responsibility of all employees, contractors and suppliers to comply with the requirements of this policy.

It is the responsibility of managers and supervisors to ensure this policy is implemented, reinforced and maintained through active leadership.

Executive Summary

The Valhalla Gas Exploration and Appraisal Program (Proposal) was referred to the EPA by Bennett Resources (BNR) under section 38 of the WA Environmental Protection Act 1986 (EP Act) on 24 December 2020. The EPA determined that the Proposal should be assessed under Part IV of the EP Act at the level of assessment of Public Environmental Review on 3 February 2021.

As part of the review the EPA has provided a draft Environmental Scoping Document that requires the Proposal EIA documentations to include detailed estimates of greenhouse gas emissions (Scope 1, Scope 2 and Scope 3), a benchmarking exercise comparing emissions from the Proposal to other similar exploration and appraisal projects, along with a GHG emissions reduction assessment for the Proposal. NimblEng Energy Consultants were contracted by BNR to complete these tasks such that it can form part of the GHG Management Program for the EPA submission. The GHG emissions estimations were carried out based on updated Proposal information. The key changes compared to the 2020 Referral relates to the following which has led to a marked increase in GHG emissions:

- introducing options to the time period for the two proposed phases, with Phase I consisting of 6 wells drilled over 1-3 years and Phase II consisting of 14 wells drilled over 2-4 years;
- the proposed Well Test rate was increased from 2.5 mmscf/d to 5.9 mmscf/d for the Phase I wells and 10.7 mmscf/d for Phase II for the test period of 60-90 days per well;
- the condensate production was estimated based on condensate to gas ratio of 20 bbls/mmscf resulting in 118 bbl/d in Phase I and 214 bbl/d in Phase II during well testing.

Direct GHG emissions sources from the Proposal (Scope 1) were categorized into the following:

- Land clearing;
- Diesel fuel usage;
- Fugitive emissions; and
- Well Test gas flaring.

GHG emissions from each category was estimated based on accepted methodologies used by the WA EPA and EPA NT for exploration and appraisal projects involving hydraulic fracture stimulation (HFS). The GHG emissions were calculated based on a per well, per day rate and then total emissions were estimated based on the minimum and maximum number of Well Test days. The variable nature of drilling campaigns in an exploration and appraisal program does not allow the project proponents to commit to fixed annual emission rates rather, provide a range of estimated emissions based on the drilling program envisaged. The success of the Phase I program is key to the continuation of the Phase II drilling campaign. Therefore, annual emissions estimates are provided as a 3-year program (Timeline #1) and a 7-year program (Timeline #2) with the minimum and maximum emission each year. The total GHG emissions range from 1,082,000 to 1,592,600 tCO_2e over the 20-well exploration and appraisal program.

A benchmarking exercise comparing direct emissions from the Valhalla Proposal along with three recently approved HFS based exploration projects in the NT was carried out. The results indicate the total emissions from these projects are comparable with Phase I of the Valhalla project, but Phase II emissions remained high due to the higher well test rates planned for the Valhalla Proposal.

GHG Emissions Reduction Assessment for the Proposal was based on number of RECs (Reduced Emissions Completions) proposed by the WA Scientific Inquiry into Fracking and the Code of Conduct in NT. The key focus of the emissions reduction relates to the capture and utilisation of the well test gas and condensate produced. The project proponents are currently evaluating options to export the condensate from the drilling program and capture part of the gas and utilise it in dual fuel engines on site to power the drilling and HFS operations.

In line with meeting the state NetZero 2050 target, the WA EPA has set a NetZero emissions trajectory to reduce or offset emissions on a year-on-year basis for new projects with annual emission of more than 100,000 tCO2e. This report provides a quantitative estimate of GHG emissions that could be considered as above the NetZero 2050 trajectory for the Proposal that would be required to be offset by the proponents. Depending on how the EPA would assess the Valhalla exploration and appraisal program, the Proposal may or may not be required to offset carbon emissions due to the exploratory nature of the Proposal.

1 Background

The Valhalla Gas Exploration and Appraisal Program (Proposal) is located approximately 51 km Northwest of the townsite of Fitzroy Crossing (Shire of Derby-West Kimberley) in the Canning Basin Region in the State of Western Australia. It is located within the Petroleum Lease EP 371. Bennett Resources wholly owns the exploration lease which encompasses the proposed Valhalla Gas Exploration and Appraisal Program in its entirety[1].

The Proposal is to complete an unconventional gas exploration and appraisal drilling and Hydraulic Fracture Stimulation (HFS) program within Petroleum Exploration Permit EP 371 (EP 371). The Proposal includes the construction of up to 20 exploration wells within 10 well sites and is expected to commence in 2023 or 2024. The exploration program will be carried out in two phases where 6 wells will be drilled in the initial phase and based on the results the next 14 wells will be drilled in the second phase of the program.

On 24 December 2020, the Proposal was referred to the Environmental Protection Authority (EPA) under Section 38 of the Environmental Protection Act 1986. The Chairman of the EPA determined that the Proposal was required to be assessed via a Public Environmental Review. Subsequently, the EPA Services drafted an Environmental Scoping Document (ESD), which is yet to be finalised. The draft ESD provides details on the requirements to conduct GHG estimates (scopes 1, 2 & 3) and an Emissions Reduction Assessment for the Proposal. The assessment will inform (and be presented in) the Valhalla Environment Review Document (ERD)and GHG Management Plan (GHGMP).

1.1 Study Objective

The aim of this study is to provide a Greenhouse Gas emission estimate review and emissions reduction assessment for the Valhalla Gas Exploration and Appraisal Program. The study will address the following:

- Review of the GHG estimates already presented in the document “Valhalla Gas Exploration and Appraisal Program Section 38 Referral – Supporting Information Document” (BNR_ENV_RE_002), Section 6.3. Provide advice in regard to the adequacy of the estimates (including calculation methodology) and suggest any required updates to the estimates.
- Undertake a benchmarking exercise to compare GHG emission estimates against other HFS exploration projects.
- Conduct an Emissions Reduction Assessment with the intention of identifying options that the Company could implement to mitigate GHG Emissions to ALARP.

Further to the above the study will address EPA’s Environmental Scoping Document requirements,

Item No.	EPA ESD Requirement
74	Provide credible estimates of scope 1, scope 2 and scope 3 greenhouse gas emissions (annual and total) in tonnes of carbon dioxide equivalent (CO2-e) over the life of the proposal. Detail methods used to estimate emissions.
75	Provide a breakdown of estimated scope 1 and scope 2 greenhouse gas emissions in tonnes of CO2-e by all sources. Consider all proposed activities in determining the sources of emissions (e.g. clearing of land, site preparations, drilling operations,

	hydraulic fracture stimulation operations including flaring, potential leakage etc).
76	Provide calculations and calculation methodology for determining estimated emissions of CO2-e for all sources.
77	Benchmark the proposal's emissions against other hydraulic fracture stimulation exploration projects. Information which supports that the identified projects are comparable to the proposal should be included.
78	Provide a greenhouse gas management plan, in accordance with EPA guidance, which demonstrates the proposal's trajectory towards net zero emissions by 2050. The plan should include at a minimum: a) information required by 74 to 77 above. b) a graph and table showing regular targets reflecting an incremental reduction in emissions towards net zero emissions by 2050. Where the proposed emissions reduction targets do not demonstrate a trajectory towards net zero by 2050, articulate clearly a compelling reason why it is not possible to achieve this. c) mitigation (avoidance, reduction, offset) measures to be implemented with associated timeframes and evidence to demonstrate that the interim and long-term targets will be met. Where it is proposed that, following implementation of the avoidance and reduction measures, authorised offsets will be applied to meet the targets, evidence which supports that the mitigation measures are capable of achieving the stated targets is not required. d) Analysis of other potential abatement measures (e.g. renewables) relevant to the proposal that are not proposed to be implemented which provides the rationale to support that these measures are unable to be implemented. e) reporting requirements for publicly and periodically reporting against the stated targets.

1.2 Project Location

Access to the Proposal area is via the Great Northern Highway and Calwynyardah-Noonkanbah Road from the township of Fitzroy Crossing. A map of the Proposal area is provided in Figure 1-1.

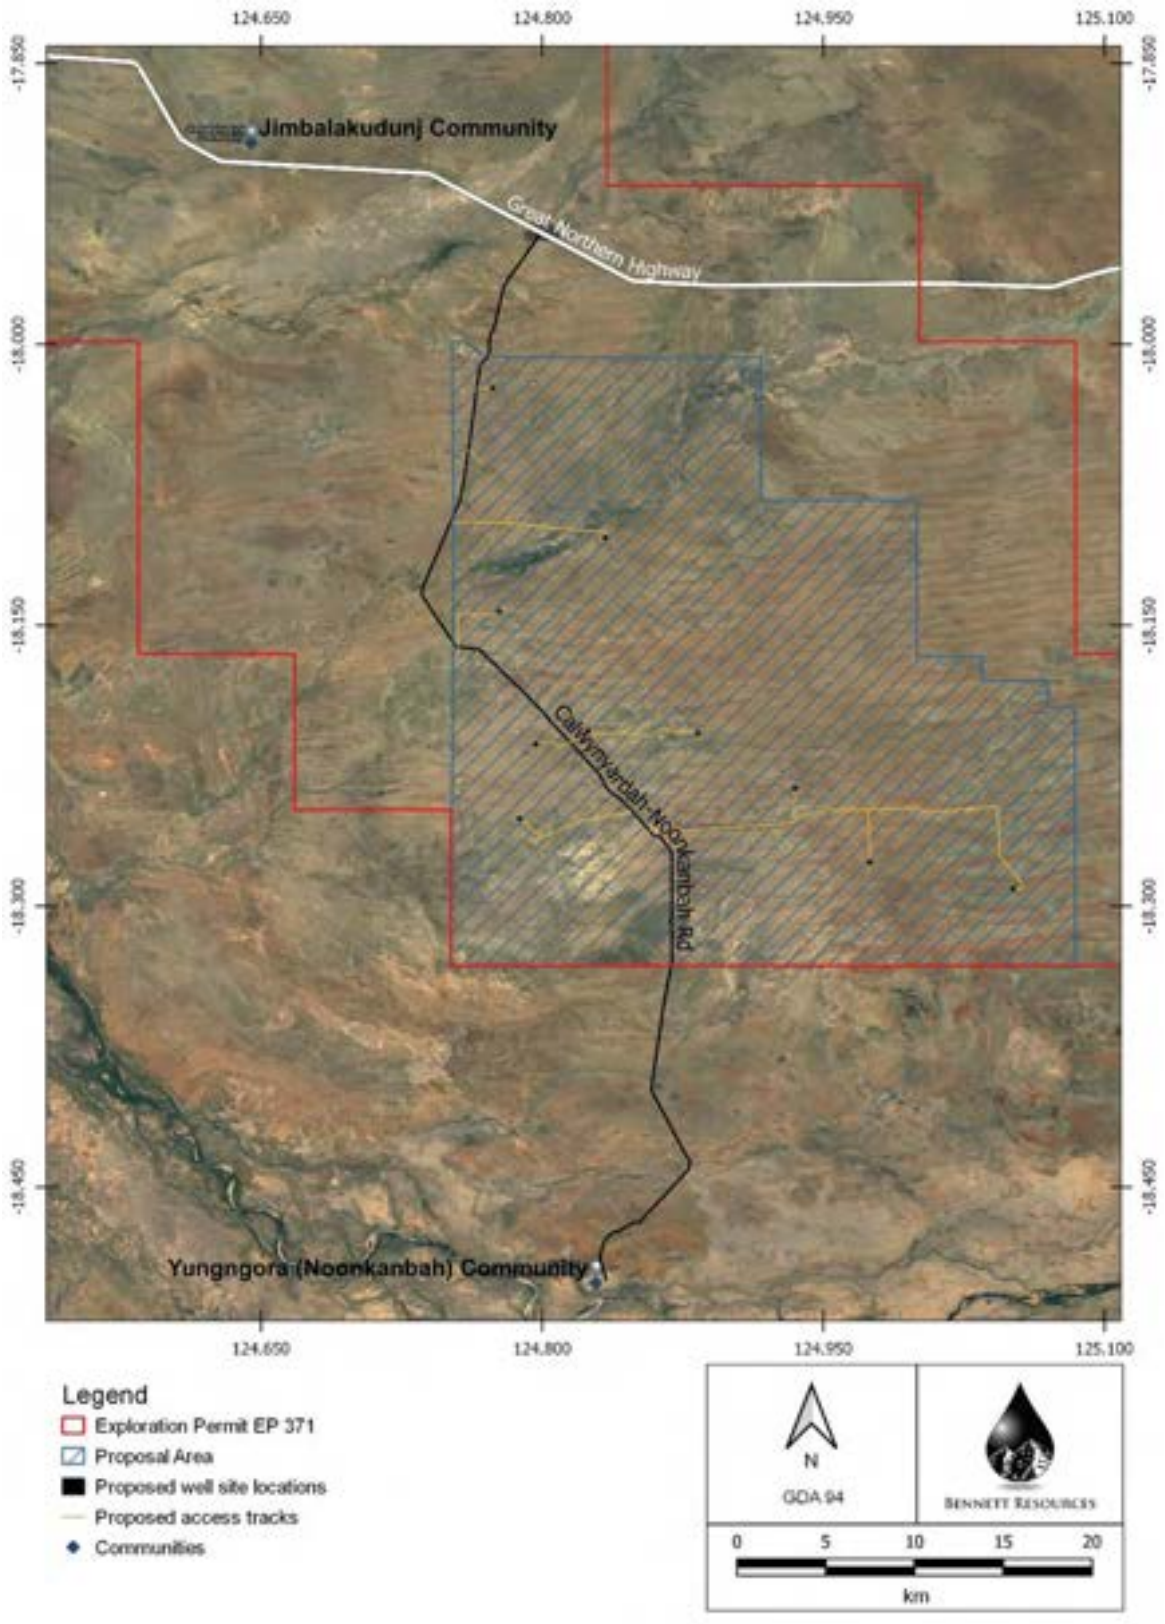

Figure 1-1: Valhalla Project Location

1.3 EPA Technical Guidance on GHG Mitigation

The WA EPA have provided a technical guidance for GHG emissions which is periodically updated from time to time for new or expanding operations with a GHG mitigation hierarchy of *avoid, reduce and offset*[2]. The Australian Government's principal mitigation initiative is currently the Emissions Reduction Fund (ERF) and the associated safeguard mechanism. The safeguard mechanism applies to facilities with direct emissions (scope 1) in excess of 100,000 tonnes CO2e per annum and requires liable entities to keep emissions at or below a predetermined (historical or calculated) emissions baseline. The EPA's objective is to ensure that the mitigation hierarchy is applied such that greenhouse gas emissions from proposals are avoided or reduced, and residual emissions offset, in the planning, design and operational stages. The Valhalla Gas Exploration and Appraisal Drilling Program will abide by the EPA guidelines to reduce GHG emissions according to the mitigation hierarchy during the project lifecycle.

1.4 Project Assumptions

The following GHG Emissions estimates in Table 1-1 was provided by BNR as part of the Valhalla E & A Program EPA referral submission. As noted in the table significant part of the emissions are associated with the flaring of the well test gas during the appraisal period.

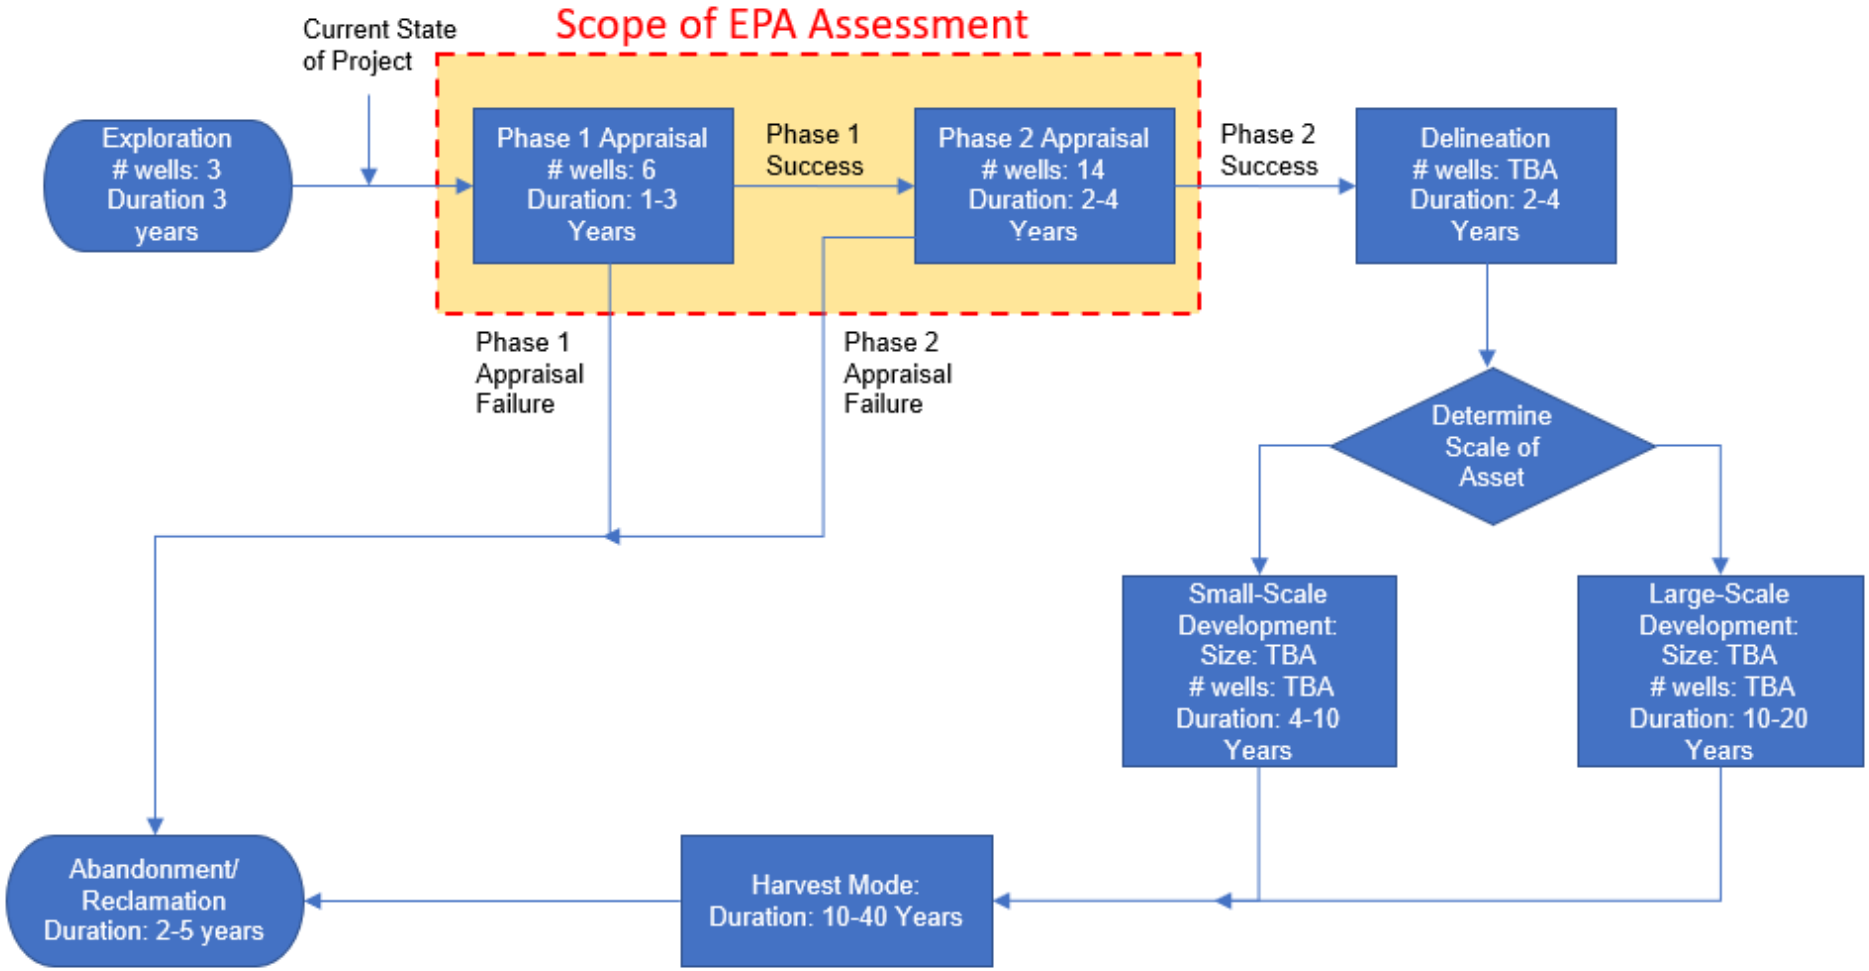
Table 6-9: Scope 1 GHG calculations per well

Activities	Emission source	Volume estimates (per well)		Total Scope 1 emissions per well (t CO_2-e)
Site preparation operations	Combustion emissions from diesel	20 m³		54
Drilling operations	Combustion emissions from diesel during mobilisation	10 m³		27
	Combustion emissions from diesel during Drilling operations	379 m³		1,023
HFS operations	Combustion emissions from diesel during mobilisation	20 m³		54
	Combustion emissions from diesel during HFS operations	300 m³		809
	CH_4 emissions during well testing	Gas Flow rate	Period of Flaring	<15,000
		~2.5 MMCFGPD	~90 days	
Site reinstatement	Combustion emissions from diesel	20 m³		54
			Total	17,021 t CO_2-e

Table 1-1: Current EPA Referral Submission for Valhalla E & A Program

During the period of GHG emissions evaluation, BNR advised the following key changes, which formed the basis of this study.

(1) A Well test gas flow Rate 5.9 mmscf/d will be required to evaluate the 6 Wells from Phase I.
(2) A Well test gas flow Rate 10.7 mmscf/d will be required to evaluate the 14 Wells from Phase II.
(3) A condensate to gas ratio (CGR) of 20 bbl/mmscf was assumed for the Valhalla reservoirs.
(4) A minimum test period of 60 days and maximum test period of 90 days is required per well.
(5) The following Road Map was provided for Valhalla Gas development:



Current State of Project
Scope of EPA Assessment
Exploration # wells: 3 Duration 3 years
Phase 1 Appraisal # wells: 6 Duration: 1-3 Years
Phase 1 Success
Phase 2 Appraisal # wells: 14 Duration: 2-4 Years
Phase 2 Success
Delineation # wells: TBA Duration: 2-4 Years
Phase 1 Appraisal Failure
Phase 2 Appraisal Failure
Determine Scale of Asset
Small-Scale Development: Size: TBA # wells: TBA Duration: 4-10 Years
Large-Scale Development: Size: TBA # wells: TBA Duration: 10-20 Years
Abandonment/ Reclamation Duration: 2-5 years
Harvest Mode: Duration: 10-40 Years

2 Review of GHG Emission Estimates

Based on the proposed activities associated with the Valhalla gas exploration and appraisal drilling program greenhouse gas emissions were estimated based on four activities as listed below,

(1) Land Clearing.
(2) Diesel Fuel Emissions.
(3) Fugitive Emissions.
(4) Well Testing Flaring.

These activities are directly associated with the operation of the proponent and are deemed as Scope 1 emissions. Indirect emissions associated with the Valhalla Exploration and Appraisal Drilling/HFS Operations Program is considered as Scope 2 emissions, such activities may include importation of power or other offsite energy supply activities related to the project. Scope 3 emissions are associated with all other indirect emission such as export of products from the project. The Valhalla Gas E & A program, at present, does not have the necessary infrastructure nor a market to export the gas or condensate from the project and intends to flare these hydrocarbons on site. Therefore, as a base case, no Scope 3 emissions are expected from the project. At present BNR is evaluating the possibility of selling the condensate after completing the initial appraisal wells and establishing a better understanding of the condensate volumes. Therefore, for completeness of this report Scope 3 emissions from condensate sale are also provided.

2.1 Land Clearing

The estimated land cleared for the 10 well sites (with 2 wells per site), access tracks and camp sites are tabulated below.

Land area	ha
Well Sites	40.1
Access Tracks	59.1
Camp Sites	2.8
Total	102

Table 2-1: Valhalla Exploration and Appraisal Drilling Program land clearing estimate

Forests, bushlands, grasslands and other vegetation, known as carbon sinks, remove carbon dioxide from the atmosphere. When such carbon sinks are cleared for industrial activity the associated loss of carbon sinks are counted as part of the greenhouse gas emissions estimate of the project. The Full Carbon Accounting Model (FullCAM) is a calculation tool for modelling Australia's GHG emissions from the land sector[3]. FullCAM is used in Australian National Greenhouse Gas Accounts for the land use change and forestry sectors. The FullCAM model estimates carbon stock change in ecosystems by considering above and below ground biomass, standing and decomposing debris and soil carbon resulting from land use activities. The latest version of the FullCAM model published in September 2020 was used for this estimate. Based on the spatial data input for the site location (Lat -18^{o} N, Long 124^{o} E), the following carbon mass estimate for calculated from the FullCAM model.

Component	(tC/ha)
Carbon mass of trees	16.4
Carbon mass of debris	13.9
Carbon mass of soil	25.9
Total Carbon mass on-site	56.3

Table 2-2: Site Carbon Mass Estimate

Based on the total land area cleared the total carbon emissions associated with land clearing is 5744 tCO2e and the average per well carbon emissions for the 20 well program is estimated as 287 tCO2e/well.

2.2 Diesel Fuel Emissions

The exploration and appraisal drilling program will involve several activities such as, site preparation, mobilisation of the drilling rig(s), drilling and completion of the exploration wells, mobilisation of the hydraulic fracturing rigs, hydraulic fracturing operations, testing of the wells, camp setup and operations of the camp during the drilling programs, transport of the workforce to and from site, and after the drilling activities are complete the reinstatement of the site. These activities are expected to be powered using diesel fuel for vehicle and in diesel engines. The following table provides an estimate of diesel fuel usage for these activities,

Per Well Data	Volume, KL
Site Preparation	20
Drilling Operations	316
HFS Operations	510
Site Reinstatement	20
Transport	344
Camp Site	8
Total	**1218**

Table 2-3: Diesel Fuel Usage per Well

The emissions from diesel fuel usage is estimated from National Greenhouse and Emissions Reporting (Measurement) Determination (2008) as updated in July 2020 and made under subsection 10(3) of the National Greenhouse and Energy Reporting Act 2007 [4]. Section 2.41 Method 1 of the NGER along with Fuel combustion emissions factors in Schedule 1 Part 3 for diesel fuel energy content factor and GHG emission factors as shown below,

Fuel	Energy Content	Emissions Factors (kgCO2e/GJ)		
	(GJ/ KLit)	CO2	CH4	N2O
Diesel	38.6	69.9	0.1	0.2

Table 2-4: NGER Emission Factors for Diesel Emissions

Based on the above emission factors average carbon emissions from diesel fuel usage per well was estimated as 3,300 tCO2e/Well.

2.3 Fugitive Emissions

Fugitive emissions include gas lost directly to atmosphere through uncontrolled sources during the drilling and HFS operations. The American Petroleum Institute produced a Compendium of greenhouse gas emission methodologies for the oil and natural gas industry[5]. Several methodologies used here are based on US EPA GHG estimation tables and has been also used by proponents who have filed their application for HFS projects in the Northern Territory under their new Code of Practice. The following sources were considered the main fugitive emissions sources as part of the greenhouse gas management program,

(i) Well completions: Completing new gas wells involves producing the fluids at a high rate to lift the excess sand to the surface and clear the well bore and formation to increase gas flow. Typically, the gas/liquid separator installed for normal well flow is not designed

for these high liquid flow rates and three-phase (gas, liquid, and sand) flow. Therefore, a common practice for this initial well completion step has been to produce the well to a pit or tanks where water, hydrocarbon liquids, and sand are captured, and slugs of gas vented to the atmosphere or flared. Completions can take anywhere from several hours to several weeks, during which time a substantial amount of gas may be released to the atmosphere or flared. Based on the following table from API compendium 25.9 tonnes/completion day of fugitive emissions was assumed.

Table 5-23. Production Segment CH_4 Emission Factors for Maintenance and Turnaround Activities

Source	CH_4 Emission Factor [a], Original Units	CH_4 Emission Factor [b], Converted to Tonnes Basis	CH_4 Content Basis of Factor [c]	Uncertainty [d] (±%)
Vessel blowdowns	78 scfy/vessel	0.0015 tonnes/vessel-yr	78.8 mole %	326
Compressor starts [e]	8,443 scfy/compressor	0.1620 tonnes/ compressor-yr	78.8 mole %	190
Compressor blowdowns	3,774 scfy/compressor	0.07239 tonnes/ compressor-yr	78.8 mole %	179
Gas well workovers [f] (tubing maintenance)	2,454 scf/workover	0.04707 tonnes/workover	Not given	924
Oil well workovers [f] (tubing maintenance)	96 scf/workover	0.0018 tonnes/workover	Not given	Not available
Gathering gas pipeline blowdowns	309 scfy/mile	0.00593 tonnes/mile-yr 0.00368 tonne/km-yr	78.8 mole %	39.5
Onshore gas well completion [g]	$1,712\times10^3$ scf/ completion-day	25.9 tonne/completion-day	78.8 mole %	Not available
Offshore gas well completion [g]	$\sim8,700\times10^3$ scf/ completion-day	131.5 tonne/completion-day	78.8 mole %	Not available
Oil pump stations (maintenance) [h]	1.56 lb/yr-station	7.076E-04 tonnes/station-yr	Not given	Not available

[b] CH_4 emission factors converted from scf or m^3 are based on 60°F and 14.7 psia. The CH_4 emission factors can be adjusted based on the relative concentrations of CH_4 and CO_2 to estimate CO_2 emissions.

[c] Shires, T.M., and M.R. Harrison. *Methane Emissions from the Natural Gas Industry, Volume 6: Vented and Combustion Source Summary, Final Report*, GRI-94/0257.23 and EPA-600/R-96-080f, Gas Research Institute and U.S. Environmental Protection Agency, June 1996.

[d] Uncertainty based on a 95% confidence interval.

[e] An EPA Gas STAR paper on engine starts reports that typical production compressor engine start-ups vent 1,000 to 5,000 scf of gas with each start-up attempt (EPA Gas STAR, PRO Fact Sheet No. 101, September 2004). This equates to 0.015 to 0.076 tonnes CH_4/start-up attempt assuming 78.8 mole % CH_4 in the gas.

[f] Factor taken from: Tilkicioglu, B.H. *Annual Methane Emission Estimate of the Natural Gas Systems in the United States*, Phase II, Pipeline Systems Incorporated (PSI), September 1990. An EPA Gas STAR paper on installing plunger lift systems in gas wells presents a gas well workover emission factor of 2000 scf CH_4/workover, which equates to 0.0384 tonnes CH_4/workover (EPA Gas STAR, Lessons Learned - Installing Plunger Lift Systems in Gas Wells, October 2003). Gas STAR also reports that the number of gas well workovers conducted in a year typically ranges from 1 to 15.

[g] EIA, U.S. Natural Gas Markets: Mid-Term Prospects for Natural Gas Supply, December 2001. Cites data for initial rates of production for completions in 2000. Offshore factor interpolated from chart "Initial Flow Rates of New Natural Gas Well Completions, 1985-2000." The total gas basis was converted to a CH_4 basis assuming 78.8 mole % CH_4 in production using the GRI/EPA average CH_4 composition for production operations.

Table 2-4: Fugitive Emissions from Onshore Wells (API –Compendium of greenhouse gas emission methodologies for the oil and natural gas industry Table 5-23)

Based on discussions with BNR, it was confirmed that RECs (Reduced Emissions Completions) will be used and no cold venting will occur during well completions and negligible amount of fugitive emissions are expected from well completions activities.

(ii) Drill cuttings: Drill cutting generated during the drilling into hydrocarbon formation contain methane and other hydrocarbons. These cutting produce gaseous emissions from thermal desorption. The quantity of gas absorbed in the drill cuttings are estimated based on cutting volume, porosity and gas saturation.
In order to estimate the fugitive gas emission from drill cutting BNR indicated a total volume of 156m3 was used with a porosity of 8% and a gas saturation of 46.5%. The methane quantity associated with the drill cuttings was estimated as 1.18 tonnes per well and the associated GHG emission was estimated as 29.6 tCO2e, assuming a 25tCO2e/tCH4 as per NGERs.

(iii) Wastewater Storage: Emissions from wastewater recovered from flowback and held in storage tanks can be estimated using Compendium of greenhouse gas emission methodologies for the oil and natural gas industry Table 5-10. An emissions factor of 0.39896 tonnes of methane/ML of produced water was used.
In order to estimate the fugitive emissions from wastewater, BNR indicated a 2 ML per well would be recovered. Therefore, methane emissions were estimated at 0.78 tonnes per well and the associated GHG emissions was estimated as 19.5 tonnes CO2e, assuming 25 tCO2/tCH4 as per NGERs.

Table 5-10. Produced Salt Water Tank Methane Flashing Emission Factors

Separator Pressure (psi)	Produced Water Salt Content	GRI/EPA Emission Rate [a], Original Units (10^6 lb CH_4/yr)	Water Tank Emission Factor

2.4 Well Testing Flare

As part of the drilling program the exploration and appraisals wells are flow tested over a minimum of 60 days and a maximum period of 90 days and at an average flow rate of 5.9 mmsc/d for the 6 wells in Phase 1 and 10.7 mmscf/d for the 14 wells in Phase 2 to evaluate the commercial viability of the Valhalla

shale gas formation. The produced hydrocarbons from the well tests are directed towards a flare with a minimum destruction efficiency of 98% to ensure maximum practical combustion of the hydrocarbons. Methane has a hydrocarbon potential 25-times more than CO2 and hence gas is flared during all well tests to reduce greenhouse gas emissions. The expected condensate to gas ratio (CGR) in the Valhalla formation is around 20 bbl/mmscf, hence a condensate flow rate of 118 bbl/day is expected during Phase I of the well testing program and 214 bbl/d during Phase II of the well testing program. The condensate is assumed to be flared at site as a base case, while BNR is investigating the possibility of trucking the condensate out of site for sale.

The greenhouse gas associated with the flaring of the gas and condensate is estimated based on National Greenhouse and Emissions Reporting (Measurement) Determination (2008) as updated in July 2020 and made under subsection 10(3) of the National Greenhouse and Energy Reporting Act 2007 [4]. Section 3.44 Method 1 of the NGER along with Fuel combustion emissions factors as shown below,

Fuel	**Emissions Factors (tCO2/t Gas flared)**		
	CO2	**CH4**	**N2O**
Gas Flared	2.8	0.933	0.026
Condensate Flared	3.2	0.009	0.060

Table 2-6: NGER Emission Factors for Gas and Condensate Flared

The amount of gas flared was estimated based on an expected gas composition of CH4 87 mol%, C2 5.5 mol%, C3 2.7 mol% and inerts 4.8 mol% and the average density of gas of 0.79 kg/m3 at standard conditions. The average density of the condensate was assumed to be 750 kg/m3.

Based on the above emission factors and the estimated weight of gas and condensate flared per day of well testing along with GHG emissions associated with the gas and condensate flaring per day per well is shown in Table 2-7 below.

Emissions per Well per day	**Phase I**	**Phase II**
Gas Flared (tonnes/d)	131.9	239.2
Condensate Flared (tonnes/d)	14.1	25.5
GHG Emissions from Gas flared (tCO2e/d)	496	899
GHG Emissions from Condensate flared (tCO2e/d)	46	83

Table 2-7: Quantity of Gas and Condensate Flared and associated GHG Emissions.

A minimum and maximum emissions per well is based on the minimum well test period of 60 days and a maximum well test period of 90 days.

2.5 Summary of Scope 1 GHG Emissions

Based on the above GHG emissions calculations, results are presented for a single well and for the total number of wells over the minimum 60 day and maximum 90-day test period for Phase I and Phase II of the Valhalla Exploration and Appraisal program in Table 2-7 below,

CO2 Emissions per E&A Well	Input Parameter	Phase I - 6 Wells (t CO2e)		Phase II - 14 Wells (t CO2e)		Calculation Reference
		60 days Well Test	90 days Well Test	60 days Well Test	90 days Well Test

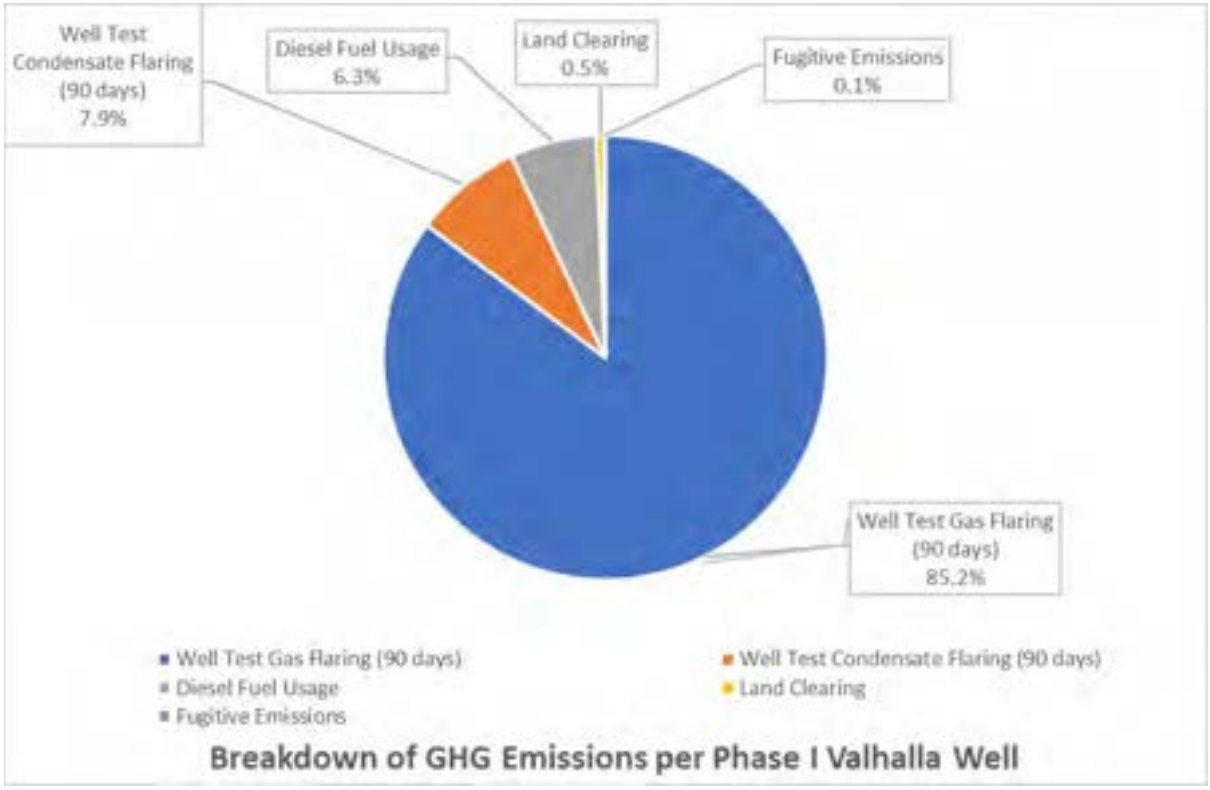
Table 2-7: Valhalla E & A Program GHG Emissions Summary

The results can be represented in a pie-chart for comparison of various sources of GHG emissions per well as shown in Figure 2-1 below.



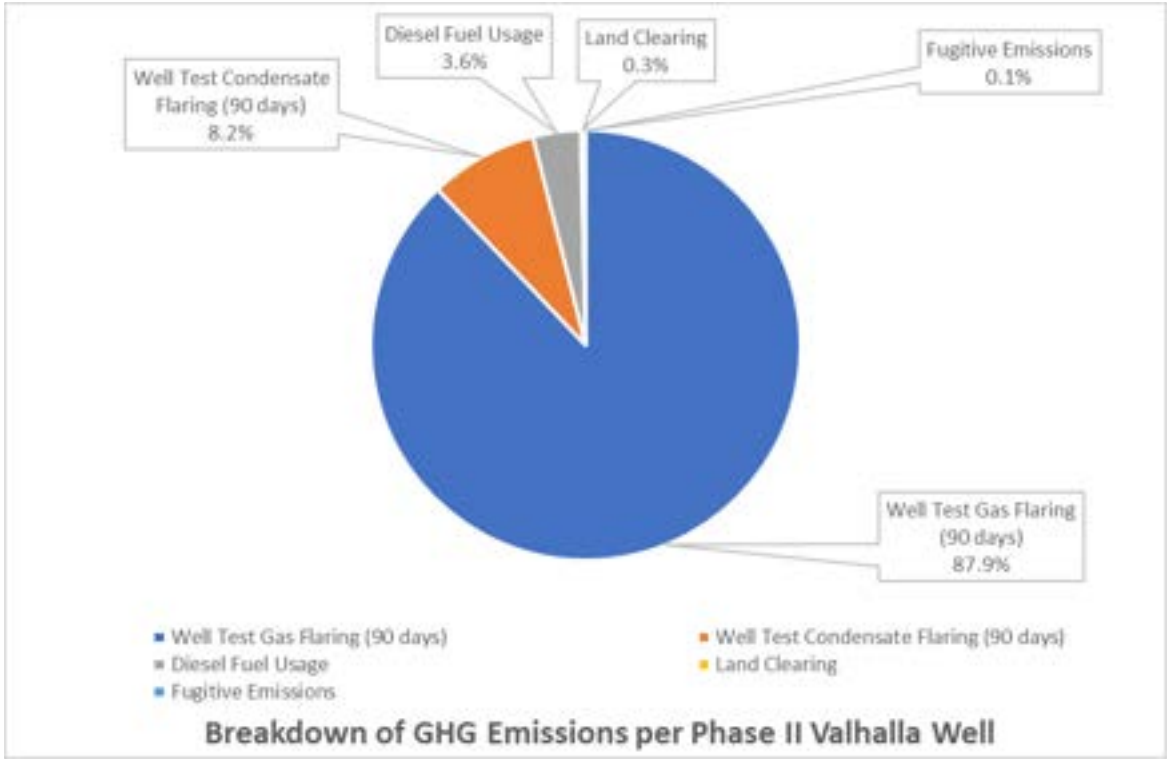


Figure 2-1: Breakdown of GHG Emissions per for 90-day Well Test for Phase I and Phase II of the Project

2.6 Project Overall Direct GHG Emissions (Scope 1)

The overall timeline of the Valhalla E & A Program could be between 3-7 years, where Phase I could take from 1-3 years and Phase II could take from 2-4 years depending on several technical and commercial factors. Therefore, two timelines and the associated GHG emissions for each of these timelines are provided below. Timeline #1 is an optimistic scenario where Phase I will be competed in Year 1 and Phase II will be completed in Year 2 and Year 3 of the Program. Timeline #2 is a resource constraint scenario where Phase I will take 3 years and Phase 4 will take another 4 years of the Program. Figure 2-2 provides annual GHG emissions for Timeline #1 and Figure 2-3 provides annual GHG emission for Timeline #2 for the Valhalla E & A Program.

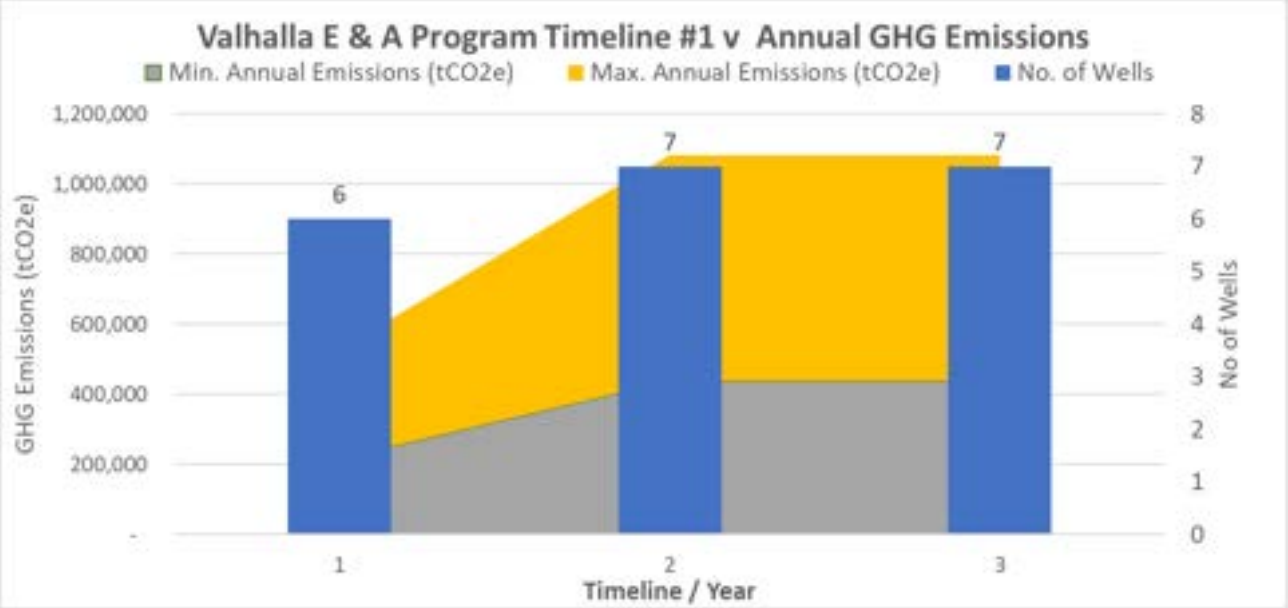

Figure 2-2: Timeline #1 for Overall Scope 1 GHG Emissions of the Valhalla E&P Program

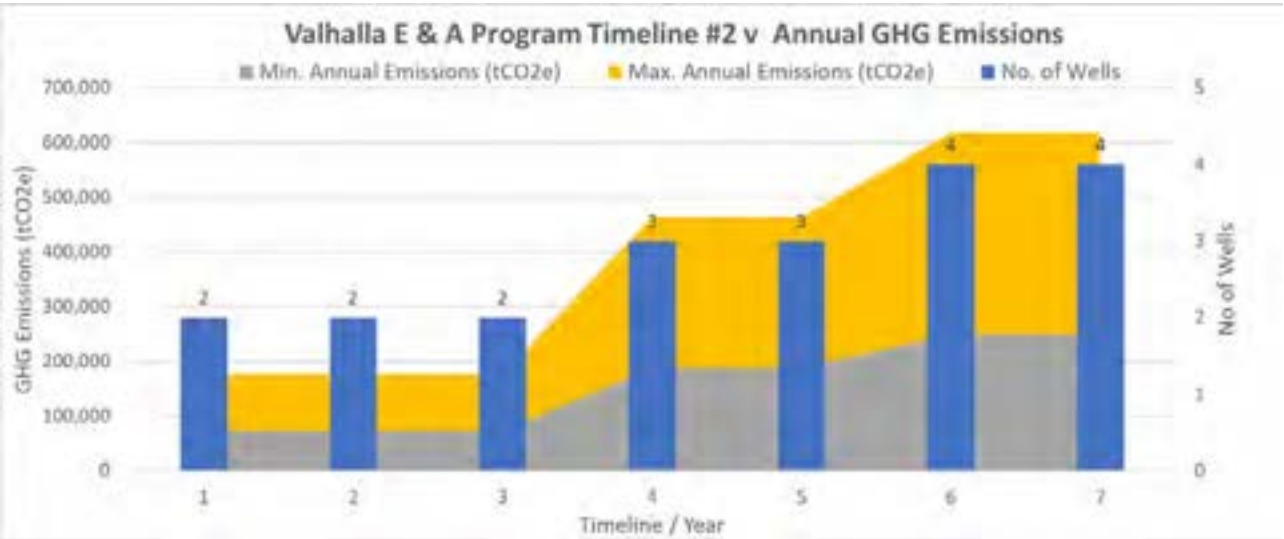

Figure 2-3: Timeline #2 for Overall Scope 1 GHG Emissions of the Valhalla E&P Program

2.7 Project Scope 2 Emissions

Indirect emissions from the generation of purchased energy consumed by a company is classified as Scope 2 emissions. The Valhalla Gas Exploration and Appraisal Program is intended to evaluate the quality of the gas field with drilling of exploration and appraisal wells, hydraulic fracture stimulation and flow tests. The E & P program does not intend to import power from third parties hence no Scope 2 emissions are envisaged as part of the project.

2.8 Project Scope 3 Emissions

All other indirect emissions not included in Scope 2 emissions that occur during the 7-years of the project is classified as Scope 3 emissions. The possibility of selling the condensate collected during the well test program to third parties rather than being flared at site is currently being evaluated as a recommended greenhouse gas mitigation measure. The emissions associated with the transportation and utlisation of condensate as a fuel is considered Scope 3 emissions for the project. For the purpose of this estimate the condensate produced from the well tests (minimum 60 day test period, maximum 90 day test period) was assumed to be collected and shipped from site. The condensate collected over the 7-years of the E & A program was assumed to be shipped from Wyndham to Singapore where it was assumed to be processed and consumed. A transportation emission factor of 130gCO2e/tonne/km of condensate[6]. Fuel combustion emissions from the condensate was estimated based on NGERs Method 2.41 – Schedule 1 Table Part 3 assuming the properties of Kerosene [4] along with a 10% factor for emission associated with the refining and selling of the condensate.

Scope 3 Emissions	**Min**	**Max**
Condensate Volume (bbls)	222,240	333,360
Condensate Transport Emissions (tCO2e)	13,952	20,928
Condensate Consumption Emissions (tCO2e)	91,571	137,356
Total Scope 3 Emissions (tCO2e)	105,523	158,284

Table 2-8: Scope 3 Emissions from Valhalla E & A Program

There are also other Scope 3 indirect emissions associated with the project including employee commuting, business travel and purchase of goods and services, which are considered minimal for the purpose of this estimation.

2.9 Breakdown of GHG Emissions

The results for the GHG emissions for the Valhalla E & A Program can be summarized as below considering both the condensate flaring and condensate sale option.

GHG Emissions (tCO2e)	**Condensate Flared**		**Condensate Sold**	
	Min	**Max**	**Min**	**Max**
Scope 1	1,082,222	1,592,556	995,593	1,462,614
Scope 2	-	-	-	-
Scope 3	-	-	105,523	158,284
Total Emissions(tCO2e)	**1,082,222**	**1,592,556**	**1,101,116**	**1,620,898**

Table 2-9: Overall Project Emissions from Valhalla E & A Program

It should be noted that the overall emissions with the condensate sale options is higher due to transportation and processing emission of the condensate. But the condensate would be utilized for an energy application rather than flared at site as a waste product displacing emissions from another source.

3 GHG Emissions Benchmarking

As part of the GHG emissions benchmarking exercise, carbon emissions from the Valhalla Exploration and Appraisal Program activities were compared with previous Buru Energy HFS exploration and appraisal drilling activity in the Canning Basin along with the recently approved drilling and HFS projects in the McArthur and Beetaloo sub-basins in the Northern Territory. A brief description of the other projects used for the benchmarking exercise is provided below with focus on critical emission sources such as the gas and condensate flare rates.

3.1 Buru – Canning Basin - TGS14 Project

Buru Energy carried out a HFS program in four wells Yullaroo-3, Yullaroo-4, Valhalla North-1 and Asgard-1 Wells in 2014, these wells were constructed in 2012/13 and the integrity of the wells were assessed prior to the HFS program in 2014 [7]. The activities for Tight Gas Pilot Exploration Program (TGS14) consist of hydraulic fracturing to stimulate the vertical component of the tight gas reservoir, the well flowed back and the resultant flow of gas and liquid hydrocarbons from the well was then measured and analysed over a period of time. The maximum well test flow rate of 2 mmscf/d was used during the tests where gas was flared over the 3-month testing period. Condensate removed from the well test separator was stored on site and trucked out for sales.

3.2 Origin - Betaloo Basin – Valkerri Project

Origin filed an Environmental Management Plan (EMP) for drilling, HFS and well testing of Velkerri 76 S2 exploration well on EP 76 in the Betaloo Basin in the Northern Territory in accordance the NT Petroleum (Environment) Regulations 2016, Code of Practice: Onshore Petroleum Activities in the Northern Territory [8]. The exploration well will consist of 2000-3000 m vertical component and horizontal section of 3000 m. The well testing program is planned for 3-12 months. A well testing rate of 2.5 TJ/d is envisaged with 37.5 bbl/d of condensate produced. The condensate will be flared along with the well test gas in a vertical flare.

3.3 Origin - Betaloo Basin – Kyalla Project

Origin has also filed EMP for a multi-well drilling, stimulation and well testing program in Kyalla 117 N2 [9]. Origin obtained approval for the Kyalla 117 N2-1H well in 2019 and have applied for Kyalla 117 N2-2H and Kyalla N2-3H drilling, HFS and well testing to utilise multi-well pads to improve efficiency and reduce environmental footprint in 2021. The program is intended to optimise multi-well pad layout of surface operations for potential future development scenario with the core objective of minimising the environmental footprint, including minimising land clearance, maximising water reuse and reducing greenhouse gas emissions. The exploration well will consist of 1500 m lateral length for 1H well and 2800 m lateral length for 2H and 3H wells. The well testing program is planned for 3-6 months. A well testing rate of 1.5 TJ/d is envisaged with 15 bbl/d of condensate produced. The condensate will be flared along with the well test gas in a vertical flare.

3.4 Santos – McArthur Basin EP161 Project

Santo has filed an EMP for a multi-well drilling, stimulation and well testing program with Tanumbirini 1, Tanumbirini 2H and Inacumba 1/1H wells in 2019[10]. The exploration well will consist of 2000 m lateral length for both wells. The well testing program is planned for 3-12 months. A well testing rate of 1.55 mmscf/d is planned with condensate produced will be trucked out of site and not flared.

3.5 Imperial – McArthur Basin – Carpinteria 1

Imperial filed an EMP with NT EPA for the drilling of the Carpentaria 1 well in EP 187 in the McArthur Basin for the vertical pilot well and with no HFS activities [11]. The drilling program will include inflow and production testing of the vertical zone where gas would be flared at 1.2 mmscf/d over a 90 day period.

3.6 Comparison of HFS Exploration and Appraisal Projects

A comparison table is provided summarizing project datal along with the Valhalla E & A Project.

Project	List of Wells	No of Wells	Lateral Drilling, m	HFS	Gas Flare Rate	Condensate Flare Rate	Test Period
Origin -Kyalla	Kyalla 117 N-1H Kyalla 117 N-2H Kyalla 117 N-3H	3	1500-1800	Y	1.5 TJ/d	15 bbl/d	3-12 months
Origin - Valkerri	Velkerri 76 S2	1	3000	Y	2.5 TJ/d	37.5 bbl/d	3-6 months
Santos - McArthur	Tanumbirini x 2 Inacumba x 1	3	2000	Y	1.55 mmscf/d	NA	3-12 months
Imperial - Carpenteria 1	Carpenteria 1	1	NA	N	1.2 mmscf/d	NA	3 months
Buru-TGS14	Yulleroo 5 Yulleroo 6 Valhalla North 1 Asgard 1	4	NA	Y	2 mmscf/d	NA	3 months
BNR -Valhalla	Phase I - Refer ERD	6	1500	Y	5.9 mmscf/d	118 bbl/d	2-3 months
	Phase II- Refer ERD	14	3000	Y	10.7 mmscf/d	214 bbl/d	2-3 months

Table 3-1: Exploration & Appraisal Project Comparison Summary

3.7 Benchmarking Exercise

All Exploration and Appraisal projects are different and have unique components, for the purpose of this benchmarking comparison, the exploration wells with horizontal drilling and HFS was compared with the Valhalla E & A Program, hence the BuruTGS14 and Imperial Carpinteria 1 programs were not used for the benchmarking exercise.

In order to benchmark projects for their GHG emissions, typically, GHG emissions intensity values are calculated on a 'tCO2e per tonne of product' basis for manufacturing projects or 'tCO2e per kWh' basis for power generation projects such that project emissions can be compared. GHG emission intensities from gas exploration projects cannot be compared on such a basis. Therefore, couple of methods were used to benchmark the Valhalla E & A program gas exploration project emissions along with the Origin and Santos exploration programs. GHG emissions intensities on a per Well per Test Day for the Valhalla wells along with other projects is shown in Figure 3-1. The results clearly indicate significantly more emission from the Valhalla well tests per day due to its higher well test flow rates per day. It should be noted that the Origin and Santos test programs are planned for a significantly longer period from up to 3-12 months compared to 2-3 months for Valhalla. Therefore, another comparison could be made based on the planned minimum and maximum total emission per well from these exploration and appraisal programs. Figure 3-2 provides planned total emission per well from these projects.

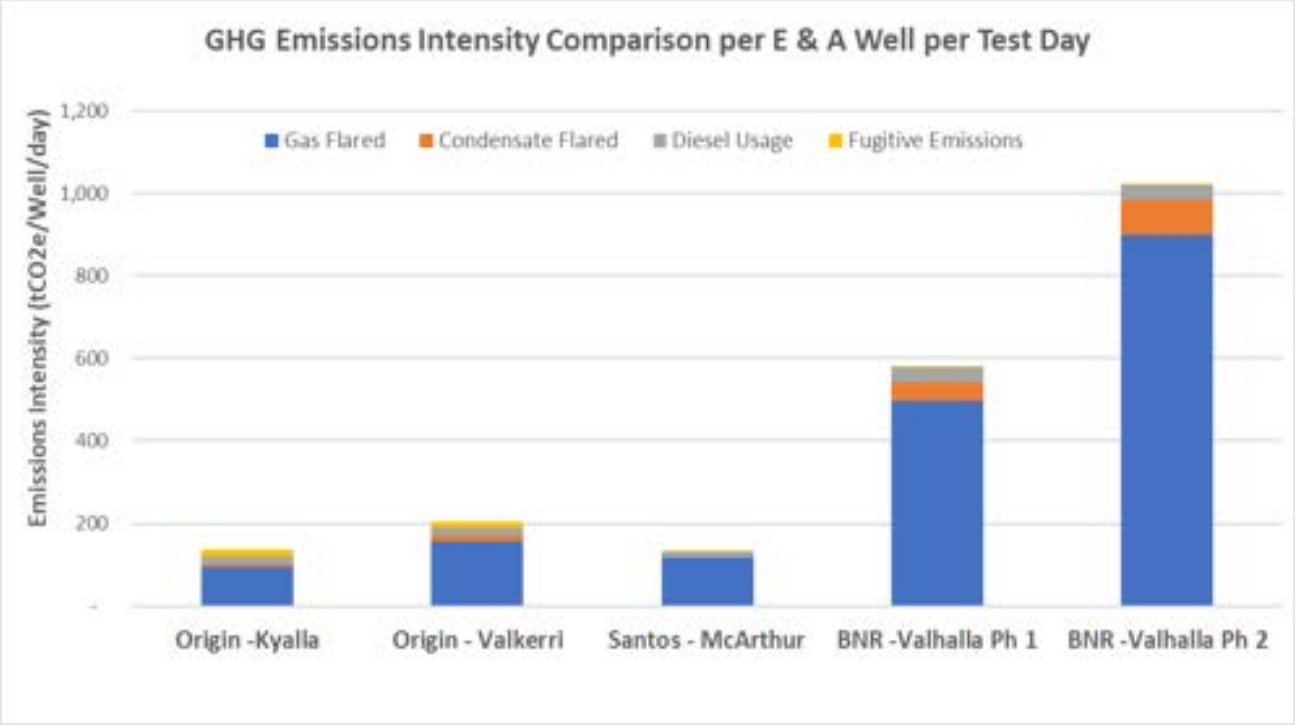

Figure 3-1: Benchmarking GHG Emission of the Valhalla E&P Program per Well per Test Day

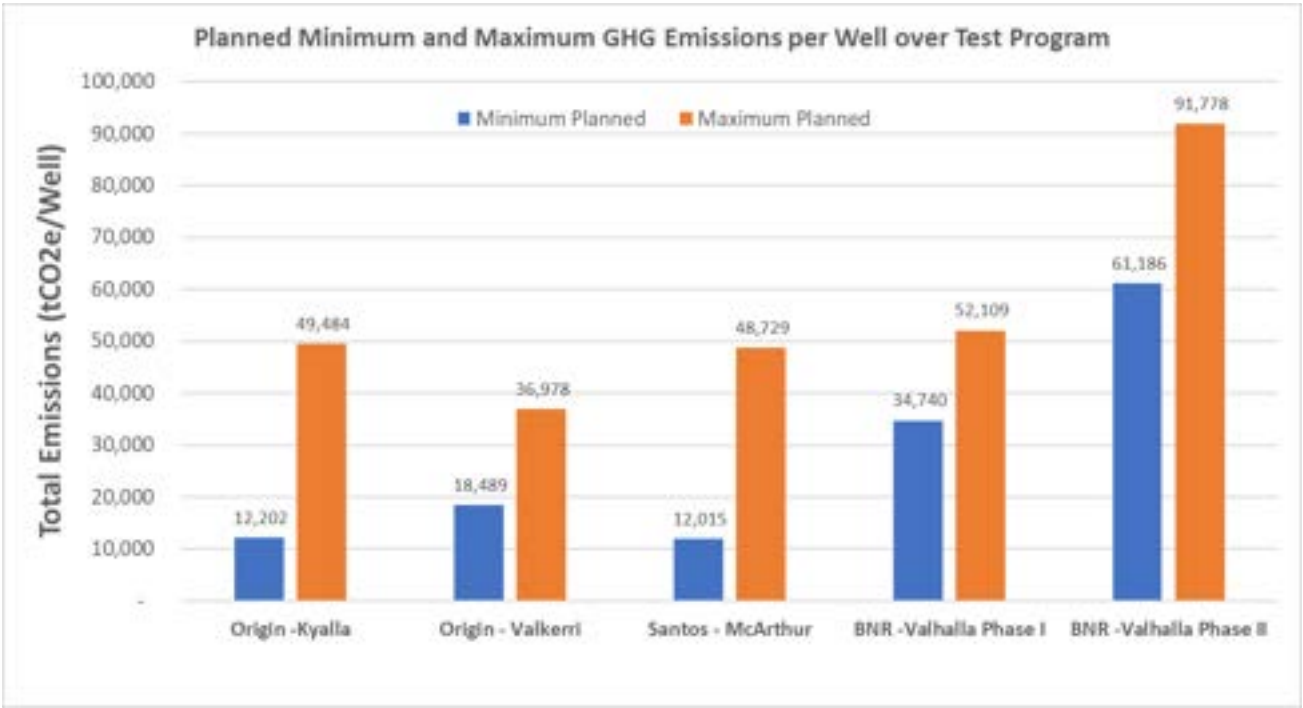

Figure 3-2: Benchmarking GHG Emission of the Valhalla E&P Program for planned toral emissions per Well

The results indicate the Valhalla Phase I emissions are compatible with the permitted/planned total emissions of other projects in the Beetaloo Basin in the NT. The Valhalla Phase II emissions are higher

than the other projects due to its higher flow test rates which is at the later part of the project. It should be also noted that Origin-Kyalla prgram is based on 3 wells, Origin-Valkerri program is based on 1 well and Santos-McArthur program is based on 2 wells while Valhalla Phase I is based on 6 wells and Valhalla Phase II is based on 14 wells. The Valhalla E & A program provides a complete scale of the development program for the Valhalla field while the other project proponents have only provided the very early part of their E & A program.

3.8 GHG Emissions comparison with State and National Emissions

The following table provides a comparison of the total Valhalla E & A program GHG emissions from the 20-well program over the proposed two timelines as a percentage of the state and national GHG emissions.

	mtCO2e	**% of State Emissions**	**% of National Emissions**
Annual WA State Emissions[1] (2019)	91.85		
Annual Australian National Emissions[2] (2019)	529.30		
Valhalla - Timeline #1 (3 Years)	1.59	0.58%	0.10%
Valhalla - Timeline #2 (7 Years)	1.59	0.25%	0.04%

[1] Based on 2019 WA GHG emissions. [2] Based on 2019 National GHG Emissions.

Table 3-2: GHG Emissions compared to State and National Emissions

The GHG emissions from the Valhalla E & A program contributes to a small fractional increase in the state GHG emissions and a much smaller fractional increase in the national GHG emissions.

4 GHG Emissions Reduction Assessment

This section outlines the measures incorporated into the Valhalla Exploration and Appraisal Program to reduce GHG emissions and reduce overall carbon footprint of the project. The following measures have been evaluated for the drilling and HFS operations as Reduced Emissions Completions (RECs), as recommended in the WA Scientific Inquiry into Hydraulic Fracking for the mitigation of greenhouse gas emissions.

4.1 Use of single pad for multiple horizontal drills.

Single well-pad vertical designs result in significantly less land clearing. The use of efficient multi-well pad horizontal shale development results 50%-60% reduction in land use as shown in Figure 4-1.

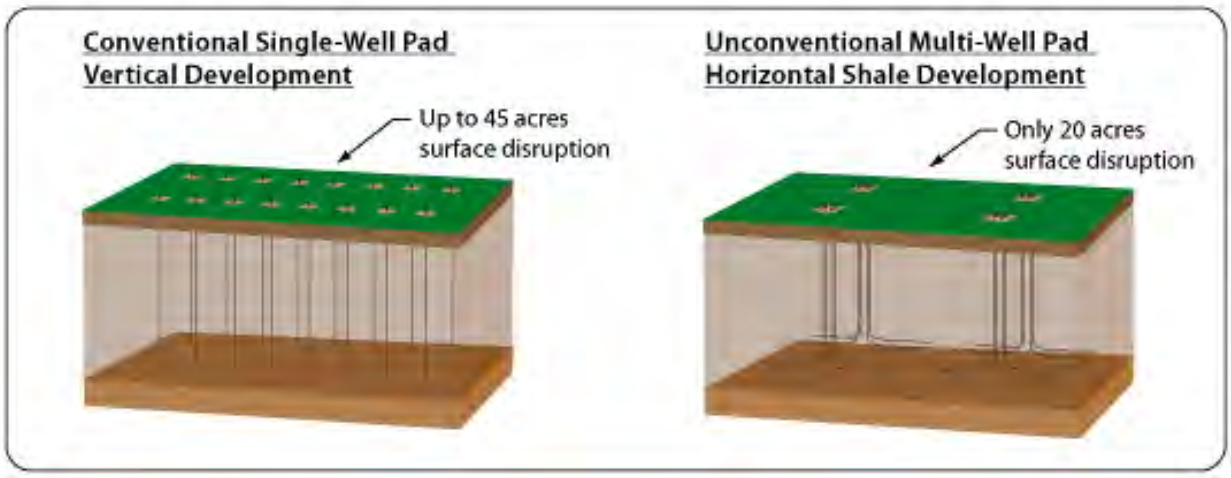

Figure 4-1: Single v Multi Well Pad designs

The Valhalla Exploration and Appraisal program utilizes 10 well pads for drilling 20 wells, implementing an efficient multi-well drilling technique to minimize land clearing. The minimization of land clearing reduces the impact associated with GHG emissions associated with the removal of vegetation. A total land cleared for the 20 well program is 102 ha of which 40 ha is associated with the well sites, therefore reducing overall land cleared by around 40%.

4.2 Use of latest (Tier 4 – US or Stage V -EU) diesel engines.

The diesel engines used for the drilling and HFS operations will employ the latest efficient units with highest emission standards. The Tier 4 diesel engines have 90% lower NOx and PM emission compared to Tier 3 engines and are fuel efficient resulting 15% GHG emissions reduction. In Europe, Stage V is the latest and the strictest tier of these regulations for emissions with regards to upstream oil and gas applications.

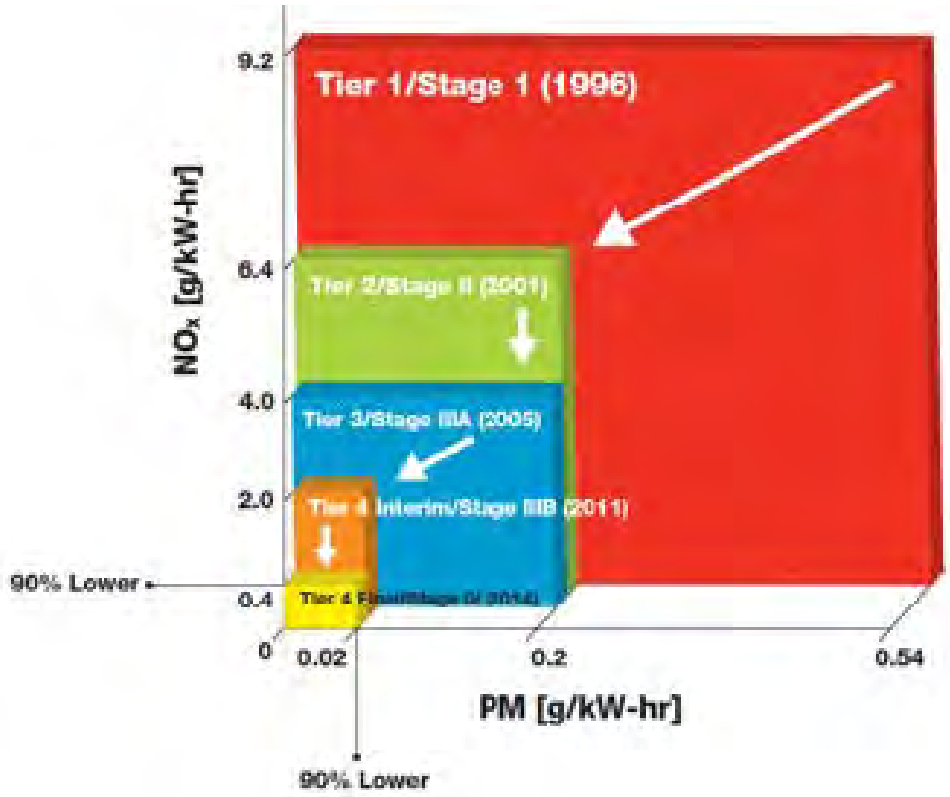

Figure 4-2: Tier 4 Diesel Engine Performance

4.3 Collection and sale of condensate.

As recommended by the WA Hydraulic Fracking Inquiry Report the well construction activities Reduced Emissions Completions (REC) should be employed where feasible so that gas and condensate is captured for sale or other use. The well test fluids during the exploration and appraisal program could be passed via a sand trap and 3-phase separator to remove water and condensate from the gas where the condensate could be stored and trucked out of site for sales to a refinery. BNR is currently evaluating options for the sale of condensate produced from the well tests via Wyndham Port to Singapore, where Buru Energy already exports its oil.

4.4 Flare Design

Gas venting is avoided during the well completions and well tests and only permitted for operational or safety reasons. Gas flaring is carried out in accordance with Code of Practice requirements and as per US EPA 40 CFR 63.11, with a flare tip combustion efficiency of 98%. Two separate vertical stacks, one for flowback high pressure gas and a second low pressure flare to manage tank vapors (off storage tanks) would be used to ensure all methane at site is flared. Both flare systems would utilize an auto-ignite system, gas assist, and a single pilot.

Figure 4-3: Multi-Stack Vertical Flare for low-pressure and high-pressure gas

4.5 Gas Capture

The Canning Basin does not have any gas infrastructure such that the flow test gas can be treated and sent to a gas pipeline for sale. Therefore, the only possibility would be to capture the gas as Compressed Natural Gas (CNG) or utilising Mini-LNG facilities as described below and supply it to energy users in the Kimberley.

4.5.1 Compressed Natural Gas

The well test gas would be required to be dehydrated and compressed to around 250 bar to be stored in high pressure storage bullets which can then be used in gas engines for power generation in Well Test sites instead of diesel. CNG can also be transported to power stations in Broome, Derby and other west Kimberley towns to replace LNG trucked from Karratha at present. CNG could also be used in duel-fuel engines for the drilling and HFS operations within the Valhalla E & A Program if equipment with suitable

engine specifications is available locally. At present the sale of gas as CNG is considered unviable due the associated cost of capture, treatment and transportation to markets located far from the Valhalla field.

Figure 4-4: CNG utilisation in duel-fuel engines (Source: GTUIT)

4.5.2 Micro LNG

A relocatable micro-LNG plant could also be used to capture the well head gas (as used in some US shale gas operations) if this equipment were available in the Australian market. The use of micro-LNG option would require the well head gas to be pretreated such that water, CO2 and freezable heavy hydrocarbons are removed from the gas to allow liquefaction of the gas. The LNG produced can then be stored in transportable ISO containers and shipped to markets.

Cryobox™ is a mini-LNG technology and other similar flare gas liquefaction technologies that provides relocatable pre-treatment units as used in US shale gas industry [12].

Figure 4-5: Well head gas capture via Mini-LNG (Source: CryoBox)

At present the sale of LNG to local power stations is considered unviable with existing gas offtake contracts in place with power plant operations and the inability for the project proponents to commit to a fixed volume based LNG supply contract from the gas exploration and appraisal program.

4.5.3 Renewables

The use of renewable energy such as solar PV for powering the drilling and HFS operations are impracticable as significant number of solar panels will be required to be placed over a large area. The solar PV power also need to be supported with large batteries that can store energy to be supplied during the nights. Therefore, resulting in significantly higher costs. Further, the rigs and HFS units need to be re-located to various sites during the drilling program which will make the use of renewable energy impracticable. A better alternative would be to use grid power if available, for the drilling operations, while the grid is supported by renewable power. The Canning Basin and Valhalla region does not have such a grid to support the project. However, solar powered lighting towers with batteries backup are planned to be used in the project as shown in Figure 4-5 along with and other solar power based instrumentation and monitoring systems.

Figure 4-5: GHG Mitigation Measures for the Projects

4.6 GHG Mitigation Summary

The 7-year 20 well Valhalla Gas Exploration & Appraisal program provides the complete scale of the planned drilling and HFS activities associated with the evaluation of the Valhalla formation. Significant part of the GHG emission of an exploration and appraisal drilling program is associated with the well test flow rates and the duration of the well tests. The overall GHG emission estimates are also dependent on the number of wells drilled in Phase I and Phase II of the program with potentially multiple drilling campaigns. The total number of wells drilled will highly depend on the success of each drilling campaign.

The maximum direct emission from the Valhalla E & A program was estimated as 1,597,856 mtCO2e over the 7 years. The following GHG mitigation measures in accordance with the EPA hierarchy of avoid, reduce, offset GHG emissions are discussed below.

4.6.1 GHG Emissions Avoided

By incorporating industry best practice design the following measures were utilized in the Valhalla E & A program to minimize GHG emissions,

(1) Multi-pad Well design: The Valhalla E & A program utlises 2 horizontal wells per well pad to minimize land clearing. The estimated GHG emission avoided is 2,300 tCO2e for the project.
(2) Dual-stack LP/HP Flare: Separate Low Pressure (LP) and High Pressure (HP) flares are used as part of the design to combust tank vapours and well test gas separately ensures any low pressure methane emissions on site is avoided. The estimated GHG emission avoided is 10,000 tCO2e.

4.6.2 GHG Emissions Reduction

The following GHG emission reduction measures are currently being assessed to further reduce project GHG emissions.

(1) Condensate Sale: The sale of condensate produced during the well tests currently being actively pursued by BNR as discussed previously. This would avoid up to 129,943 tCO2e of GHG emissions on site during the project period.
(2) Dual-Fuel Engines: The capture, dehydration, compression and storage of well test gas would allow it to be used in dual-fuel engines reducing the use of diesel and the associated emissions during the drilling and HFS operations. The estimated GHG reduction is around 33,500 tCO2e over the project life.

Further to the above, it is envisaged the well test rates, well testing period and the number of appraisal wells can be reduced with learnings from each drilling/HFS campaign in Valhalla which will significantly reduce gas and condensate flaring and associated emissions.

Figure 4-6 provides a summary of GHG mitigation measures considered part of the GHG reduction exercise.

Figure 4-5: GHG Mitigation Measures for the Projects

The following section provides more details of the GHG offset requirements along with an estimate of GHG estimate for the project.

5 Valhalla E&A Program GHG Emissions v EPA NetZero 2050 Target

The WA EPA has been actively pursuing GHG emissions reduction in the state as the emissions from the state have increased by 11% in the past decade, mainly due to the commissioning of new LNG projects in the northwest of the state. The WA EPA has mandated emissions reduction targets for projects with more than 100,000 tCO2e/year of GHG emissions. The EPA has requested project proponents demonstrate a trajectory of carbon emissions reductions towards NetZero by 2050. Refer to ESD Requirement 78 for Valhalla Project.

5.1 Valhalla NetZero Targets

The two possible Program timelines considered for the Valhalla E & A program are, Timeline #1 - 3 years from 2024 and Timeline #2 – 7 years from 2024 are shown in Figure 5-1 along with the EPA NetZero 2050 trajectory based on the year 2020 baseline set by the EPA. Based on the EPA assessment of exploration phase emissions of a shale gas development, the project would have to either reduce or offset the emission above its target emissions as shown in Figure 5-1 for each of the years of the Valhalla E&A Program.

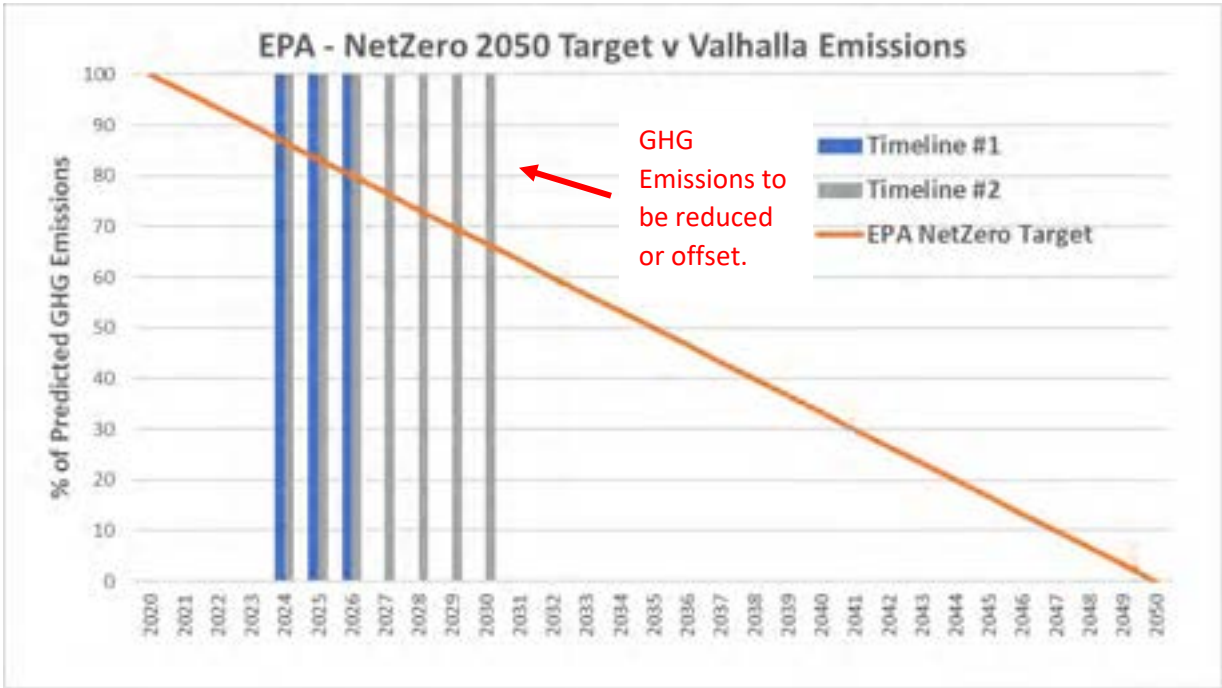

Figure 5-1: EPA NetZero Target v Valhalla Emissions

Table 5-1 provides a quantitative estimate of maximum GHG emissions and the reductions/offsets that could be mandated by EPA under the NetZero 2050 trajectory for the Valhalla E & A program under each of the two timelines considered. Depending on how EPA would assess a shale gas exploration project, BNR may or may not be required to offset part of the GHG emissions associated with the Valhalla E & A program beyond the annual EPA NetZero targets.

It should be noted that the GHG emissions offset/reduction quantities are much less for the optimistic drilling program Timeline #1 from 2024-2026 compared to Timeline #2. Hence, it would be beneficial for BNR to commit to a faster overall development timeline in a NetZero carbon environment.

Year		Timeline #1				Timeline #2			
		No of Wells	Max.Annual Emissions	Reduction Target	Reduced Emissions	No of Wells	Max.Annual Emissions	Reduction Target	Reduced Emissions
			tCO2e	%	tCO2e		tCO2e	%	tCO2e
1	2024	6	314,378	13	41,913	2	104,793	13	13,971

Table 5-1: Annual GHG Emissions and Targeted Emission reduction under EPA NetZero 2050

The EPA NetZero target and the offset/reduction requirement information can be shown below in a graphic form over the two proposed Timelines as show in Figure 5-2 and 5-3 below.

Figure 5-2: Timeline #1 - EPA NetZero Target v Emissions Offsets

Figure 5-3: Timeline #2 - EPA NetZero Target v Emissions Offsets

EPA requires that the project proponents provide compelling reasons for not meeting the NetZero 2050 trajectory. As described in sections 4.5 and 4.6 reasonably practical measures such as sale of condensate and the use of dual fuel engines is currently evaluated and may be undertaken at some point to minimize GHG emissions if appropriate equipment is available and reasonably practicable to apply. This will enable the project to reduce annual emission by around 8-10%. The capture and sale of all well test flow gas is not viable due to a lack of gas markets close by and the unpredictable nature of an exploration and appraisal drilling program which cannot commit to the sale of fixed volumes and time frames unlike in a gas plant. BNR will be required to assess annual emissions and when deemed to have exceeded the EPA NetZero 2050 trajectory targets the project proponents could utilize authorized offsets mechanisms to meet these targets.

5.2 GHG (carbon) Offsets

The EPA advises that where carbon offsets are to be implemented, they should meet offset integrity principles and be based on clear, enforceable and accountable methods. For example, the EPA recognises Australian Carbon Credit Units(ACCUs) issued under the Carbon Credits (Carbon Farming Initiative) Act 2011 (Cth) as meeting these standards. Compliance offsets under the Safeguard Mechanism, as well as voluntary offsets purchased to reduce residual emissions, may contribute to a proponent's Greenhouse Gas Management Plan and will be recognised by the EPA [2].

BNR Climate Change Policy (June 2021) has committed to NetZero by 2050 and the Valhalla E & A Program is committed to progressively reduce emissions over the years to achieve this target. Depending on how EPA would assess a shale gas exploration project, BNR may or may not be required to offset part of the GHG emissions associated with the Valhalla E & A program beyond the EPA NetZero targets via an accredited Australia Carbon abatement program.

5.3 GHG Emissions Reporting

The WA EPA supports the requirements for proponents to periodically report against their interim targets as outline in their GHG Management Plan. EPA prefers this reporting to be aligned with the five-year milestone set out in Article 4 of the Paris Agreement. The EPA will also consider undertaking its own periodic statewide reporting, under section 16(i) of the EP Act, to provide public advice on GHG emissions and the progress of mitigation measures developed and implemented by major proposals within WA [2]. The Valhalla E&A program will meet all state and national GHG emissions reporting requirements.

It should be noted that corporate reporting thresholds for GHG emissions are much lower under the National Greenhouse and Energy Reporting Act 2007 (NGER Act) where 25,000 tCO2 per facility and 50,000 tCO2 per corporate group is mandated.

6 Concluding Remarks

The Valhalla E & A Program GHG emissions estimate was carried out based on the information provided by BNR for the drilling program and the HFS operations. The calculations and other relevant information are provided in a separate spreadsheet (NimblEng Valhalla GHG Emissions Estimate Rev G) as part of this report.

Hydraulic Fracture Stimulation (HFS) or fracking of shale gas formations has been carried out in Australia for over the past 50 years, with over 900 production wells have been fracture stimulated in the Cooper-Eromanga Basin in South Australia and Queensland[13]. Out of the 10,664 CSG wells drilled in Queensland, 8.8 percent have been hydraulically fractured within the Surat and Bowen Basins up until December 2017 [14]. The lifting of the moratorium on HFS in 2019 in Northern Territory has seen projects in the Beetaloo Basin ramp up over the past couple of years under the new Code of Conduct set by the NT Government. Similarly, the WA government is working on introducing its own Code of Conduct for the Shale Gas industry based on the WA Scientific Inquiry on Hydraulic Fracturing. One of the main concerns related to the shale gas industry has been associated with the GHG emissions during exploration, appraisal and development activities of the upstream sector due to the higher number of wells associated with shale gas projects and the flaring associated with the development compared to conventional gas field developments. Therefore, it is essential for the project proponents to tackle this issue early in the project and provide adequate GHG mitigation measures throughout the lifecycle of the project.

The WA EPA Assessment of the Valhalla Gas E & A program will be the first hydraulic fracturing project in WA since the lifting of the moratorium. The Environmental Protection Act process requires that proponents prepare detailed Environmental Impact Assessment (EIA) information that provides the public and regulatory agencies with the data they require to decide on project approval. The Environmental Management Plan (EMP) documents filed by proponents in the Beetaloo Basin in NT EPA over the past 3 years provides good guidance for projects in WA with respect to their EMPs.

The Valhalla E&A program annual emission could range from 100,000 – 600,000 tCO2e per year depending on the number of wells drilled in a year, and the total GHG emissions could range from 1,093,000 to 1,603,300 tCO2e depending on the number of test days utilised per well. In comparison the recently approved Waitsia Stage 2 Gas Project with a 250 TJ/d export capacity has annual emissions of 300,000 tCO2e/y, and the proposed Pluto LNG Train 2 has annual emissions of 1,465,000 tCO2e/yr. Therefore, one would expect EPA to scrutinise the Program's GHG emissions and proposed mitigation measures in detail. The Waitsia Stage 2 Gas Plant Project has committed to offset all CO2 associated with the feed gas from the onset of the project and has committed to further reduce emissions as per the Figure 6-1 in line with EPA's NetZero 2050 trajectory [15]. Woodside's 2 train Pluto LNG facility has committed to reduce or offset emissions in order to meet WA EPA NetZero 2050 target as shown in Figure 6-2 [16].

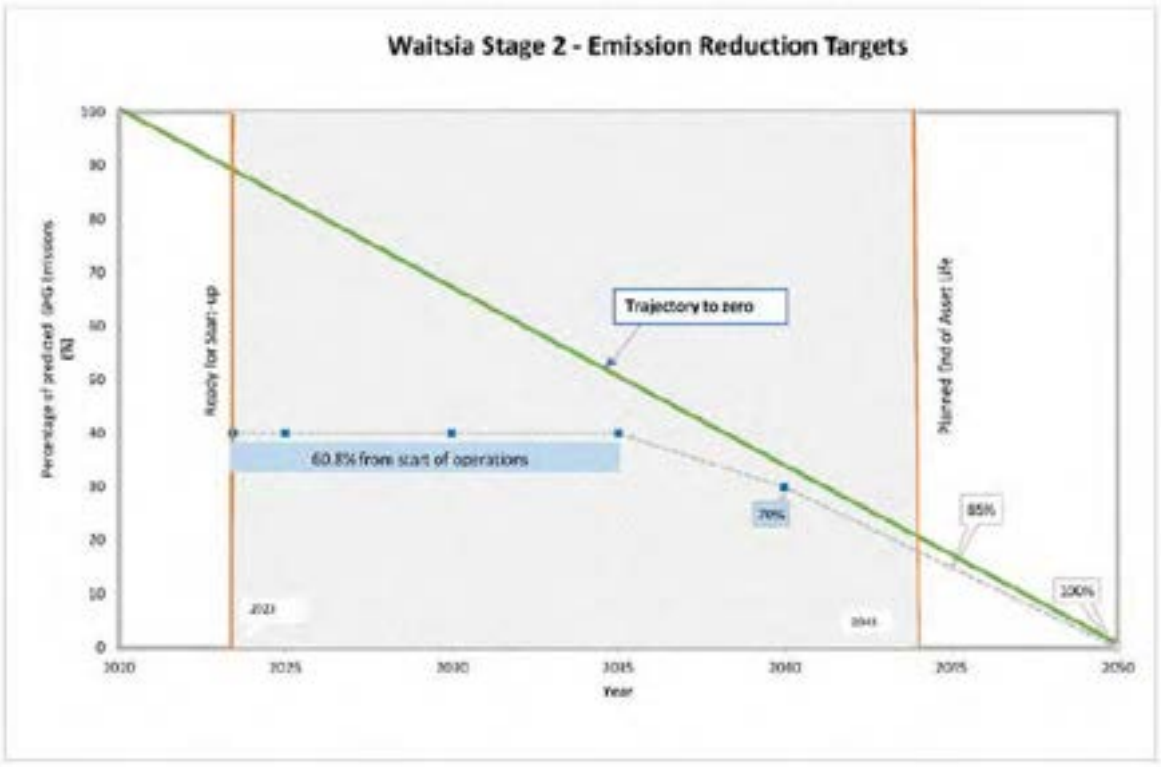

Figure 6-1: Waitsia Stage 2 Gas Plant NetZero Target (Mitsui E &P 2020)

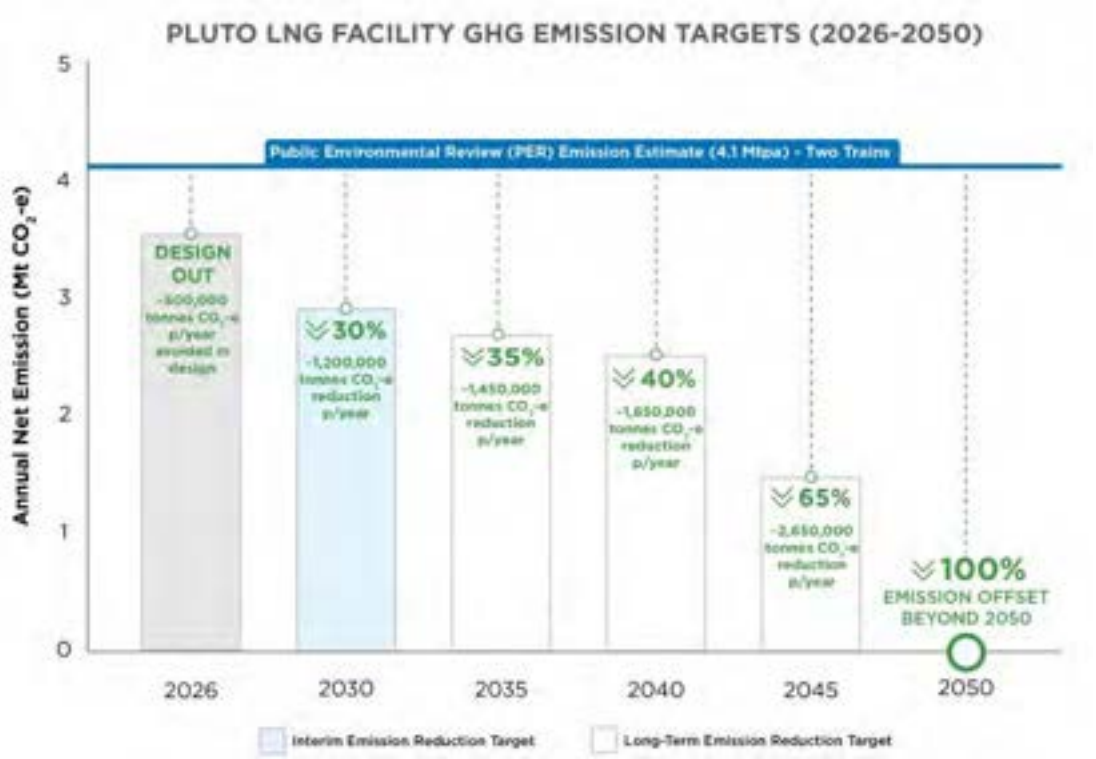

Figure 6-2: Pluto LNG Train 2 NetZero Target (Woodside, 2021)

The nature of an exploration and appraisal program does not allow project proponents to provide firm annual emissions estimate unlike a gas plant or an LNG plant. When developing a gas field, the execution and evaluation of each drilling campaign plays a significant role in subsequent drilling campaigns, number of wells, duration of the well tests and associated GHG emissions. The uncertain nature of the drilling campaigns does not allow project proponents to commit to upfront investment in gas and condensate capture and sales infrastructure from the onset of the exploration program. Therefore the Valhalla project proponents will be required to carefully evaluate capital costs of various capture options and ensure reasonably practical measures are undertaken to reduce emissions as much as possible while providing offsets when EPA NetZero emissions targets are deemed to be exceeded. This is also in line with other project in WA who are drilling conventional exploration and appraisal wells in the state and are currently flaring gas at the exploration phase of their projects. One possible alternative for BNR is to negotiate with EPA and agree to 'carry forward' mechanism for the carbon emissions from the exploration and appraisal phase in full or in part to the production phase and offset these emissions at the later part of the project.

Based on the current maximum flare rates over the 20 well E & A program a volume of nearly 17 bcf of gas and 334,000 bbls of condensate could be flared. At a sale price of 2 $/GJ for gas and 30 $/bbl for condensate puts the value of these hydrocarbons around $ 45 million. The maximum emissions above the EPA NetZero trajectory that requires to be offset could be as high as 423,700 tCO2e over the project life, which at a carbon price of $50/tonne could cost over $21 Million for the project. The Australian Carbon Credit Units (ACCUs) are currently trading at $21/tCO2e and several operators are currently using a carbon price of up to $80/tCO2e as part of their project costs to account for carbon emissions costs. BNR should carefully assess the impact of carbon price for the entire project while evaluating the GHG emissions reduction measures such as capture and utilization of gas as CNG or LNG from the project over the exploration, appraisal and development phase.

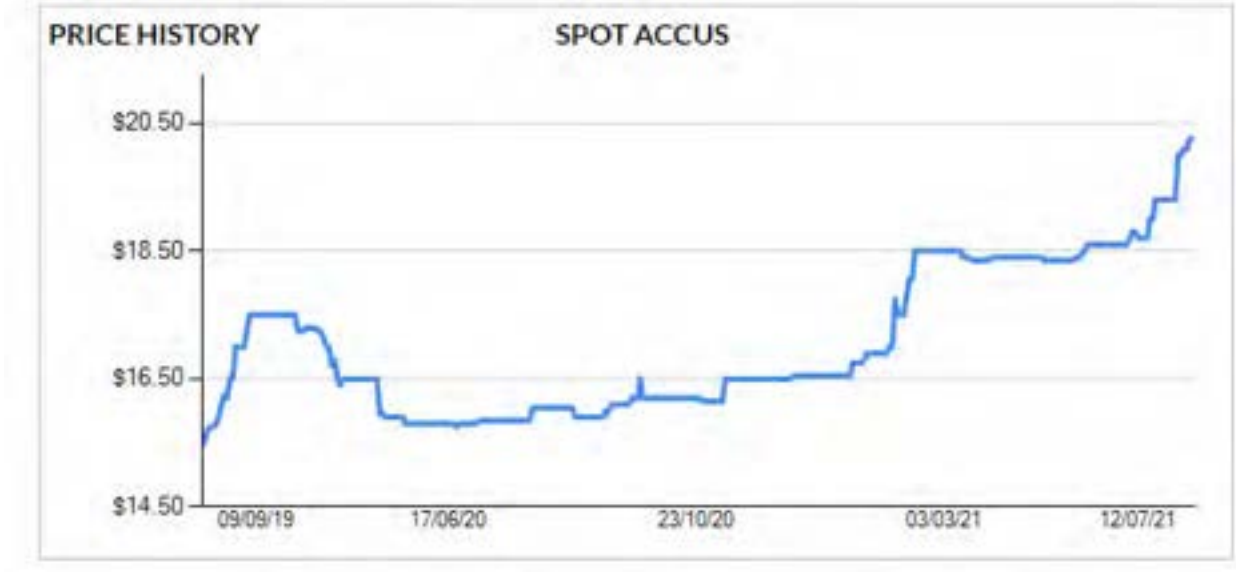

Figure 6-3: Australian Carbon Credit Units Price (July, 2021))

The Western Kimberley region utilises LNG trucked from Karratha (located nearly 1000km away) in Power plants in Broome, Derby and other remote towns. These power plants are operated by Energy

Developments Limited (EDL) who also operate the mini-LNG plant in Karratha to produce and supply LNG via multi-trailer trucks to these power plants. The total gas demand of these power plants range from 6-10 TJ/d. EDL is a potential customer if part of the gas can be captured and sold as LNG at an appropriate price.

The NetZero 2050 target set by the West Australian government has been a challenge for all gas developers in the state. The carbon abatement associated with the shale gas well tests during the exploration, appraisal and development phase of the project creates a bigger challenge in developing the Canning Basin due to the lack of existing gas infrastructure and a pipeline to market. The Canning Basin shale gas project proponents need to look at innovative concepts to capture this gas and get it to market as opposed to flaring at site where economically feasible. This would also help overcome public perceptions and regulatory pressures while providing confidence to the industry in setting a pathway for low-carbon shale gas development in the state. BNR is uniquely positioned to bring their US expertise in developing state-of-the-art low-carbon footprint shale development to Australia compared to other local shale developers.

Addendum to Peer Review Report

10th June 2024

Following the submission of the Valhalla Greenhouse Gas Emissions Management Plan (GHG EMP) Peer Review Report Revision 0 to Australasian Environmental Solutions (AES), the peer review process identified several recommendations.

AES thoroughly examined these recommendations and has since issued Revision 4 of the GHG EMP, which addresses the original Peer Review recommendations.

A subsequent review of additional information has been performed on the GHG EMP, the findings of which are encapsulated in the following summary.

This addendum documents the iterative process of review and refinement undertaken to ensure the GHG EMP's alignment with best practices and regulatory standards.

Recommendations	GHG EMP Rev 4 Peer Review
Emission targets: Increase Valhalla GHG EMP interim target to 43% reduction of baseline by 2030 to align with Commonwealth targets rather than the historical 28%.	Emission targets throughout the GHG EMP have been updated from 28% to 43%.
Methane monitoring: Given the duration of this program and the number of wells proposed, the GHG EMP should consider utilising methane detection technologies to verify ambient-level methane across the project locations after the completion of the exploration and appraisal program.	Under Section 5 of the GHG EMP, Table 5-2 demonstrates a commitment to methane monitoring after the completion of the Proposal if methane levels are above the detection limit of 3.3 mg/m^3.
Offset location and type: Provide further detail on the preferred location or types of offsets that will be utilised to satisfy any emission liabilities.	The GHG EMP has been updated to include Section 3.11, preferred offsets and availability. This section provides detail on: • Estimated volumes of offsets • Preferred type of offsets • High-level assessment of near-term offset volume forecasts.
Offset availability: The GHG EMP should include an assessment of offset availability relevant to the worst-case potential emission liabilities and forecast market availability out to 2030.	

Basis of Conclusion

The additional information in the updated Revision 4 of the Valhalla GHG EMP addresses the identified recommendations in the Valhalla GHG EMP Peer Review Report Revision 0.

1 Introduction

Australasian Environmental Solutions engaged Evolveable Consulting Pty Ltd to perform an independent peer review of the Bennett Resources (BNR) Valhalla Greenhouse Gas Environmental Management Plan (GHG EMP) per the Western Australian Environmental Protection Authorities (EPA) *Environmental Factor Guideline: Greenhouse Gas Emissions*.

1.1 Scope

The scope of the peer review is to:

- Review emission calculations.
- Assess the demonstration of best practices relevant to the project scope.
- Review industry benchmarks, and
- Review offset liabilities and plans to satisfy (integrity and availability).

1.1.1 Project context

The project under review involves an unconventional exploration and appraisal drilling program, coupled with Hydraulic Fracture Stimulation (HFS), within the confines of Petroleum Exploration Permit EP 371 in the Canning Basin, located in the Shire of Derby/West Kimberley, Western Australia.

The primary objective of this proposal is to assess the substantial tight gas reserves anticipated in the area. Should the exploration efforts yield a petroleum resource, testing to ascertain the quality and volume of gas within the well will be necessary. The outcomes of these tests are crucial as they will inform the company's decision-making process regarding the commercial viability of the reserves.

The project is time-bound, considering the exploration and appraisal activities. Each well represents a unique emissions event, distinct from those associated with continuous operations related to a production phase. This delineation and context are essential as they underpin the practicality of implementing best practice technologies throughout the exploration and appraisal program.

1.2 Documentation Reviewed

As part of this process, the following documentation was reviewed:

- Bennet Resources, Valhalla Gas Exploration and Appraisal Program Greenhouse Gas Environmental Management Plan, Rev 4, BNR_HSE_MP_014
- GHG EMP Supporting documentation:
    - Data and calculations – Valhalla GHG Estimates_Rev G
    - Valhalla Exploration Program GHG Management Report Rev0
    - Appendix H.1 – Valhalla Air Quality and GHG Monitoring Report

- Independent Scientific Panel Inquiry into Hydraulic Fracture Stimulation in Western Australia Final Report to the Western Australian Government September 2018
- Government of Western Australia, Position Paper, Monitoring, mitigation and offsetting of Greenhouse Gas Emissions for hydraulic fracturing proposals in Western Australia.
- Northern Territory government, Code of Practice: Onshore Petroleum Activities in the Northern Territory
- United States Natural Gas STAR Program
- International Petroleum Industry Environmental Conservation Association. (2014, February 1). Green completions.
- Government of Australia's 2008 National Greenhouse and Energy Reporting (Measurement) Determination
- American Petroleum Institute's 2009 Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry

2 Emission and Target Review

2.1 Emission Estimates

As part of this review, the emissions quantifications were reviewed to ensure alignment with the requirements of the EPA *Greenhouse Gas Emissions Factor guideline*.

Section 3.1 of the GHG EMP outlines the emissions estimates for the project. This review concentrates on the material emission sources, gas and condensate flaring, which account for over 90% of the total project emissions.

A review of both calculations and assumptions was performed.

2.1.1 Scope 1

The emissions data and associated assumptions that formed the basis of the GHG EMP are consistent with recognised industry best practices in emissions accounting. Scope 1 and 3 emissions have been quantified using primarily:

1. Government of Australia's 2008 National Greenhouse and Energy Reporting (Measurement) Determination
2. American Petroleum Institute's 2009 Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry

The duration of exploration and appraisal activities will vary well to well. The GHG EMP provides a 60-day and 90-day well range, which covers a minimum and maximum scenario to cover this uncertainty.

The project is split into two phases, with Phase One maximum emissions estimated to be < 200,000 tonnes CO_{2e} per year and Phase Two maximum emissions estimated to be < 600,000 tonnes CO_{2e} per year. The total emission estimated for the exploration and appraisal program is 1,603,293 tonnes of CO_{2e}.

The methodology applied aligns with that specified within the Western Australian Government Position Paper on monitoring, mitigation and offsetting of Greenhouse Gas Emissions for hydraulic fracturing proposals in Western Australia in the context of exploration and appraisal program; as such, it does not estimate emissions for potential future operations.

2.1.2 Scope 2

Section 3.1.2 of the GHG EMP specifies that the exploration and appraisal program will operate independently without importing power from external sources; as such, there are no Scope 2 emissions.

2.1.3 Scope 3

The base case for the GHG EMP is that there will be no Scope 3 emissions as all produced fluids will be combusted via the flare.

The GHG EMP presents an alternate option that the proponent is considering: selling condensate produced during the well testing program to external parties, thereby reducing Scope 1 emissions associated with the condensate portion (approximately 129,000 tonnes CO_{2e}). This is a common practice in other regions where supporting infrastructure is readily available near the exploration site location, and demand for the condensate product exists.

Scope 3 estimates for this scenario have been estimated utilising the Government of Australia's 2008 National Greenhouse and Energy Reporting (Measurement) Determination.

Although this alternate scenario would directly reduce Scope 1 emissions, the end use of the condensate product is likely the same. When this end use is combined with transportation of the condensate between the site location and third party, the net emissions of this alternate scenario will increase compared to the base case.

2.2 Emission Targets

Section 3.3 of the GHG EMP proposes emission reduction targets that align with the historical Australian Commonwealth emission target of 28% below 2005 levels by 2030. Given Australia's increased commitment in 2022 to achieve 43% below 2005 levels by 2030, it is recommended that BNR align their commitment to the Commonwealth Government at a minimum.

Recommendation: Increase Valhalla GHG EMP interim target to 43% reduction of baseline by 2030 to align with Commonwealth targets.

3 Best Practice Review

A desktop literature review was conducted to gain insight into the best practices within the onshore gas exploration and appraisal industry in Western Australia and nationally.

International guidance was leveraged to understand best practices relevant to exploration and appraisal well greenhouse gas measures.

A summary of key guidance documents reviewed to inform this peer review is provided in Table 1.

TABLE 1: LITERATURE REVIEW OF EMISSION MITIGATION STRATEGIES IN ONSHORE PETROLEUM OPERATIONS

Guidance Document	Summary
Government of Western Australia: Monitoring, mitigation and offsetting of Greenhouse Gas Emissions for hydraulic fracturing proposals in Western Australia	This paper explains the State Government's position regarding implementing the Independent Scientific Panel Inquiry into Hydraulic Fracture Stimulation in Western Australia's (the Inquiry) recommendations for monitoring, mitigating, and offsetting greenhouse gas emissions from hydraulic fracturing proposals in Western Australia. Five key guiding principles are outlined, including the consideration of exploration activities. Since this paper was published, the Environmental Protection Authority has released further guidance on greenhouse gas emissions.
Independent Scientific Panel Inquiry into Hydraulic Fracture Stimulation in Western Australia Final Report to the Western Australian Government September 2018	Section 10.9 of the Inquiry Report discusses Green Completions, specifically Recommendation 12, which acknowledges that reduced (greens) emissions completions should be a requirement apart from the early exploratory phase of development. Section 10.10 states that GHG emissions from the exploration phase of unconventional gas exploration present a negligible environmental risk, even without reduced emission completions.

Northern Territory government, Code of Practice: Onshore Petroleum Activities in the Northern Territory. Link: Code of practice: Onshore petroleum activities in the Northern Territory	The Code of Practice for Onshore Petroleum Activities in the Northern Territory provides a framework for ensuring environmentally responsible petroleum operations within the region.
United States, Natural Gas STAR Program. Link: https://www.epa.gov/natural-gas-star-program/reduced-emission-well-completions-and-workovers	This initiative offers strategies for reduced emission well completions and workovers, aiming to minimise the environmental impact of natural gas operations.
IPIECA. (2014, February 1). Green completions. Link: https://www.ipieca.org/resources/energy-efficiency-solutions/units-and-plants-practices/green-completions-2014/	This resource offers insights into energy-efficient solutions for green completions in the oil and gas industry.

The review of best practice guidance indicates substantial opportunities for emission reductions throughout the well development phase and subsequent production and operational stages. However, it is recognised that the emission reduction opportunities for exploration and appraisal are somewhat constrained due to various factors, including, but not limited to:

- Site location
- Lack of pre-existing infrastructure, such as gas transmission networks.
- The regional context of the operations.

3.1 Scope 1

Section 3.4.1 of the GHG EMP summarises potential emission reduction opportunities, which was informed by a detailed study, the Valhalla Gas Exploration Program GHG Management Report.

This report reviewed national and international sources for information on industry best practices. It considered each of the proposed emission reduction opportunities in the context of the Valhalla Exploration and Appraisal program, including site location constraints, regional context, and regulatory regime. In addition, it considered the findings of the Western Australian Hydraulic Fracking Inquiry Report.

A total of nine emission reduction opportunities are identified for the project. Of the nine, four have been selected to reduce Scope 1 emissions. These are:

- Well design – Horizontal vs Vertical

- Flaring versus venting
- Selection of efficient diesel generators
- Renewables (lighting towers)

Condensate capture for sale or other use has been identified as an opportunity under consideration; however, the lifecycle perspective has been considered and presented within the GHG EMP. Whilst this presents an opportunity to reduce Scope 1 emissions, it shifts the emissions to Scope 3 while adding further transportation emissions. Additional details on this are provided in Section 3.2.3.

Three emission reduction opportunities were identified but not progressed due to commercial or technical feasibility. These were:

- Renewables for power generation
- Compressed Natural Gas
- Micro Liquified Natural Gas

Conclusion:

- The emission reduction opportunities proposed within the GHG EMP for exploration and appraisal activities align with national and international industry best practices when considering the project-specific context.

3.2 Scope 2

There are no Scope 2-related emissions on this project.

3.3 Scope 3

The project's base case scenario assumes no scope 3 emissions related to the consumption of gas and condensate, and test fluids will be flared onsite.

As detailed in Section 2.1.3 of this review, if the condensate portion of well test fluids is separated and captured, it could be utilised; however, considering the emissions related to the transport of these fluids combined with a similar end use, this would increase the project's net emissions.

3.4 Monitoring

A baseline GHG monitoring assessment was undertaken in 2021 to satisfy the requirements of the Monitoring, mitigation, and offsetting of GHG Emissions for hydraulic fracturing proposals in Western Australia. This evaluation included baseline methane measurements at three sites, with results below the detection threshold of 6.6 milligrams.

The GHG EMP Table 5-1 and Table 5-2 commit to monitoring the direct activity-related emissions but not ongoing monitoring of the broader ambient environment.

With technological advancements in methane detection in recent years, various cost-effective methods are now accessible for frequent monitoring of methane concentrations throughout the project area during operational activities.

The Code of Practice for Onshore Petroleum Activities in the Northern Territory outlines the routine periodic atmospheric monitoring programme requirements, including specific methane monitoring requirements prior to the exploration and production phases.

Recommendation: Given the duration of this program and the number of wells proposed, the GHG EMP should consider utilising methane detection technologies to verify ambient-level methane across the project locations after the completion of the exploration and appraisal program.

3.5 Industry Benchmarking

Section 3.2 of the GHG EMP provides a summary of industry benchmarking analysis. This section compares five analogous projects within Australia, evaluating them based on emissions intensity and total emissions per well.

For further context to support the peer review, international projects were reviewed by examining flow rate performance from comparable global developments to support the benchmarking context.

The benchmarking reveals that in emissions intensity—measured in tonnes of CO_2 equivalent (CO_{2e}) per well per day, Valhalla Phase 1 and Phase 2 exhibit the highest values among the projects evaluated. This higher intensity reflects the anticipated flow rates of the Valhalla project wells over a shorter duration (days) than other programs.

When analysed on a per-well basis, measured in total emissions per well, Valhalla Phase 1's potential maximum emission volumes align closely with those of the other projects. However, the emission volumes for Valhalla Phase 2 wells surpass the comparative projects for the minimum and maximum projected cases, attributed to the higher expected flow test rates due to reservoir properties.

Tamboran Resources has recently concluded an exploratory campaign in the Beetaloo Basin of the Northern Territory, identified as the Origin Energy Velkerri wells, as delineated in the GHG EMP. The appraisal of the SS-1H well yielded a flow rate of 2.9 million cubic feet per day (MMcf/d)[1], which, when normalised over a distance of 1,000 meters, equates to 5.8 MMcf/d. The original Origin Valkerri Greenhouse Gas Management Plan estimated a 2.5 TJ/day flow rate.

For the Valhalla wells, the proposed flow rates are estimated to be similar to the Tamboran Resources well in Phase 1 (5.9 MMcf/d) and approximately double in Phase 2 (10.7 MMcf/d).

[1] ASX announcement: Tamboran Resources Corporation, April 2024

This highlights the influence of expected well rates relative to emissions in exploration and appraisal activities.

As stated in Section 3.1 of this document, nine emissions reduction strategies have been evaluated, with several selected for implementation to reduce Scope 1 emissions.

4 Offset Integrity and Availability

In accordance with the EPA *Environmental Factor Guideline - Greenhouse Gas Emissions,* a review of the GHG EMP Offset commitments has been completed as part of this review.

Due to the project being exploration and appraisal, the volume of emissions will be proportional to the flaring durations required to gain sufficient data to understand the reservoir. The GHG EMP has set targets regarding emissions; if these are exceeded, this will trigger offset liabilities for the project.

A review of GHG emission calculations and targets estimates that the project's offset liabilities could be greater than 400,000 tonnes CO_{2e}.

The recommendation identified in Section 2.2 of this document regarding increasing the interim target to align with Australia's commitment may impact the number of offsets required for this proposal.

4.1 Offset Integrity

Section 3.9 of the GHGEMP has set the following offset integrity criteria.

- Australian Carbon Credit Units (ACCUs) issued under the Commonwealth Carbon Credits (Carbon Farming Initiative) Act 2011
- eligible offsets under the standard Climate Active Carbon Neutral Standard for Organisations (Climate Active 2020), in addition to ACCUs, include:
    - verified emission reductions issued under the Gold Standard
    - verified carbon units issued under the Verified Carbon Standard
    - Certified emissions reductions are issued per the Kyoto Protocol rules from Clean Development Mechanism projects.
    - removal units issued by a Kyoto Protocol country on the basis of land use, land use change and forestry activities under Article 3.3 or Article 3.4 of the Kyoto Protocol.

No details on the preferred location or types of offsets are provided within the GHG EMP.

Recommendation: Provide further detail on the preferred locations or types of offsets that will be utilised to satisfy any emission liabilities.

4.2 Offset Availability

The GHG EMP does not estimate potential liabilities due to the uncertain nature of exploration and appraisal activities. However, based on a review of calculations, liabilities could be greater than 400,000 tonnes CO_{2e} in a worst-case emissions scenario for the project.

No assessment relevant to the availability of offsets has been completed within the GHG EMP; however, in Section 3.9 of the GHG EMP BNR commits that where and when required, they will acquire carbon offsets that meet the contemporary Australian acceptability standards (e.g., they should meet offset integrity principles and be based on transparent, enforceable, and accountable methods).

Based on a review of ACCU volumes estimated for 2024, sufficient offsets will likely be available in the near term. However, the process for assessing this availability is not evident within the GHG EMP.

Recommendation: The GHG EMP should include an assessment of offset availability relevant to the worst-case potential emission liabilities and forecast market availability out to 2030.

5 Summary

Basis of Conclusion

We believe the evidence we have obtained is sufficient and appropriate to provide a basis for the conclusion regarding:

- Emissions quantification: The methodology and assumptions utilised to estimate emissions align with good emissions accounting practices.
- Demonstration of best practice: The scope 1 emission reduction opportunities assessed within the GHG EMP for exploration and appraisal activities align with both national and international industry best practices relevant to the context of the project based on the literature review performed.
- Offset integrity: BNR have committed to reputable carbon offset integrity standards within the GHG EMP.

Recommendations:

- Emission targets: Increase Valhalla GHG EMP interim target to 43% reduction of baseline by 2030 to align with Commonwealth targets rather than the historical 28%.
- Methane monitoring: Given the duration of this program and the number of wells proposed, the GHG EMP should consider utilising methane detection technologies to verify ambient-level methane across the project locations after the completion of the exploration and appraisal program.
- Offset location and type: Provide further detail on the preferred location or types of offsets that will be utilised to satisfy any emission liabilities.
- Offset availability: The GHG EMP should include an assessment of offset availability relevant to the worst-case potential emission liabilities and forecast market availability out to 2030.

We have:

- Used our professional judgement to assess the GHG emission quantification methodology for the Project along with the proposed emission reduction opportunities.
- Considered credible external literature sources to inform our basis for best practice mining design and operations and
- Ensured that the review team possessed the appropriate knowledge, skills and professional competencies.

Use of this Peer Review Report

This report has been prepared for AES to provide a conclusion on demonstrating best practice, offset integrity, and availability, but it may not be suitable for any other purpose.

This Peer Review is based on our current understanding and knowledge, which may evolve, and we make no express or implied representations or warranties regarding the accuracy or completeness of the conclusions in this report. We disclaim any assumption of responsibility for any reliance on this report.

Statement of independence, impartiality and competence

Evolveable Consulting is an independent environmental engineering company specialising in decarbonisation, sustainability, and circular economy services.

No team member has a business relationship with BNR, beyond that required of this assignment. Evolveable Consulting conducted this review independently, and to our knowledge, there has been no conflict of interest.

The review team has extensive experience conducting assurance reviews of engineering designs, environmental information, systems, and processes.

EXECUTIVE SUMMARY

Bennett Energy Pty Ltd proposes to develop the Valhalla Gas Exploration and Appraisal Program (hereafter the Project) approximately 55 km west of Fitzroy Crossing, Western Australia. The focus of the Project is to extract hydrocarbons from 2,000-4,000 metres below ground level (mbgl). However, some abstraction of groundwater will be required for construction and other purposes from two shallow wells (or bores) at each of the 10 drill pads where deep wells will be installed. Bennett Energy commissioned Bennelongia Environmental Consultants to undertake desktop assessment of subterranean fauna values around the Project in relation to this abstraction of groundwater.

The databases of the Western Australian Museum and Bennelongia, as well as environmental reports for nearby mining projects and scientific literature, were searched for records of subterranean fauna within a 100 x 100 km square around the Project.

Although there has been little sampling of subterranean fauna in the desktop search area, up to 21 species of stygofauna and at least seven species of troglofauna have been collected. Many of the records have been from limestone caves north of the Project but stygofauna has been recorded in geologies similar to that of the Project area. Stygofauna occurs in the surficial aquifers of the Fitzroy Trough, quite likely in richer communities than current data suggest. More generally, the Kimberley is known to support moderate stygofauna communities, while to the south communities in the Pilbara are rich. Little is known about troglofauna in the Kimberley.

The Project proposes to abstract a maximum volume of 33,400 kL per well over a six-month period. Modelled drawdown in the shallow aquifer is small, being less than 1 m beyond 56 m from each bore. Thus, it is unlikely that drawdown will have negative impacts on stygofauna conservation values. Drawdown would also have no negative impact on troglofauna, if these animals are present.

1. INTRODUCTION

Bennett Energy Pty Ltd proposes to develop the Valhalla Gas Exploration and Appraisal Program (hereafter the Project) approximately 55 km west of Fitzroy Crossing, Western Australia (Figure 1). The unconventional drilling program proposes drilling up to 20 wells across 10 well sites within a previously explored area of Petroleum Exploration Permit EP 371 in the Canning Basin (Bennett Resources 2020). The Development Envelope encompasses 109 ha and the target hydrocarbons lie 2,000-4,000 metres below ground level (mbgl). Pumping of 33,400 kL per well over 6 months has been modelled, with drawdown of 1 m at a distance of 56 m from each well; recovery is expected within weeks following the cessation of pumping (Rockwater 2016).

Recognising the potential for Project development to affect subterranean communities, Bennett Energy commissioned Bennelongia Environmental Consultants to undertake desktop assessment of subterranean fauna values around the Project. In accordance with established guidelines (EPA 2016, 2021), the objectives of this report are:

- To collate records of subterranean animals from the proposal area and surrounds to determine the types of subterranean fauna present;
- To determine the conservation status of the subterranean species recorded and the known distribution of any conservation-significant species; and
- To estimate the likely impact of mining activities on subterranean fauna based on groundwater flow, direction, connectivity, and drawdown.

1.1. Climate, Geology, and Hydrogeology

The climate at the Project is tropical, with hot wet summers and warm dry winters. The nearest weather station (Ellendale, BOM site number 003008; 17.93°S, 124.81°E) reports an annual mean rainfall of 614.8 mm concentrated in January (168.2 mm) and February (155.7 mm), although annual rainfall ranges from 211.7 mm to 1,409 mm (Bureau of Meteorology 2023). Monthly maximum temperatures at Fitzroy Crossing (18.18°S, 125.56°E; data not available for Ellendale) are highest in November (40.9°C) and lowest in Jun (30.6°C). Evaporation exceeds rainfall (Rockwater 2016).

The Canning Basin is the second largest groundwater source by volume in Australia, following the Great Artesian Basin (Rockwater 2016). It spans 430,000 km^2 and its yield is estimated at 615,000-827,000 ML/yr. Geologically the basin is early Ordovician to early Cretaceous in age.

The proposed wellfield falls within the Fitzroy Trough, a north-west trending graben constituting a major subdivision of the Canning Basin. The Fitzroy Trough is approximately 110 km wide and is bounded by the Beagle Bay fault on the north-east and the Fenton Fault on the south-west. Geology in the trough is characterised by strata of aquifers and/or aquitards, beginning with the siltstone, shale, and sandstone Liveringa Formation at the surface and progressing through shale, sandstone, and siltstone aquifers/aquitards to the Laurel Formation; permeability and porosity decrease with depth. The surficial Liveringa Formation is middle-to-late Permian in age and exposed at the surface around the Project. The Laurel Formation hosts the target hydrocarbons and comprises limestone, shale, siltstone, and sandstone; it is a minor aquifer or aquitard 2,000-4,000 mbgl (Rockwater 2016).

Depth to the water table ranges from 30-36 m. This is a depth at which the richness of stygofauna communities usually declines substantially as a result of reduced inputs of nutrients and cardon from the surface. Groundwater in the more surficial formations is recharged by rainfall, a process slowed by fine-grained sediments throughout the Fitzroy Trough. Groundwater flow is westerly with discharge into the Fitzroy River (102 ML/d; INTERA 2023); the flow travels approximately 3 km in 500 years (Rockwater 2016). Groundwater is fresh (200 mg/L TDS) to brackish (1,000 mg/L TDS) in the surficial formations, but increasingly saline from 1,500 mbgl, and >70,000 mg/L TDS in the lowermost formations

(Rockwater 2016). In general stygofauna communities can be rich in salinities up to 25,000 mg/L, although few species in north-western Australia occur in water >10,000 mg/L (Halse 2018).

1.2. Subterranean Fauna Framework

The term subterranean fauna refers to animals living essentially full-time underground. Subterranean animals are divided into two types: stygofauna are aquatic animals that live below ground in water, while troglofauna are air-breathing animals that live underground and require very high humidity (Gibson *et al.* 2019). Stygofauna inhabit vugs, fissures, and interstitial spaces in groundwater aquifers, especially those in alluvium and calcretes. Troglofauna inhabit similar spaces above the water table but with more emphasis on vugs, fissures, and relatively large interstitial spaces.

Subterranean species share several convergent adaptations to life underground where it is dark and resources are limited. These include worm-shaped bodies, elongated chemosensory apparatus, loss of wings, transition towards K-selected breeding strategies, and the loss of skin colouration and eyes (Gibert and Deharveng 2002). Western Australia supports a particularly rich subterranean fauna outside caves (Humphreys 2000; UNESCO World Heritage Centre 2022), with estimates of over 4,000 species, 90% of which remain to be described (Guzik *et al.* 2011; Halse 2018a). Almost all subterranean animals in Western Australia are invertebrates, but fishes (Whitely 1945) and one snake (Aplin 1998) have also been recorded. Most subterranean species are inconspicuous, but contribute substantially to biodiversity and other values, for example by moderating groundwater quality (Hose and Stumpp 2019).

The distribution of subterranean animals is largely determined by prevailing lithology. In Western Australia, subterranean animals probably mostly occupy spaces only a few millimetres in width (Halse 2018a, b; Halse *et al.* 2018) but the key characteristics of their habitat(s) is that it is rich in such spaces (e.g. interstices in alluvium, screen, and voids; vugs, cavities, and fissures in consolidated geologies) and that the spaces are well connected laterally and vertically. Lateral connectivity facilitates dispersal of animals, while vertical connectivity ultimately to the surface is crucial for delivering carbon and other nutrients to subterranean ecosystems (Korbel and Hose 2011). Connectivity may be disrupted by a range of factors, including dykes, major landscape features, and chemical barriers.

Subterranean animals tend to have limited distributions. Most stygofauna species exhibit short range endemism (SRE), having substantially smaller ranges than Harvey's (2002) SRE criterion of 10,000 km^2 (Cooper *et al.* 2007; Cooper *et al.* 2002; Eberhard *et al.* 2009). The ranges of troglofauna have yet to be investigated in detail but are mostly even more restricted than those of stygofauna, with many species having linear ranges less than 10 km (Halse and Pearson 2014; Lamoreux 2004). Given that species with small ranges are more vulnerable to extinction following habitat degradation than wider ranging species, it follows that subterranean taxa are highly susceptible to anthropogenic threats, particularly large-scale excavation and groundwater abstraction (Halse 2018a; Ponder and Colgan 2002).

Stygofauna

Most stygofauna species in Western Australia are crustaceans, particularly ostracods and copepods, although other groups such as worms and beetles are sometimes abundant (DEC 2009; DPAW 2022; Matthews *et al.* 2019). The most productive known stygofauna habitats are saturated alluvial and calcrete aquifers associated with palaeochannel deposits, but stygofauna also inhabit karstic limestones, hyporheic zones, groundwater-fed springs, and aquifers in some iron formations, especially channel iron (Halse 2018b; Hyde *et al.* 2018). Stygofauna are rarely abundant where depth to the water table is more than 30 m below ground level (Halse 2018a; Halse and Pearson 2014). Aquifers with higher transmissivity are more likely to host stygofauna than aquifers with lower transmissivity (Maurice and Bloomfield 2012). Stygofauna mostly occur in fresh to hyposaline water (Halse *et al.* 2014; Humphreys *et al.* 2009), but can occur in higher salinities (Bennelongia 2016; Reeves *et al.* 2007; Watts and Humphreys 2006).

Troglofauna

Western Australia appears to be almost unique for its diverse and widespread troglofauna inhabiting small spaces in the vadose zone (Halse and Pearson 2014). The Western Australian troglofauna comprises mostly arthropods, with a variety of isopods, insects, spiders, pseudoscorpions, and millipedes, centipedes, and their allies represented. Troglofauna are particularly likely to occur in weathered or mineralised iron formations, alluvium or colluvium in valley-fill areas (including areas of karstic calcrete), and fractured sandstone (Halse 2018a). Troglofauna typically require relative humidity close to 100% (Howarth 1983).

1.2.1. Conservation legislation

Native flora and fauna in Western Australia are protected at both State and Commonwealth levels. At the state level, the *Biodiversity Conservation Act 2016* (BC Act) provides a legal framework for protection of species, particularly for species listed by the Minister for the Environment as threatened. In addition to the formal list of threatened species under the BC Act, the Department of Biodiversity, Conservation and Attractions (DBCA) also maintains a list of priority fauna species that are of conservation importance but, for various reasons, do not meet the criteria for listing as threatened. At the national level, the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) provides a legal framework to protect and manage nationally and internationally important flora, fauna and ecological communities.

Both the EPBC and BC Acts provide frameworks for the protection of threatened ecological communities (TECs), where an ecological community is defined as a naturally occurring group of plants, animals, and other organisms interacting in unique habitat (with the unique habitat created by the combination of the species and their landscape setting; DEC 2013). Communities occupying a small or threatened habitat are classified as threatened ecological communities (TECs) under the BC Act and the EPBC Act. Within Western Australia, DBCA also informally recognises communities of potential conservation concern, but for which there is little information, as priority ecological communities (PECs). The list of TECs recognised under the BC Act is larger than the EPBC Act list and has much greater focus on subterranean communities.

2. METHODS

The desktop assessment combined three sources of information using GIS mapping:

- Boundary information and description of Project activity was supplied by Bennett Energy.
- Records of subterranean animal occurrence in the vicinity of the project were obtained from the Western Australia Museum and Bennelongia databases, as well as relevant environment reports from other mines in the region and scientific literature.
- Boundaries of the subterranean fauna TECs and PECs were provided by DBCA and the Department of Mines, Industry Regulation, and Safety.
- Geological mapping to provide information about occurrence of likely subterranean fauna habitat.

Database searches covered two degree area centred on the Project (Figure 1). Analysis and mapping were undertaken using ArcGIS Pro v2.9.

3. SEARCH RESULTS

There has been little sampling of subterranean fauna in the desktop search area. No TECs or PECs are listed in the vicinity of the Project. However, up to 21 species of stygofauna have been collected in the desktop search area (Table 1, Figure 3).

Table1. Subterranean fauna surveys in desktop search area and results.

Pseudoscorpiones	Indohya napierensis	Vadose tube
	Cheiridium sp. nov.	Cave
Diplopoda	?*Stygochiropus* sp.	Cave

According to Rockwater (2016), nine stygofauna species have been collected from boreholes and a cave at the Ellendale Diamond Mine about 45 km north of the Project but one of the species (an ostracod) appears to be a surface species, based on photographs in MBS (2010), and another (a mite) cannot be identified with enough resolution to determine whether it is stygofaunal. Four species of stygofauna have been collected from about 30 west of the Project at the Duchess Paradise Project in geology similar to that of the Project. According to Museum records, a further seven species have been collected from caves and a sink hole in limestone ranges north and west of the Project (Table 1, Figure 2).

Museum records also show that at least seven species of troglofauna have been collected from caves north and west of the Project (Table 1, Figure 4). This includes two species belonging to the iconic troglofaunal group Schizomida. Rockwater (2016) points out that both schizomid species have eyespots and may be troglophiles rather than troglobites (the former are found in the twilight zone of caves; the latter in dark zones) but the key issue is that use subterranean habitats. without specific habitat information have not been included in Table 1 but it is likely that several other species recorded in the desktop search area, especially pseudoscorpions, represent troglofauna.

4. DISCUSSION

The lack of much subterranean fauna sampling of sampling in the Kimberley makes it difficult to assess the likely richness of subterranean fauna communities in the surficial aquifers of the Fitzroy Trough. Saccò *et al.* (2022) provide a summary of stygofauna richness patterns in the Kimberley that supports the picture, based on results of the desktop search, that stygofauna probably occur. While the depth to water table in the Project area suggests the community there will not be rich, more evidence from sampling is required to understand whether stygofauna occur at the Project and the nature of the community. Richness may be greater than current data suggest. Surficial aquifers in alluvium and in sediments below sand plain are potentially prospective for stygofauna (Halse 2018).

While the likelihood of stygofauna occurrence and the nature of any stygofauna community remains unclear, this has little relevance to an assessment of potential impacts of groundwater abstraction on stygofauna in the Project area because the maximum drawdown experienced at each bore is modelled to be only 1.2 m and to decline to 1 m at 56 m from the bore. The level of drawdown interpreted as having potential impact on stygoofauna is usually taken to be 2 m (EPA 2016). Both the very small spatial extent of drawdown, and the minimal drawdown itself at the Project, indicate the there is little likelihood of impact on stygofauna, irrespective of whether a stygofauna community is present.

As with stygofauna, the potential impact of the Project on troglofauna can be assessed by examining the potential impacts without reference to whether troglofauna occurs. The small modelled drawdown will have no impact on troglofauna. Ground disturbance will be limited to the drawdown associated with drilling and preparations for surface construction. These activities will have very little likelihood of impact on troglofauna, irrespective of whether a troglofauna community is present.

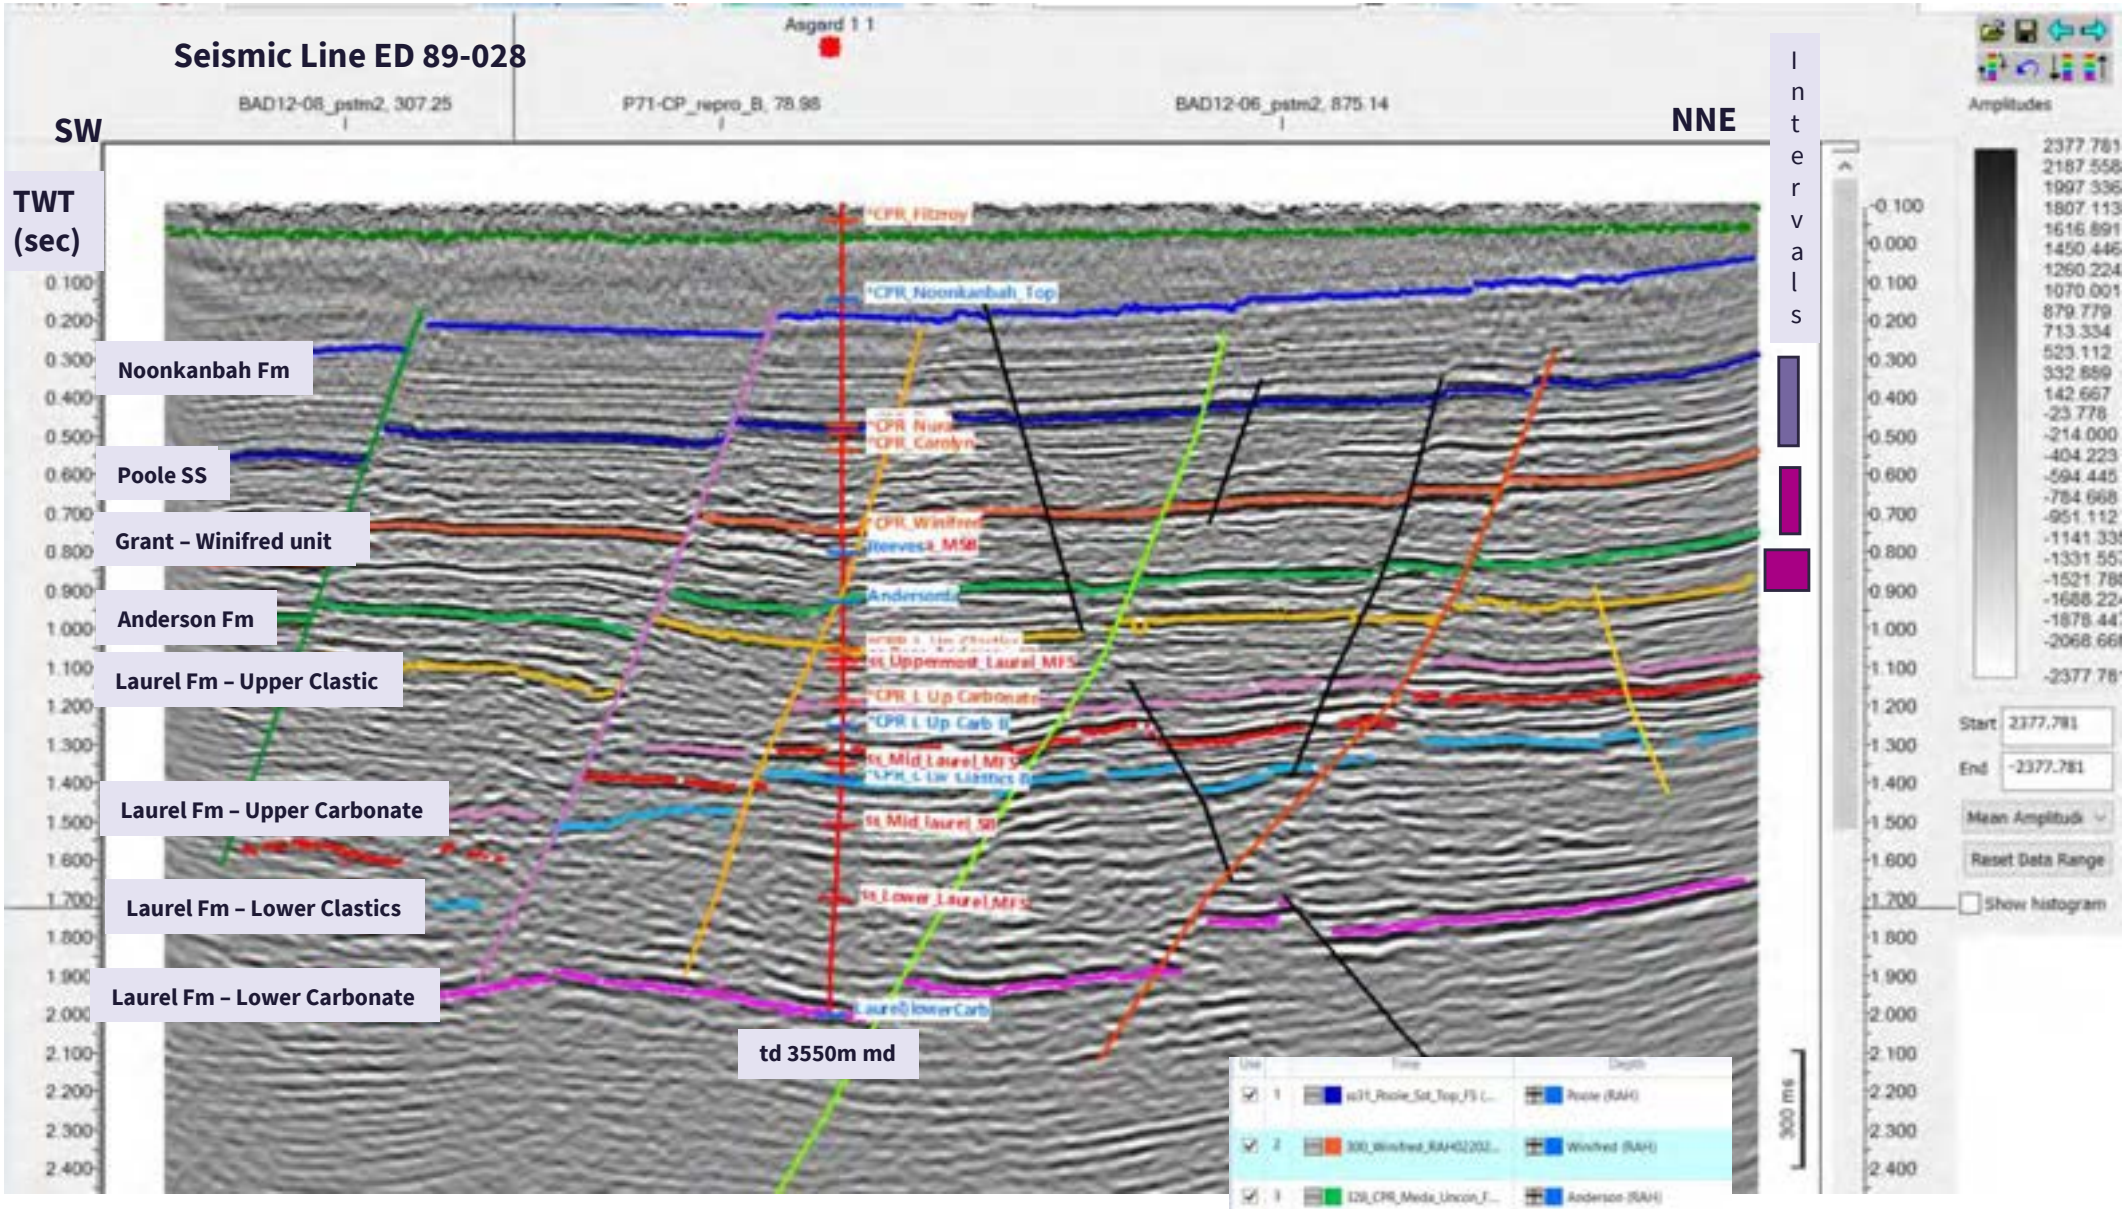
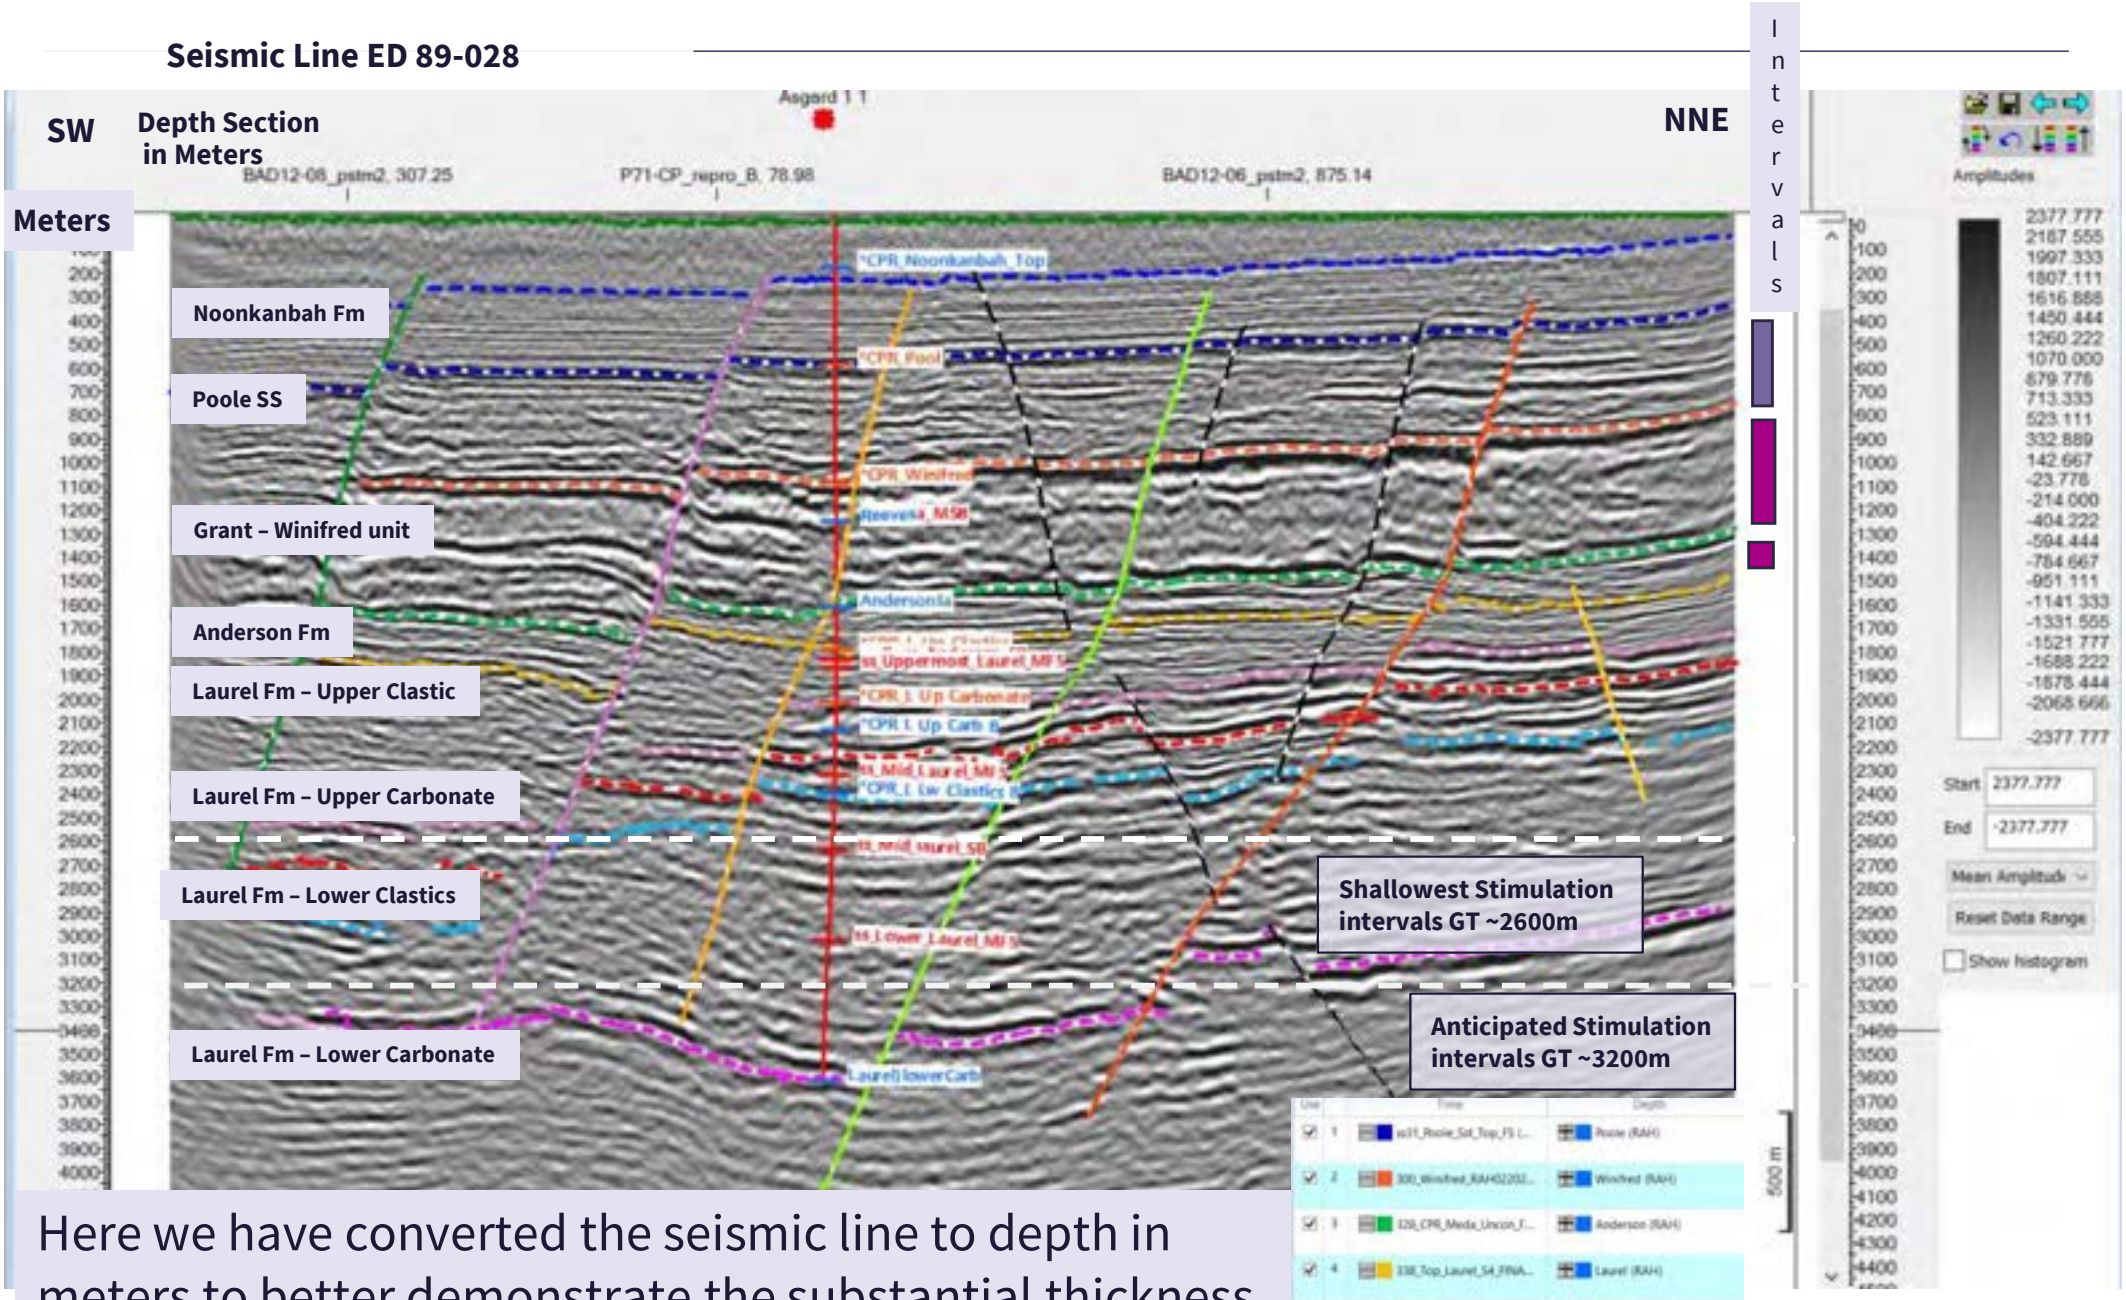
INTRODUCTION

Figure 1a, 2D Seismic time section showing key geological intervals for Anderson, Grant/Winfred and Poole Formations



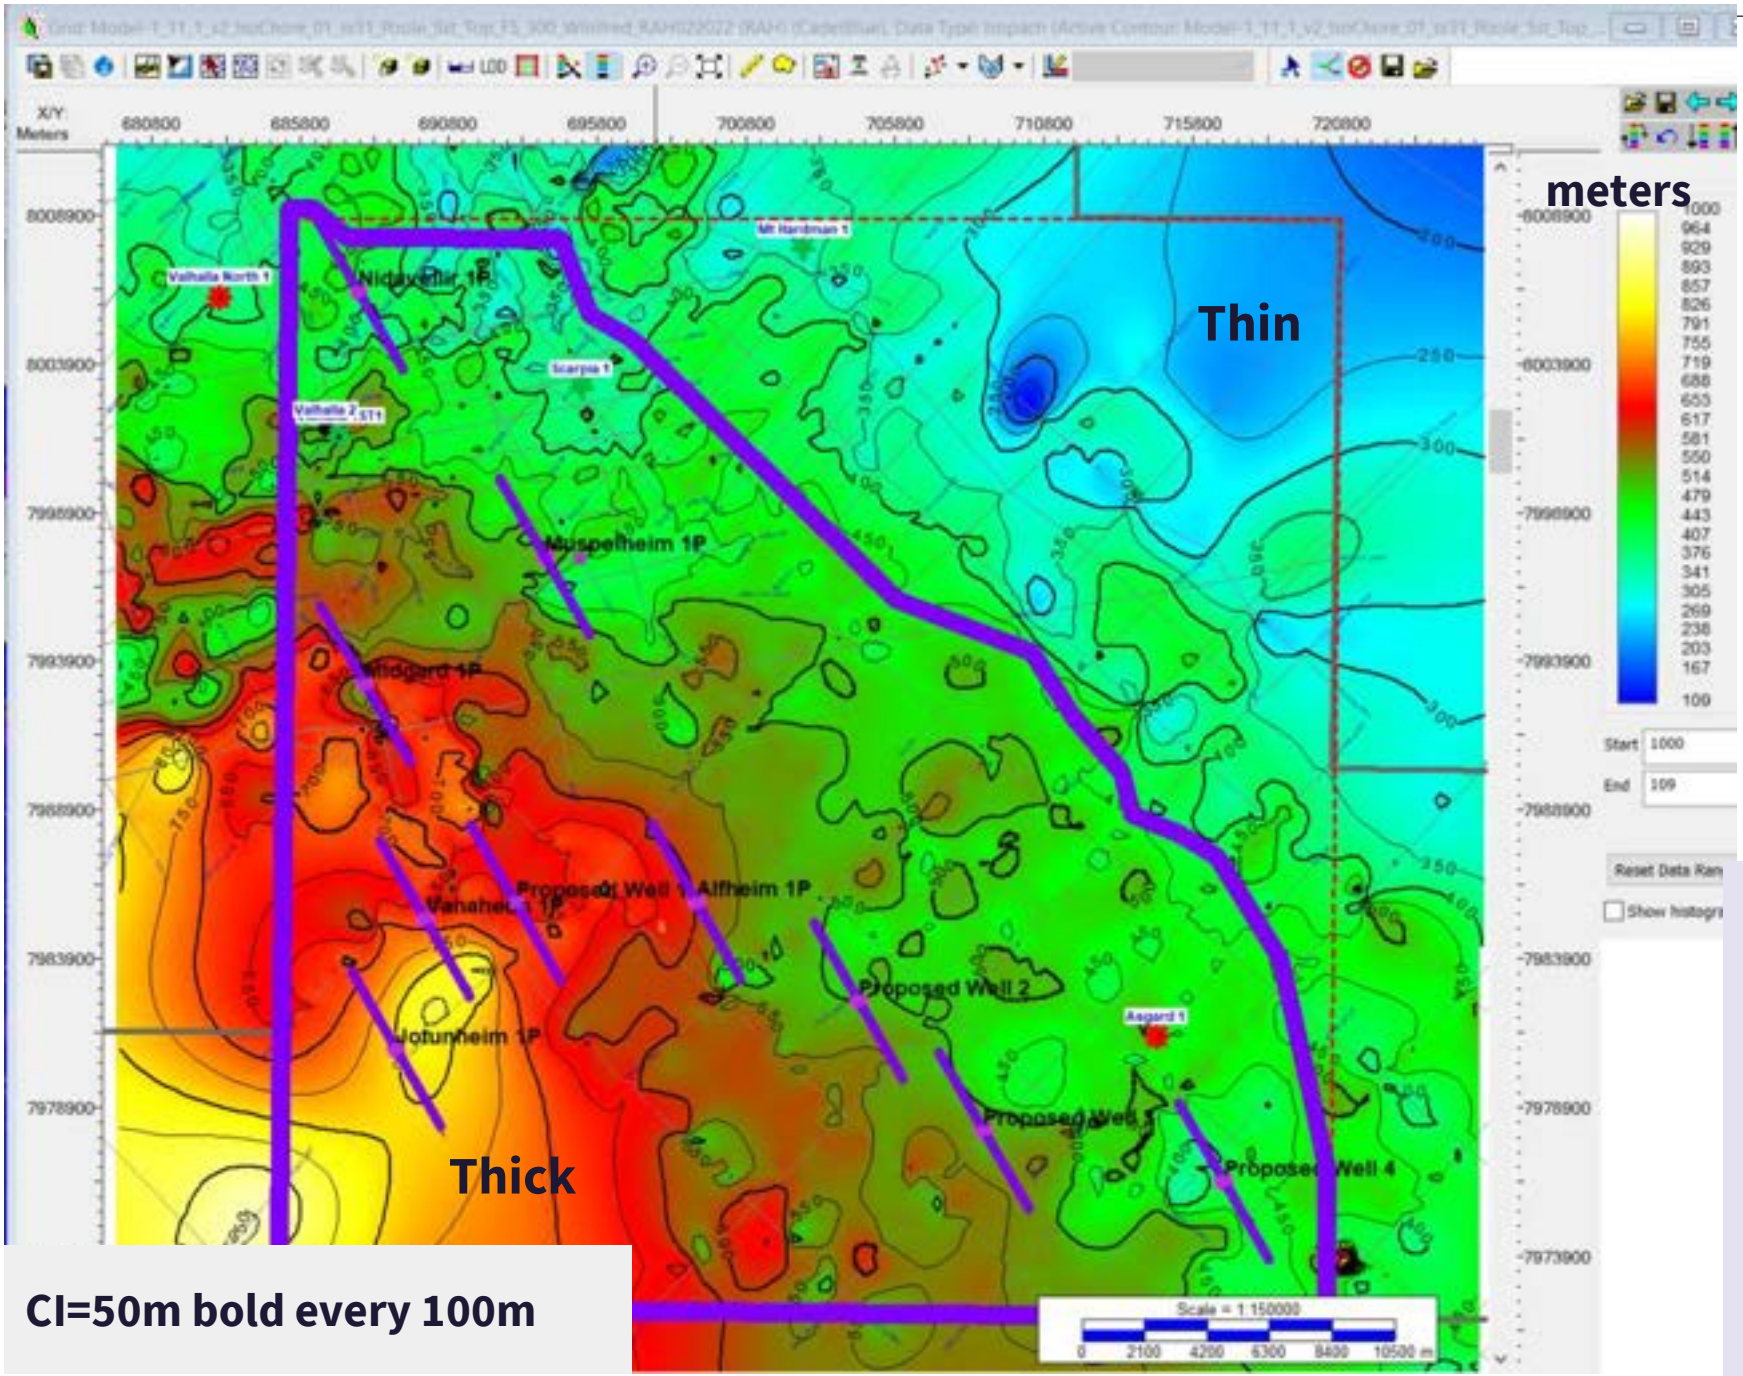
Geological Survey of Western Australia rpt 207 notes the difficulty of discerning the Anderson pick from Reeves in this area. Further stratigraphic study or additional well data is needed to understand the local unconformities and their timing.

Figure 1b, 2D seismic depth section showing key intervals of Anderson, Grant/Winfred and Poole Formations



Here we have converted the seismic line to depth in meters to better demonstrate the substantial thickness of the overlying sediment above any proposed HFS.

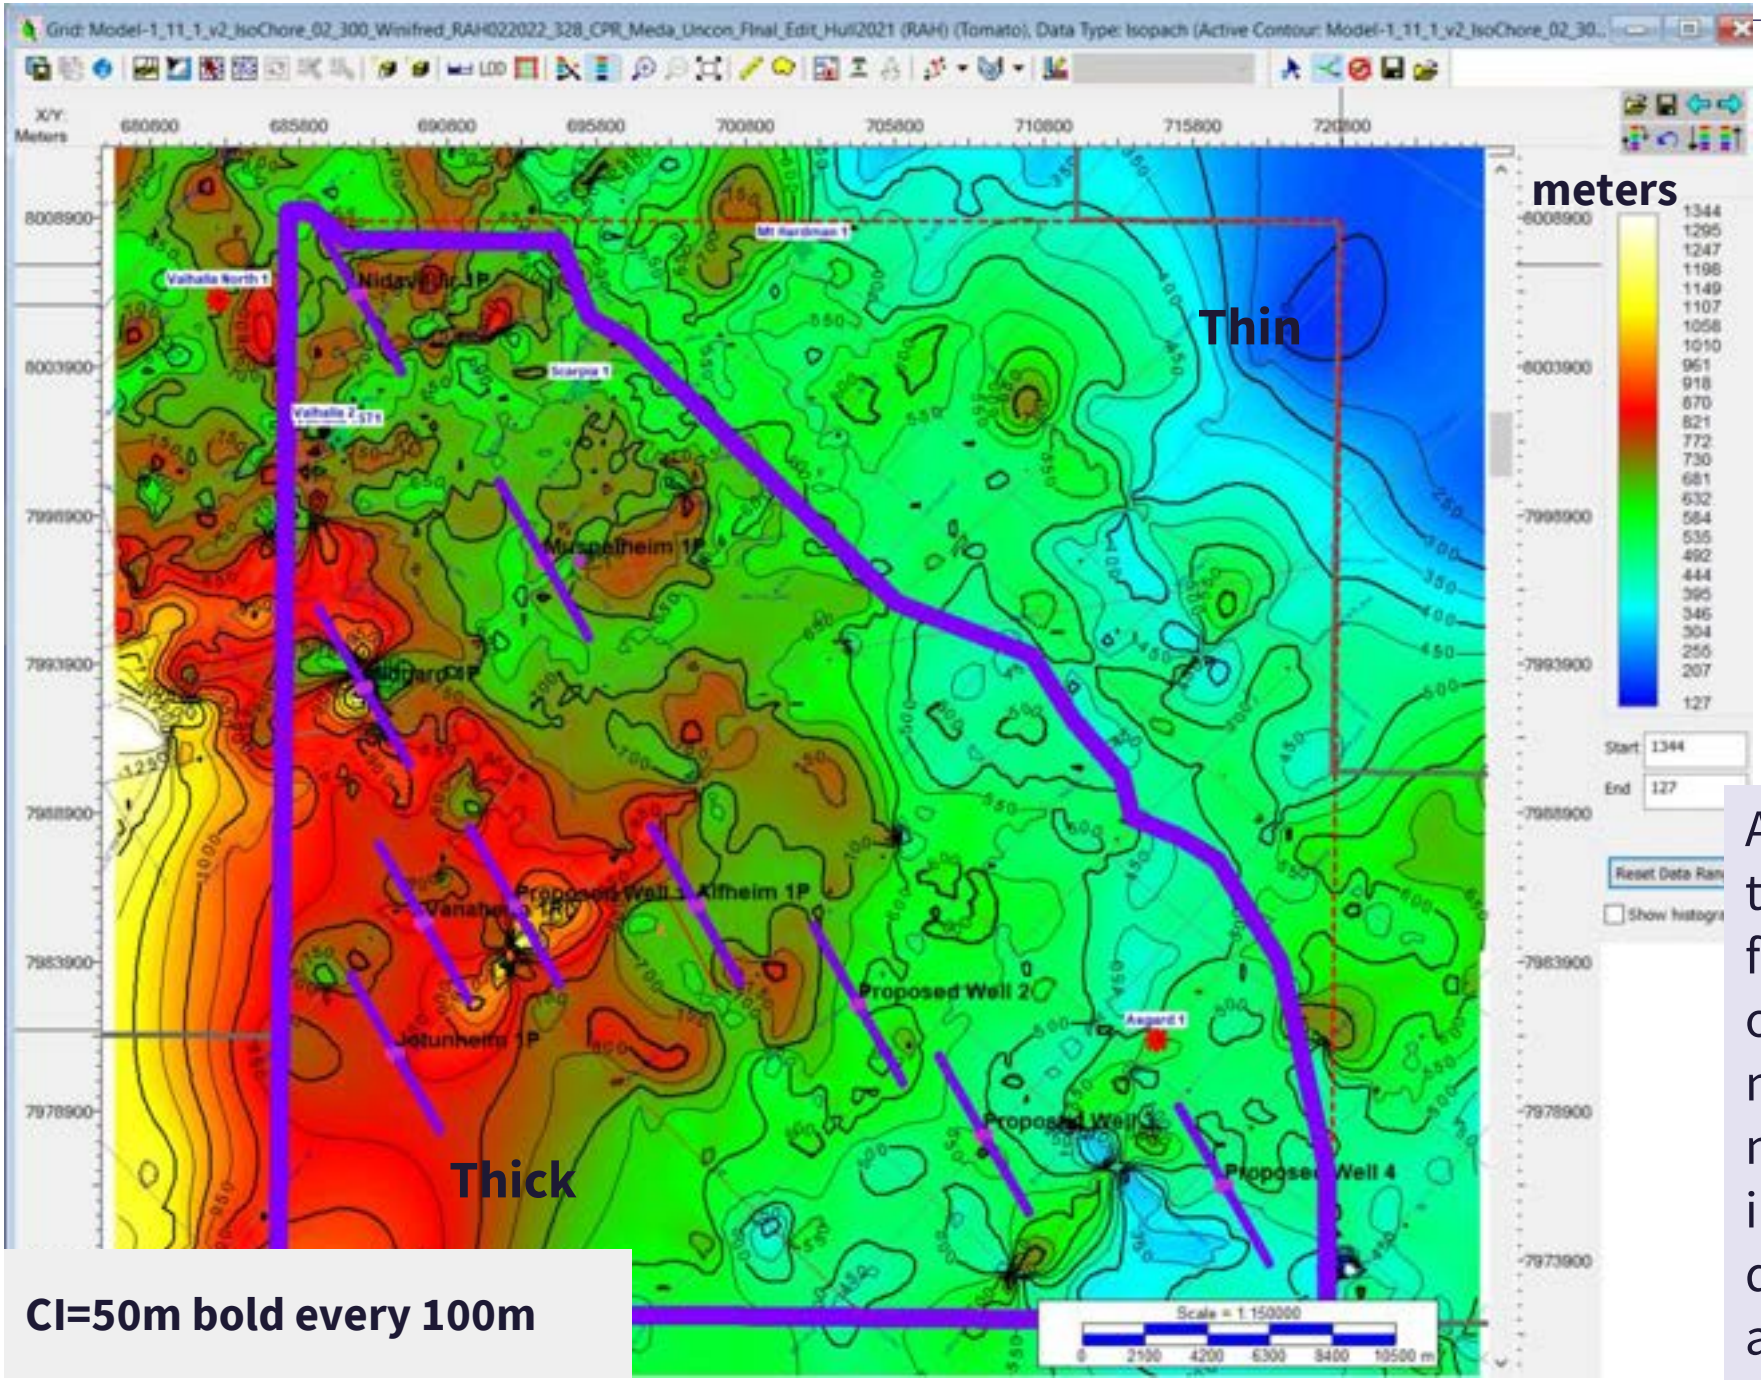
Figure 1c Poole to Grant/Winifred Isochore (Aquifer)



CI=50m bold every 100m

A substantial thick section from 400 m to over 900m is noted for this interval in the development area.

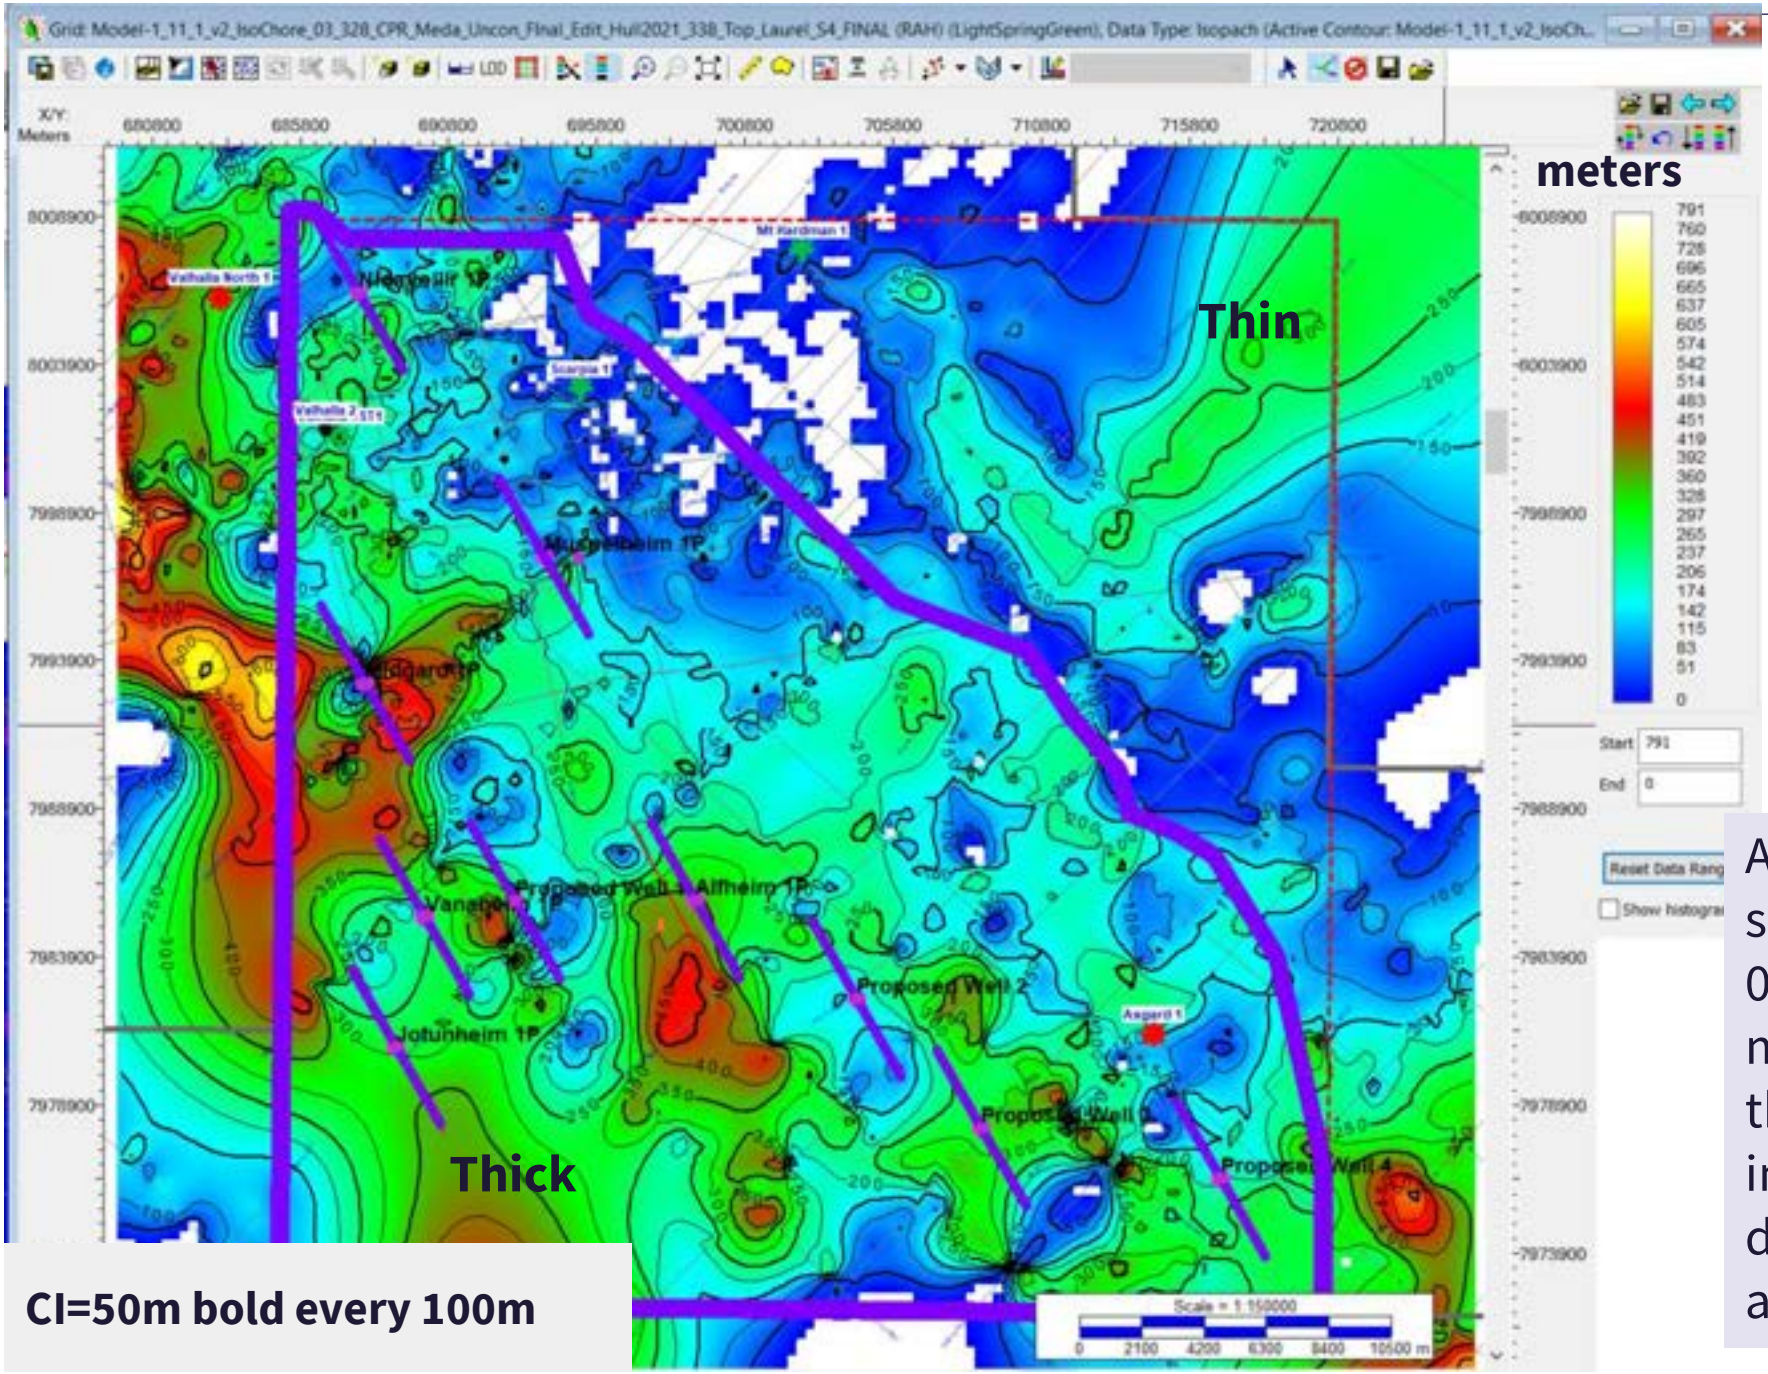
Figure 1d Winifred To Anderson Isochore (Non-Aquifer)



CI=50m bold every 100m

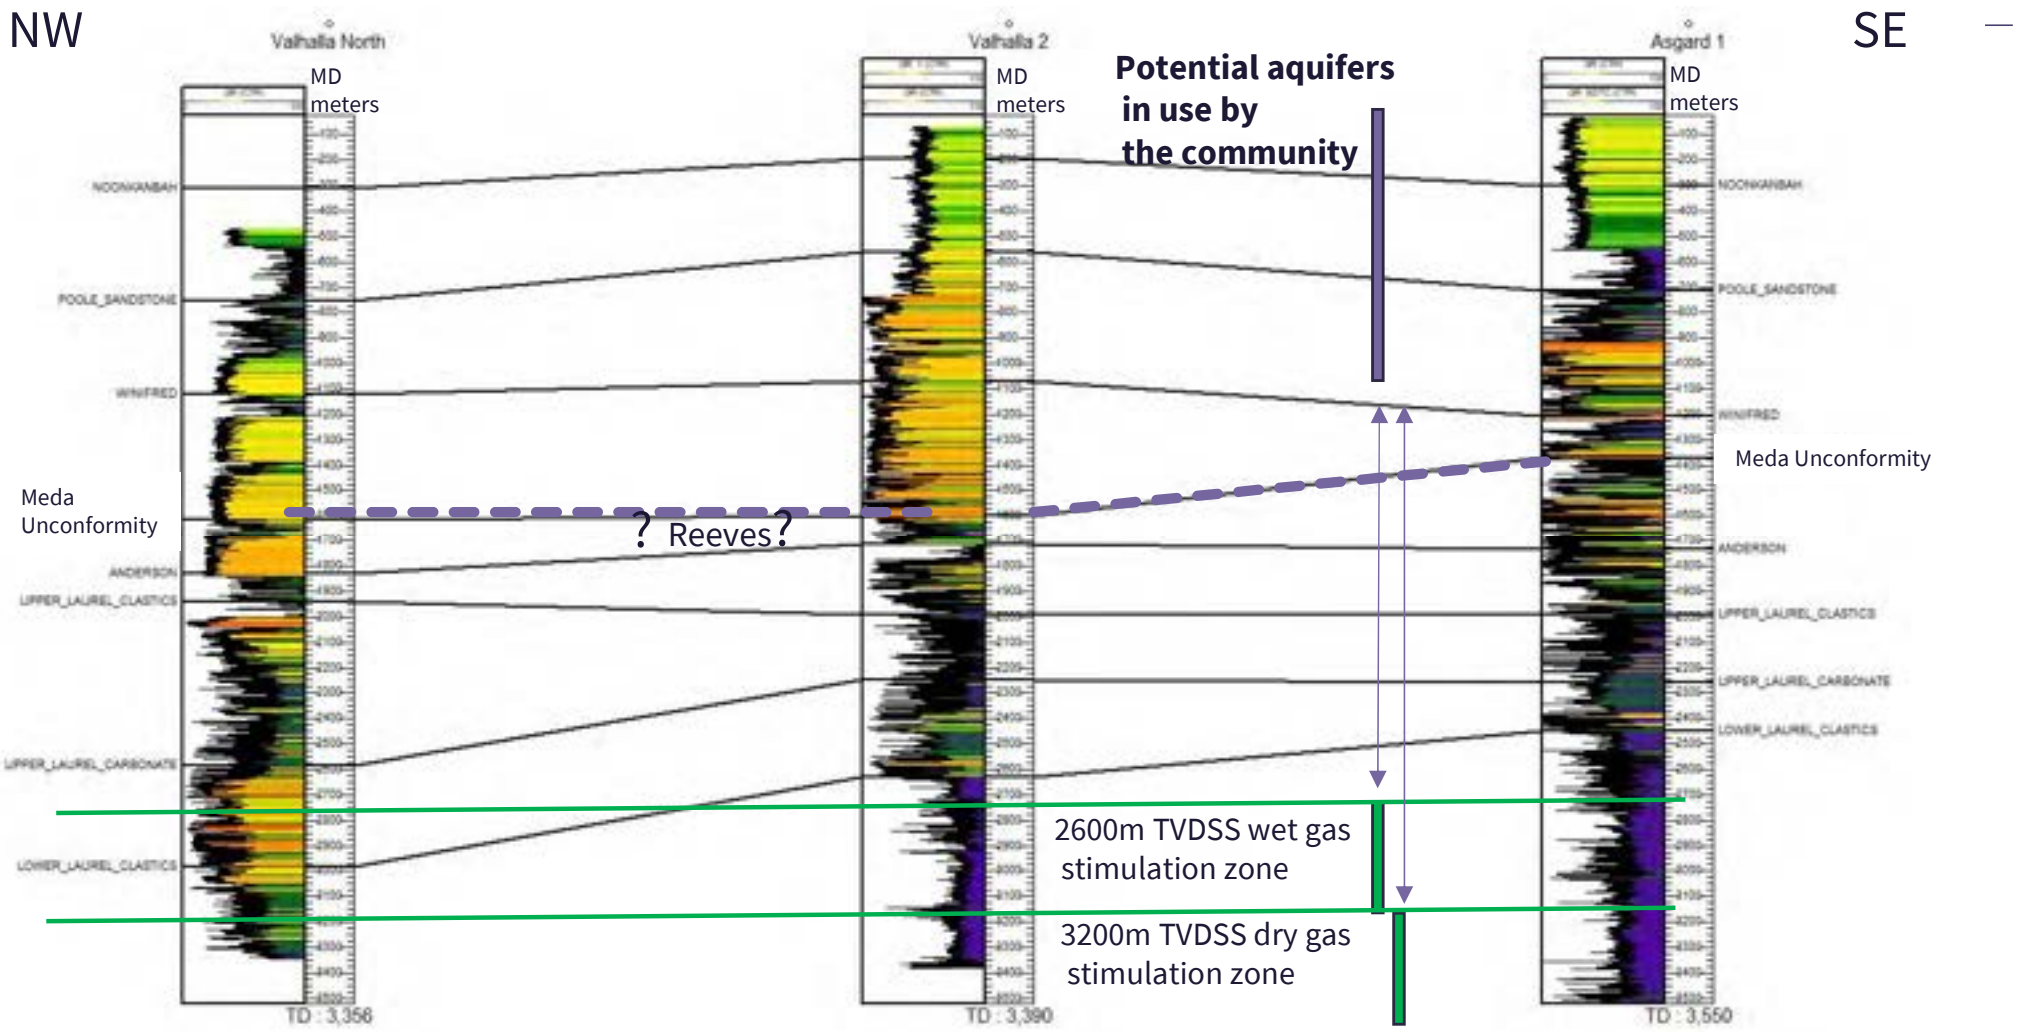
A substantial thick section from 500m to over 900m is noted for this non aquifer interval in the development area.

Figure 1e Anderson to Laurel Isochore (Non-Aquifer)



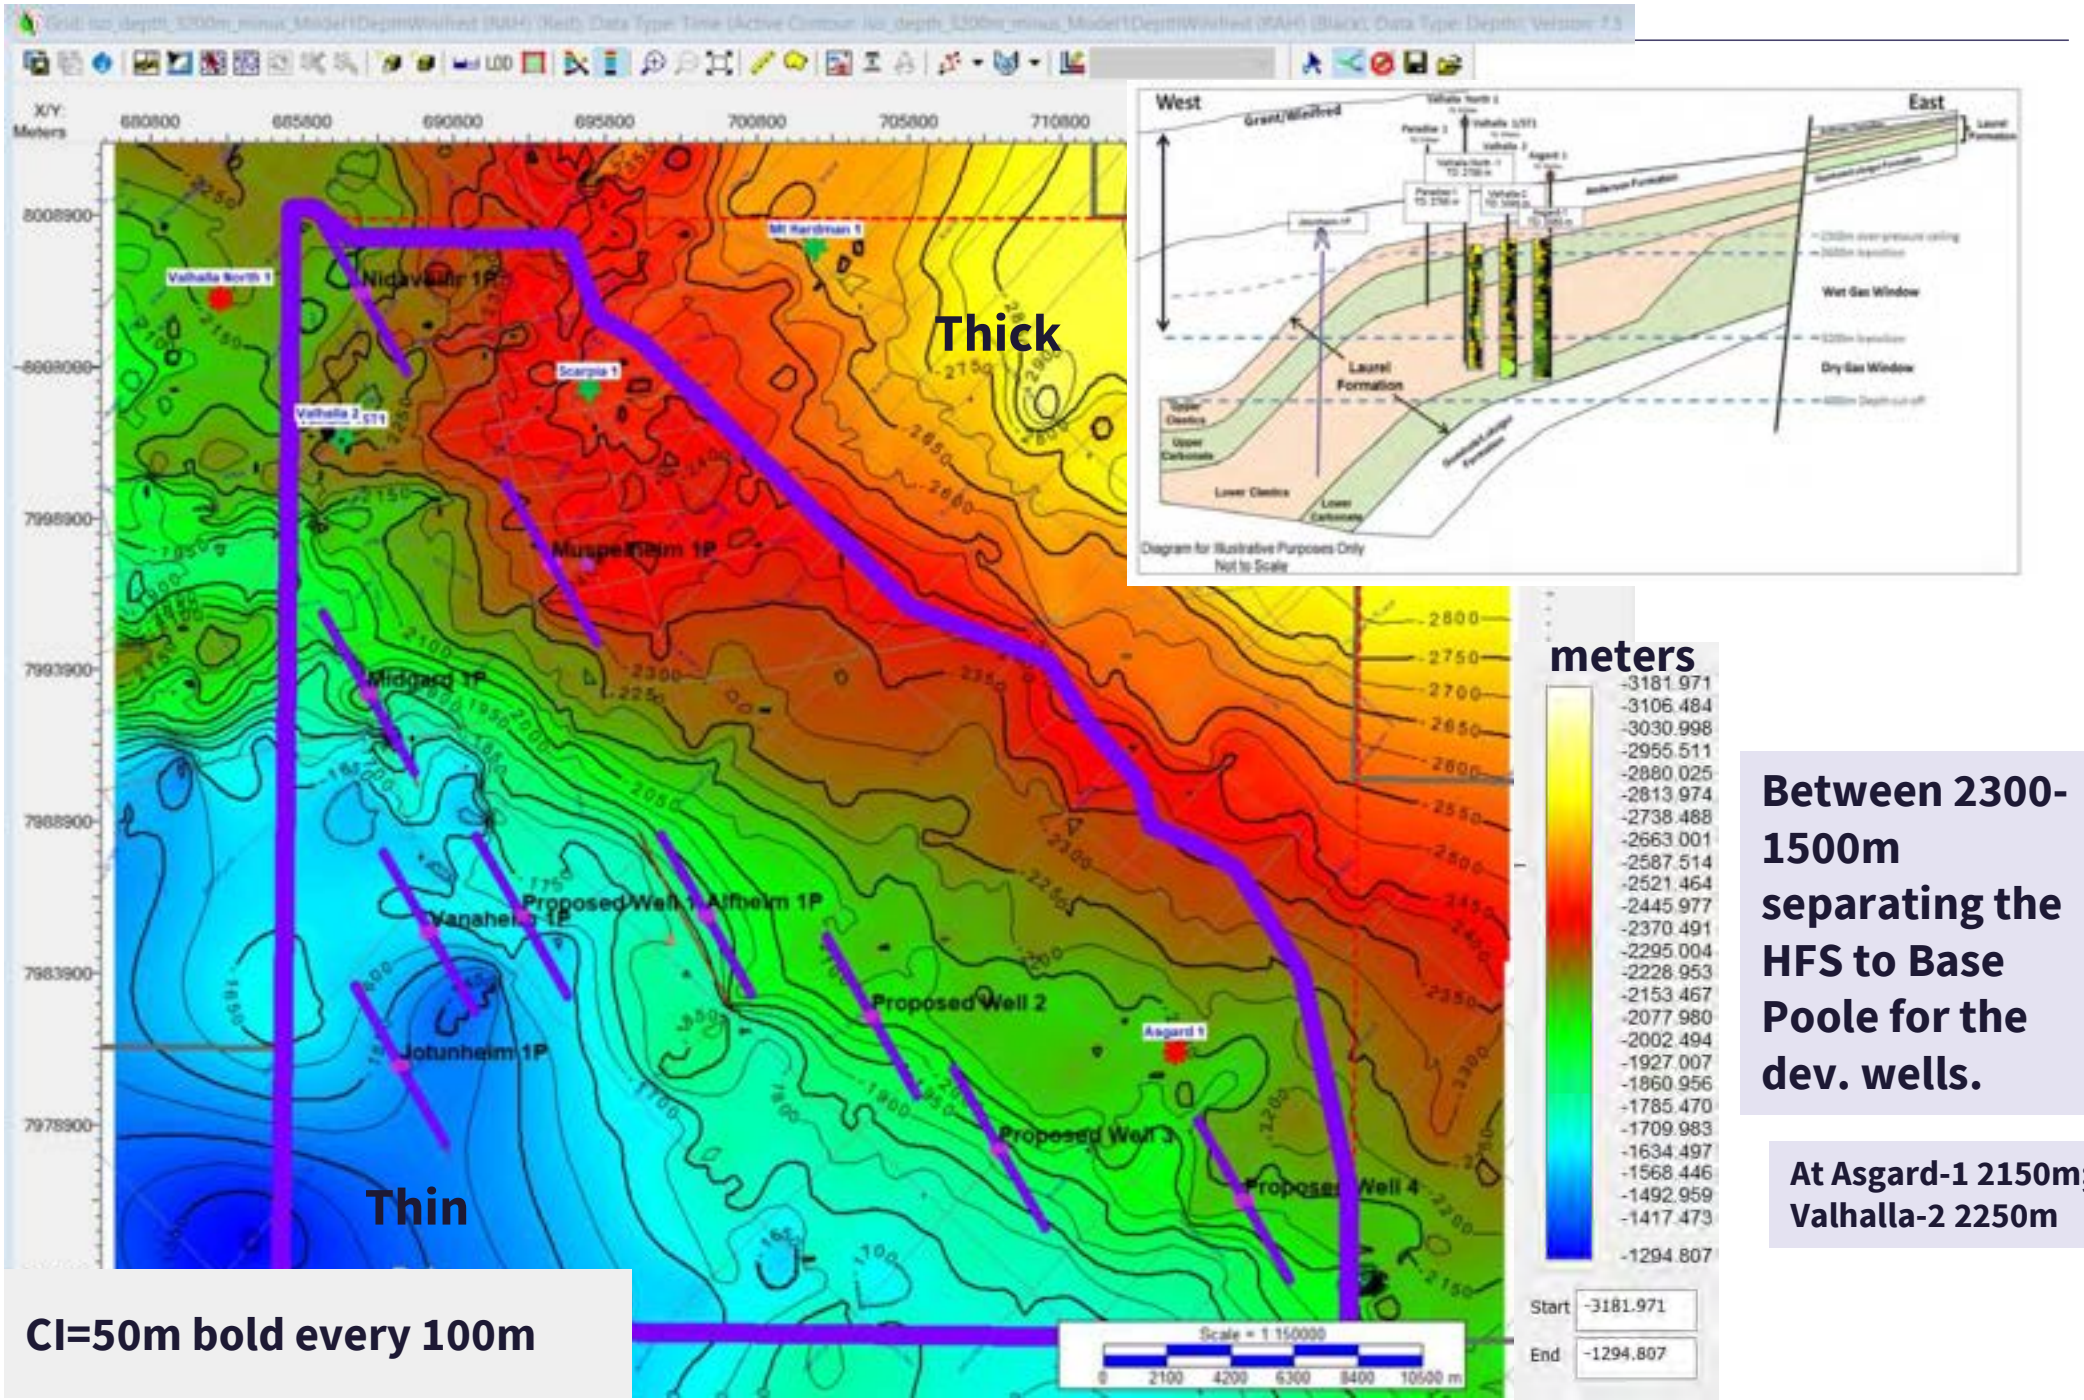
A thinner section from 0m to over 450 m is noted for this non aquifer interval in the development area.

Figure 2 Regional Cross Section illustrating regional lithostratigraphy



Shallowest stimulation depths in excess of 1,550 m from aquifers in use at Asgard -1.
Deeper dry gas in excess of 2,150m from aquifer at Asgard-1.

Figure 3a map showing the lateral variability of offset between the shallowest HFS interval that is likely (3200m) and the base of the deepest aquifer (Poole)/ Top Grant Winifred

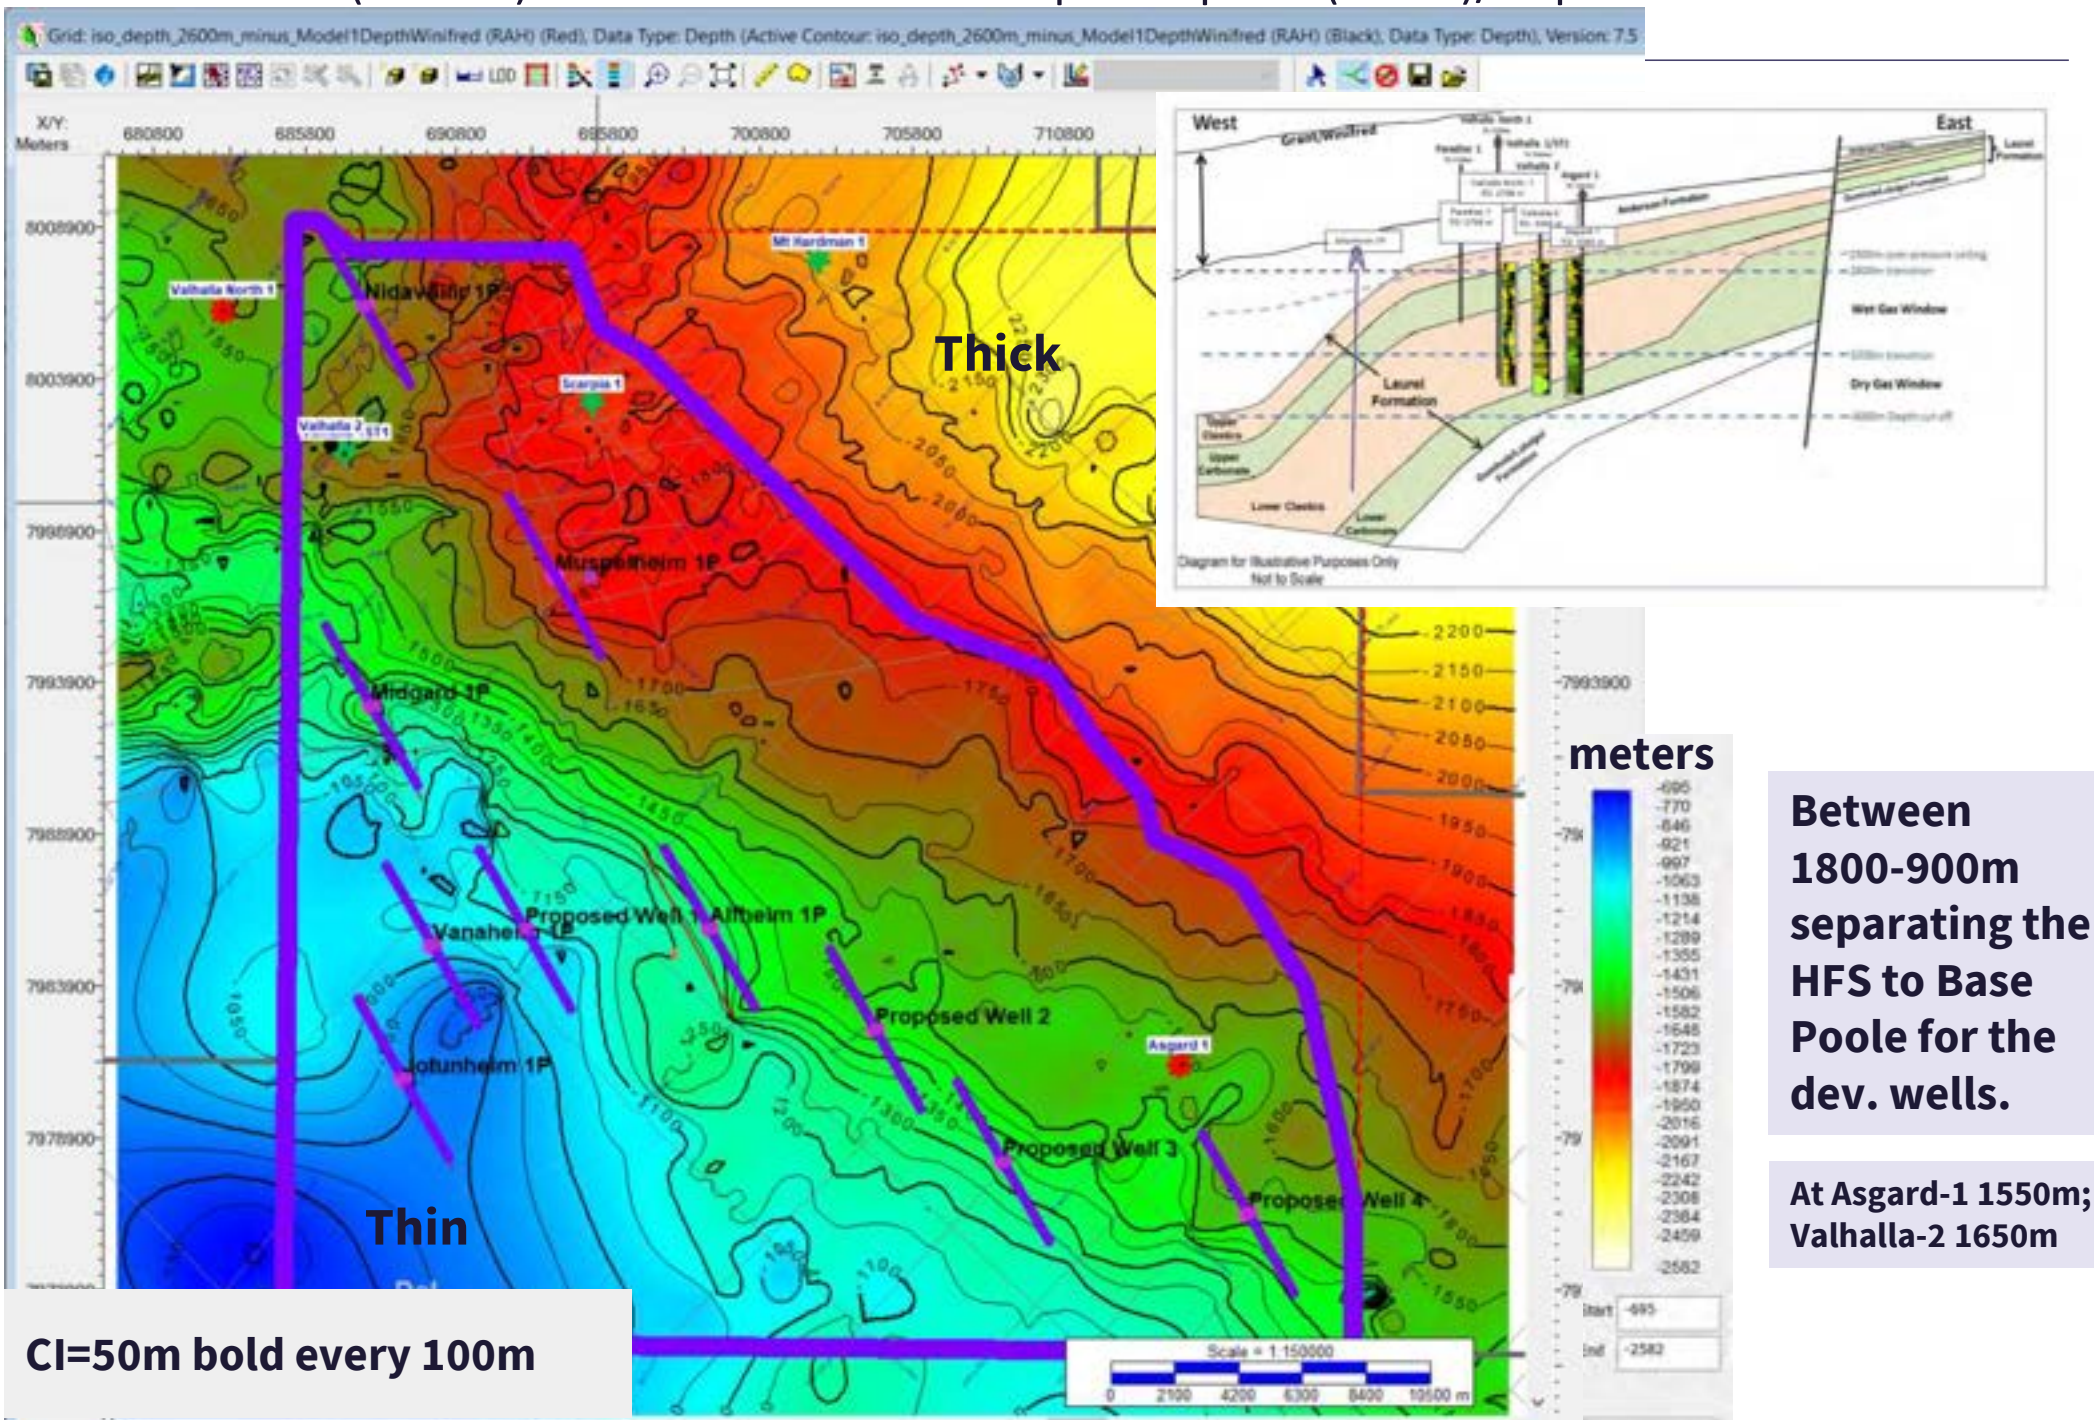


Between 2300-1500m separating the HFS to Base Poole for the dev. wells.

At Asgard-1 2150m; Valhalla-2 2250m

CI=50m bold every 100m

Figure 3b map showing the lateral variability of offset between the shallowest potential HFS interval (2600m) and the base of the deepest aquifer (Poole)/ top Grant Winifred



CI=50m bold every 100m

Between 1800-900m separating the HFS to Base Poole for the dev. wells.

At Asgard-1 1550m; Valhalla-2 1650m

LAUREL STRATIGRAPHIC BENCH MODEL

- Prograding Laurel marine siliciclastics and carbonates were deposited in a transitional ramp setting.
- Key updip vertical have tested producible quantities of thermogenic gas.
- A future well is envisioned targeting downdip upper Laurel reservoirs that are optimal in reservoir quality as well in a dry gas window of higher pressure.

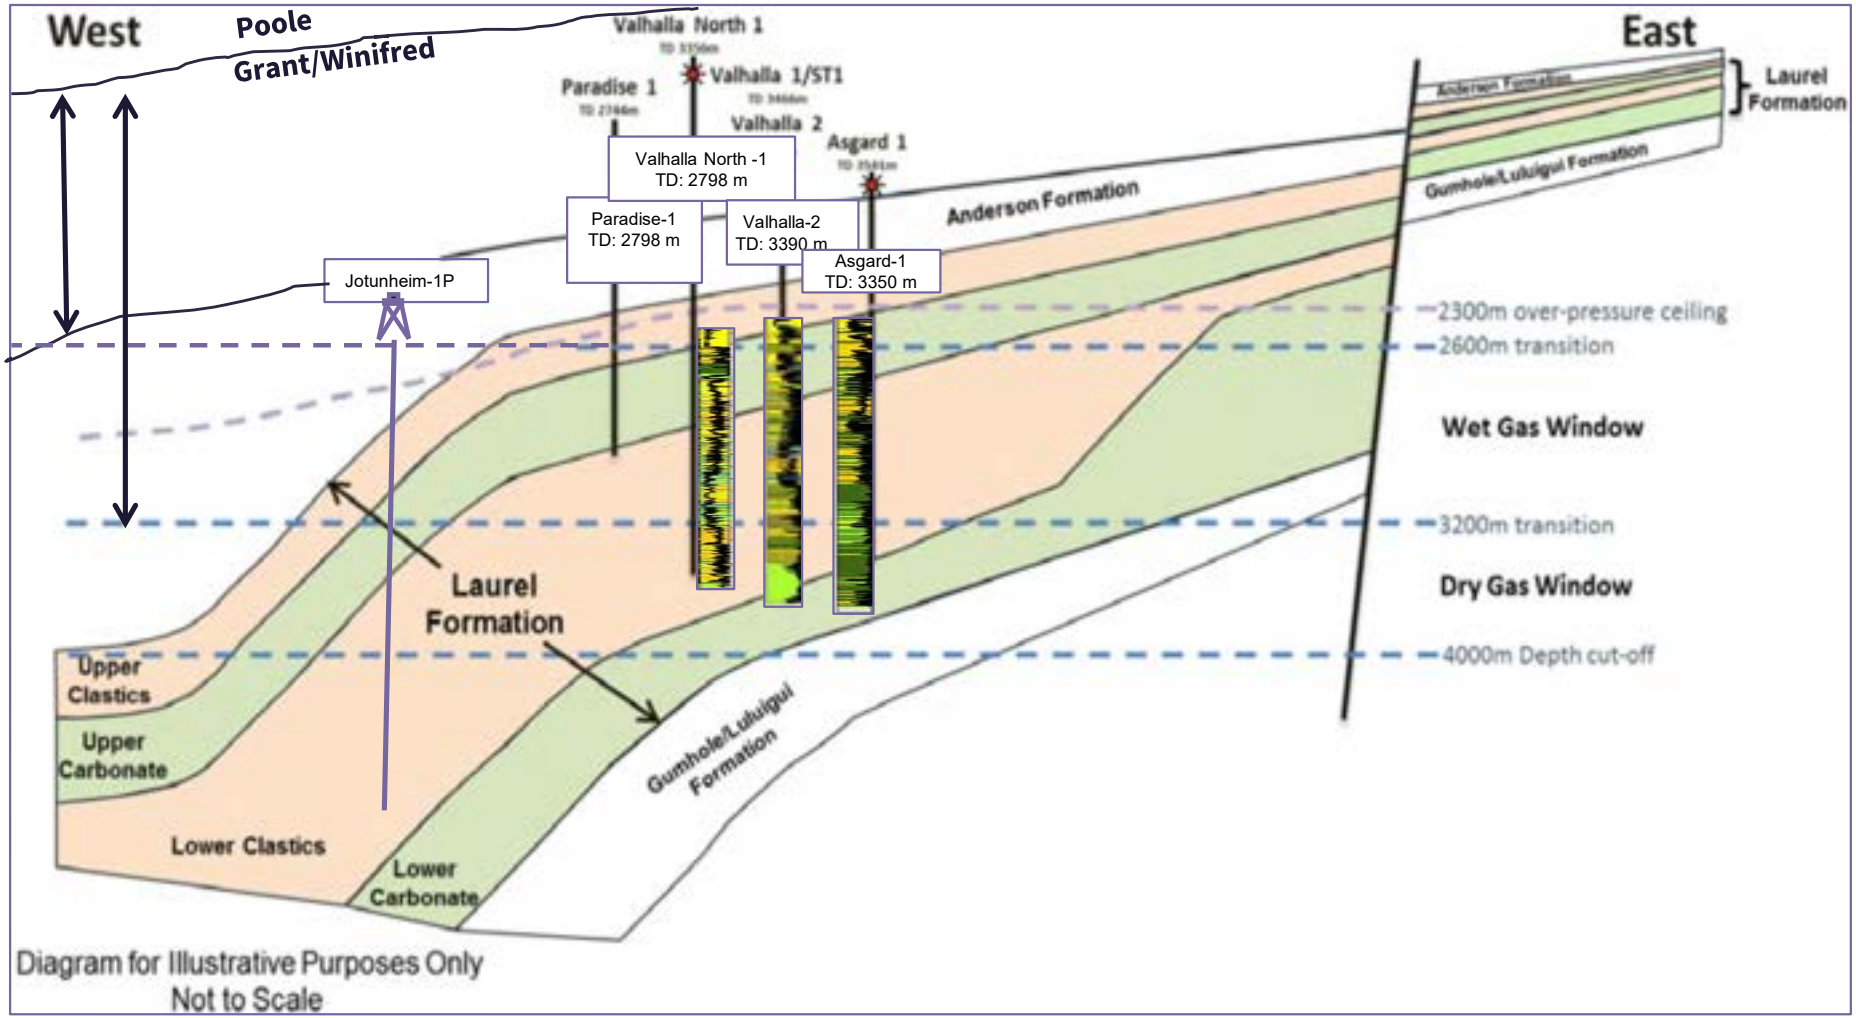


Figure 4

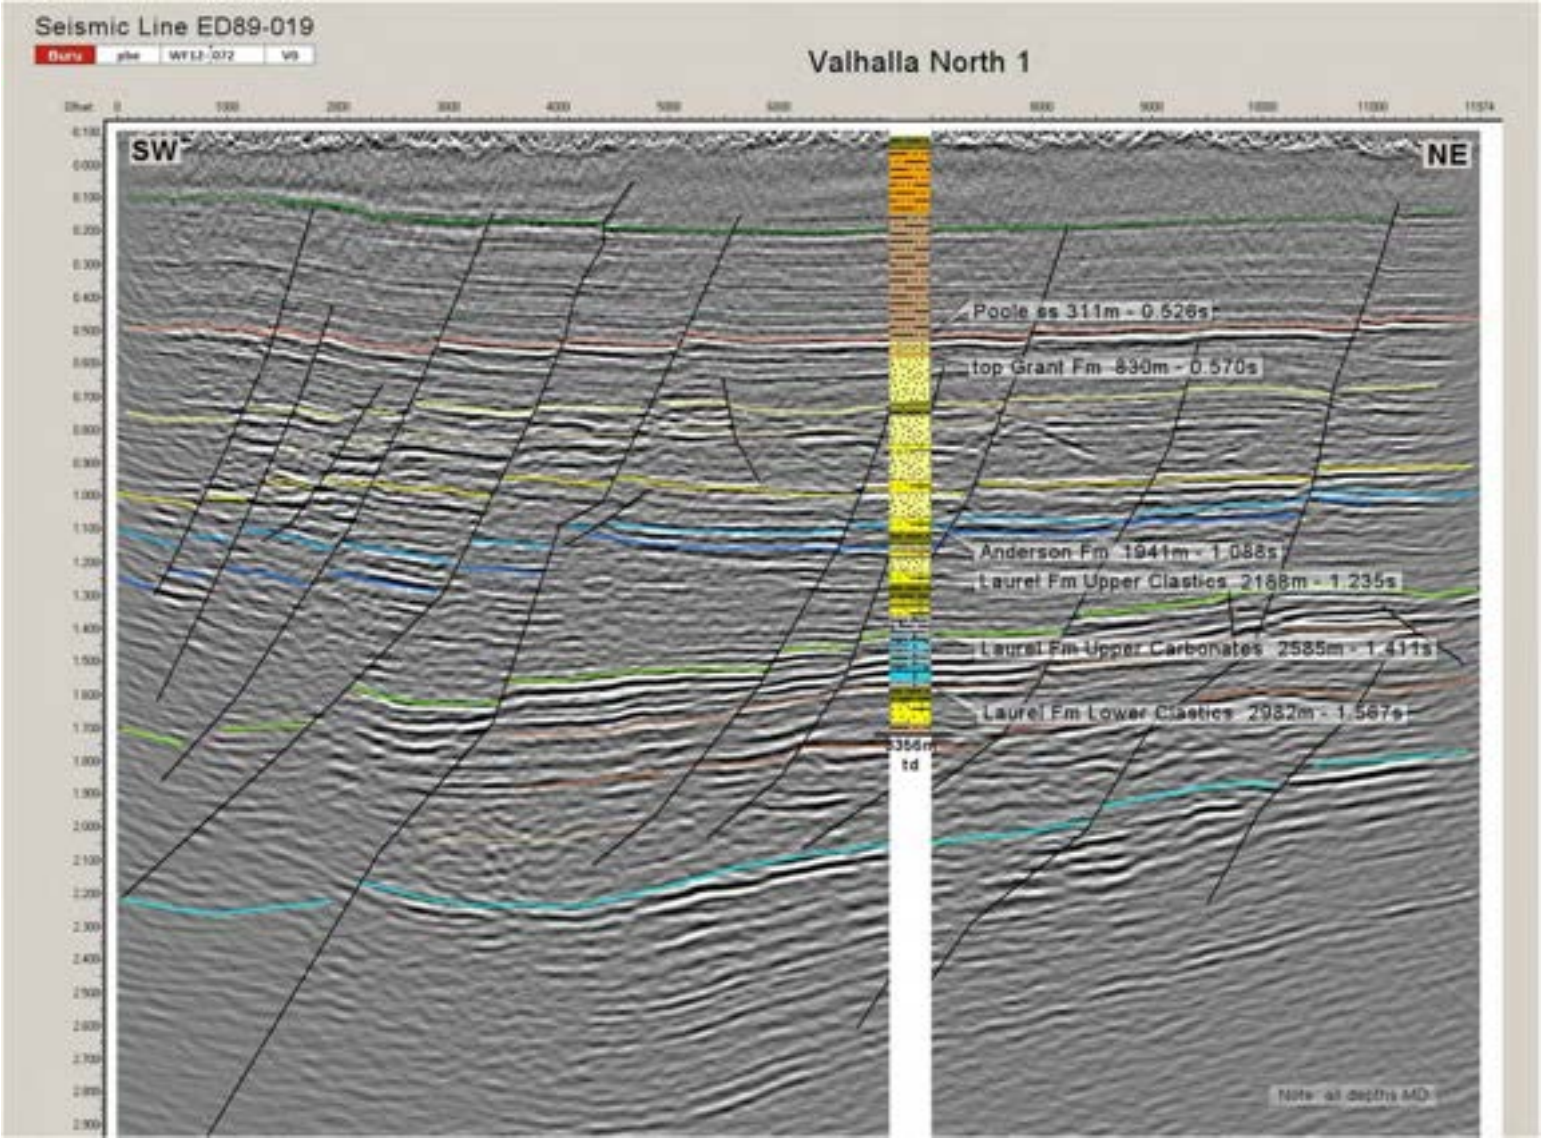
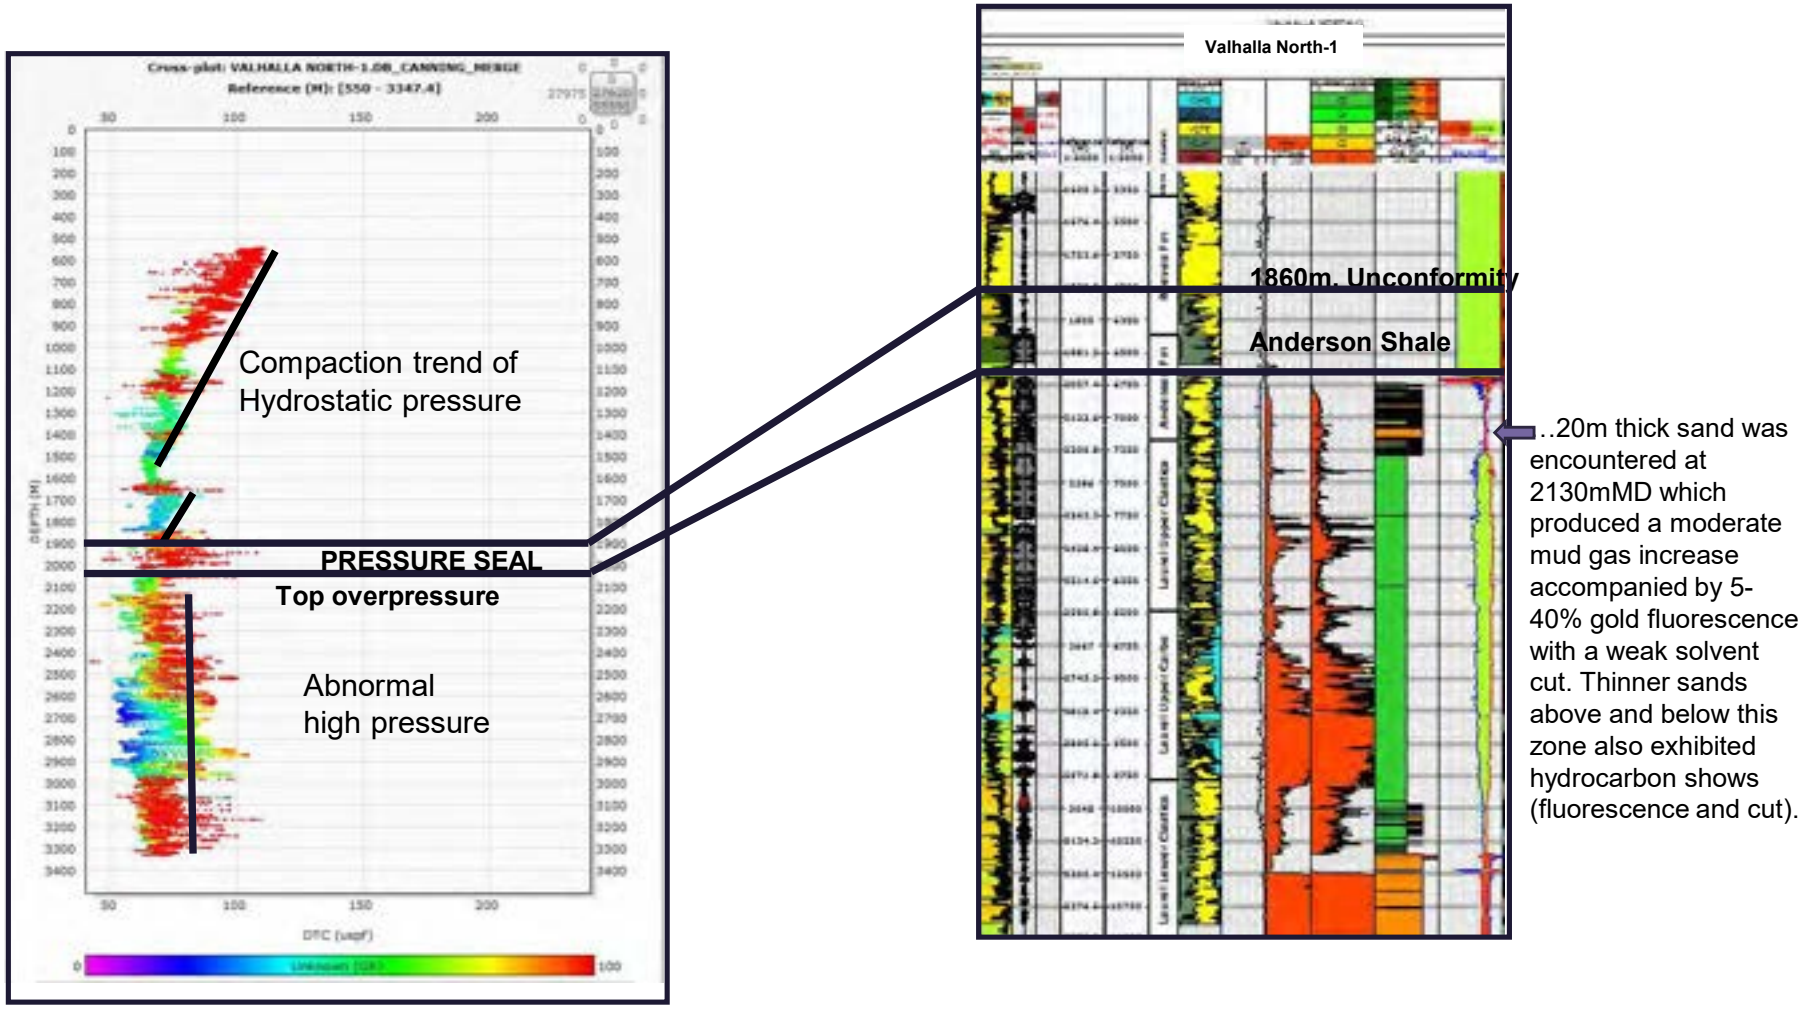
Faults here typically place older units up dip against younger units downdip.

We do not anticipate given the current data any significant juxtaposition against younger (Poole) units updip



Seismic section ED89-019 with Valhalla North 1.

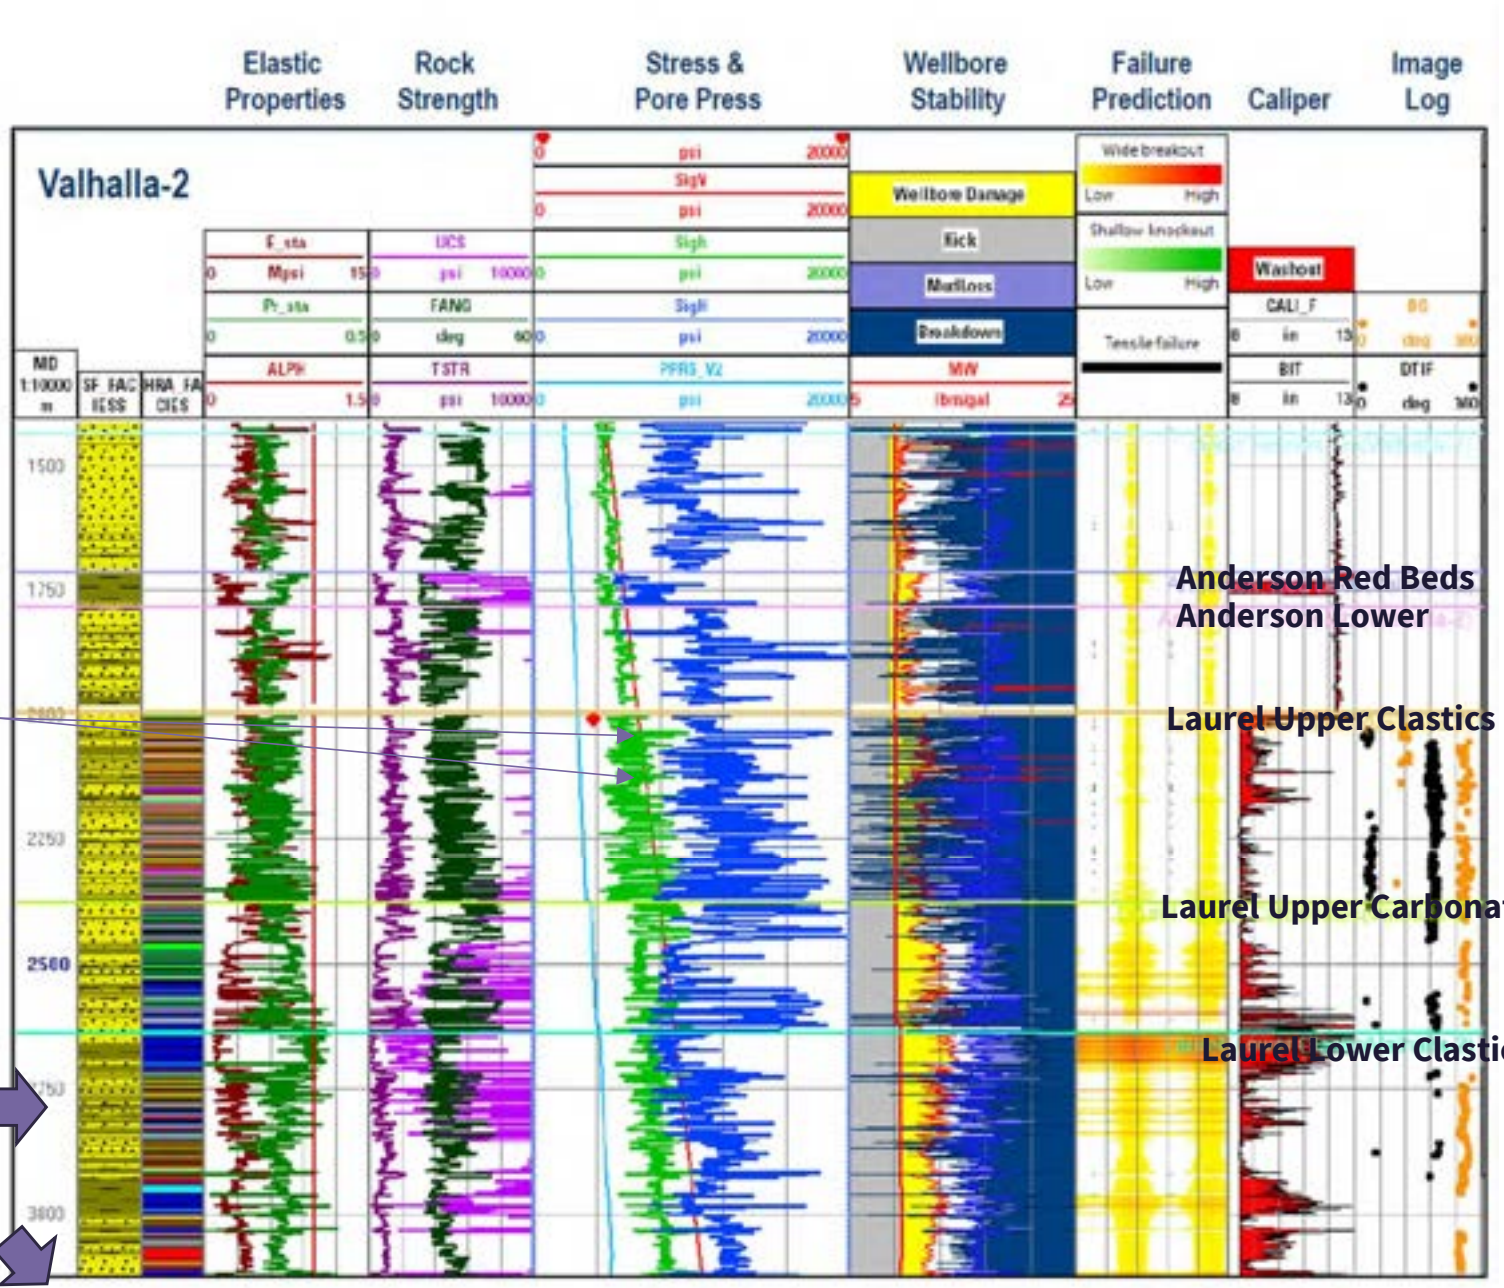
Figure 5 Pressure Seal



Fracturing, Faulting, and Stress

Figure 6: Valhalla 2 Sonic Log

Formations with higher rock strength (UCS) and higher relative stress are found above hydrocarbon targets of interest



High Rock Strength ~ 10,000 PSI

Higher Anticipated Poroelastic Stress

High Rock Strength > 10,000 PSI

A stimulation at 2600m SS (2725 MD)

A stimulation at 3200m SS (3325 MD)

Anderson Red Beds
Anderson Lower

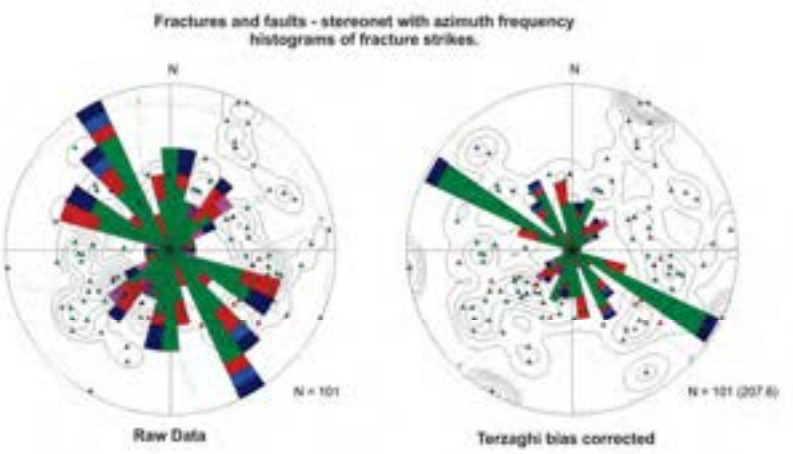
Laurel Upper Clastics

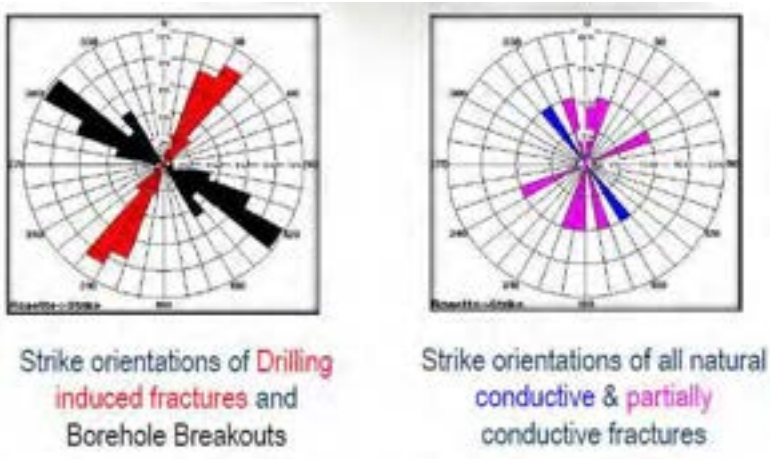
Laurel Upper Carbonates

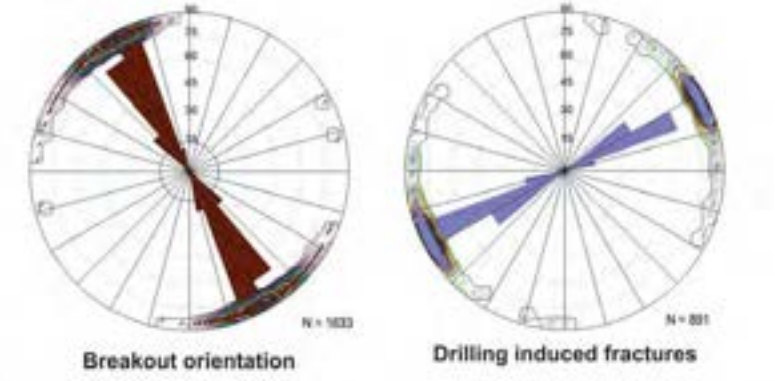
Laurel Lower Clastics

Figure 7: Fracturing/Faulting vs. Stress Direction

- Intense and frequent fracturing and faulting situated 60-90 degrees from SH,max
  - Implications:
    - Ideal orientation to create fracture enhanced system permeability feed-in through crossing fractures
    - Difficulty opening the fractures in tension (mode I), restricting or eliminating the ability to dilate and prop







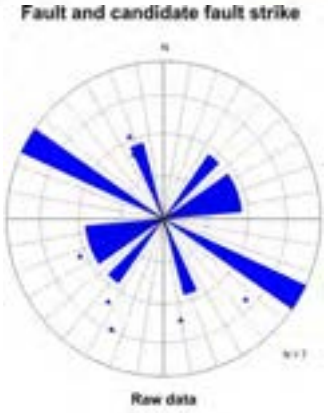


Figure 8: World Stress Map, 2016 Revision

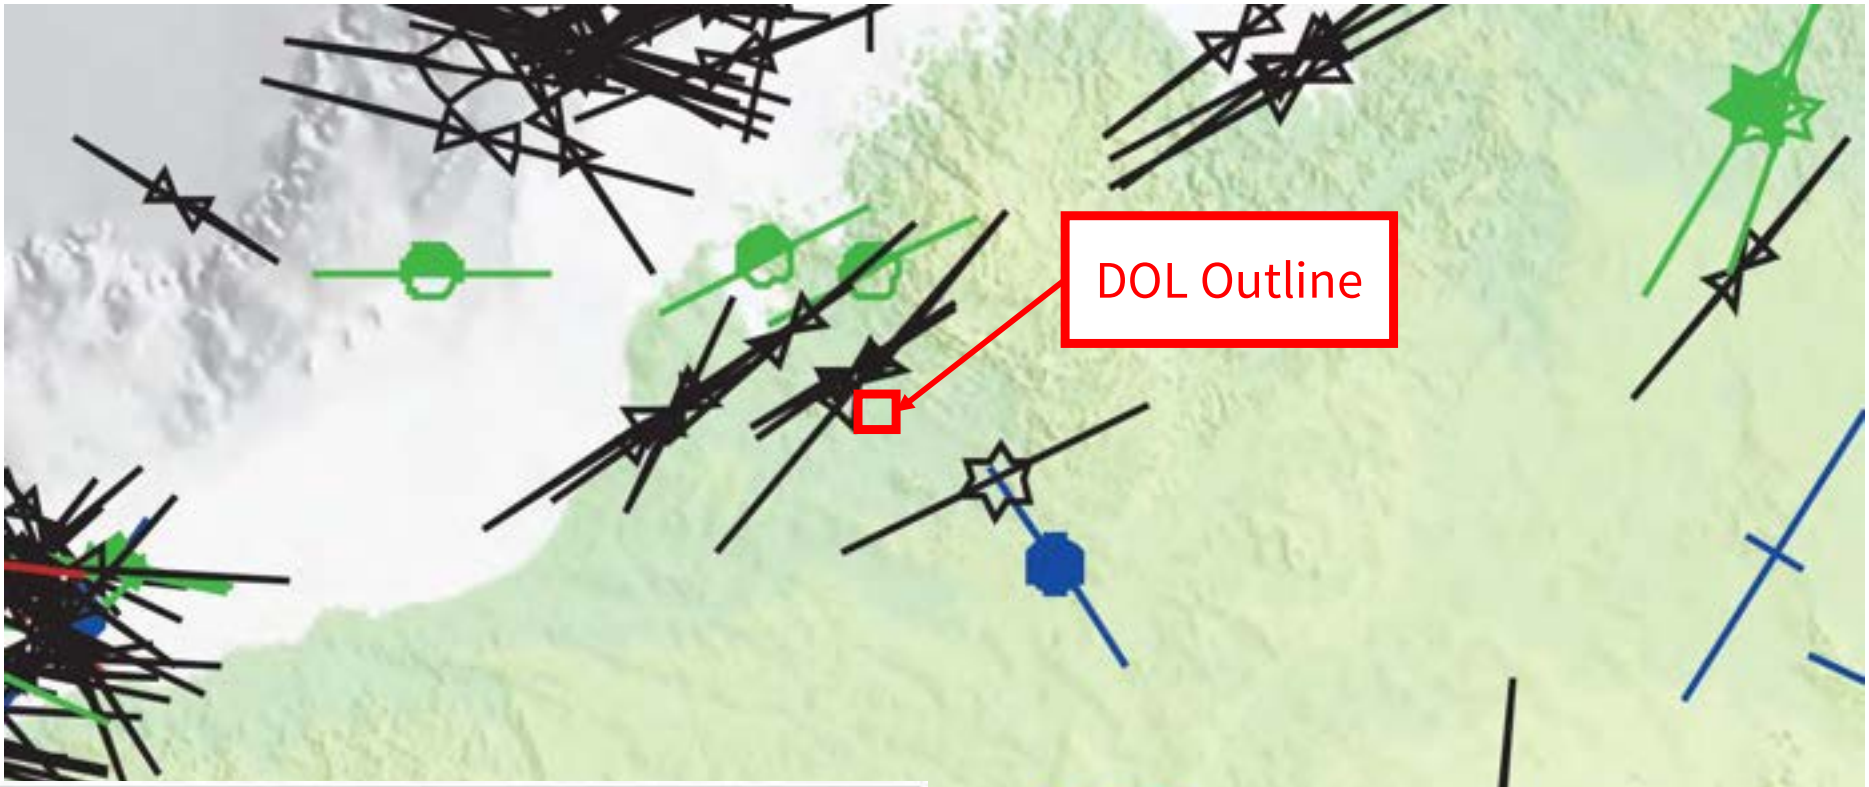

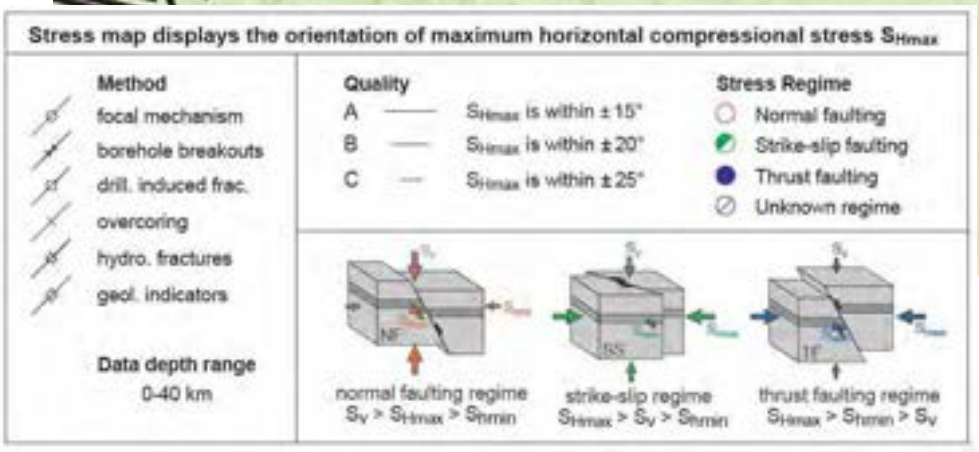

Figure 9: Microseismic Review from Valhalla North 1

- Significant vertical growth, but heights are within range of uncertainties
  - Bulk of microseisms range from 200-300 meters per zone
  - Uncertainty +/- 360 meters

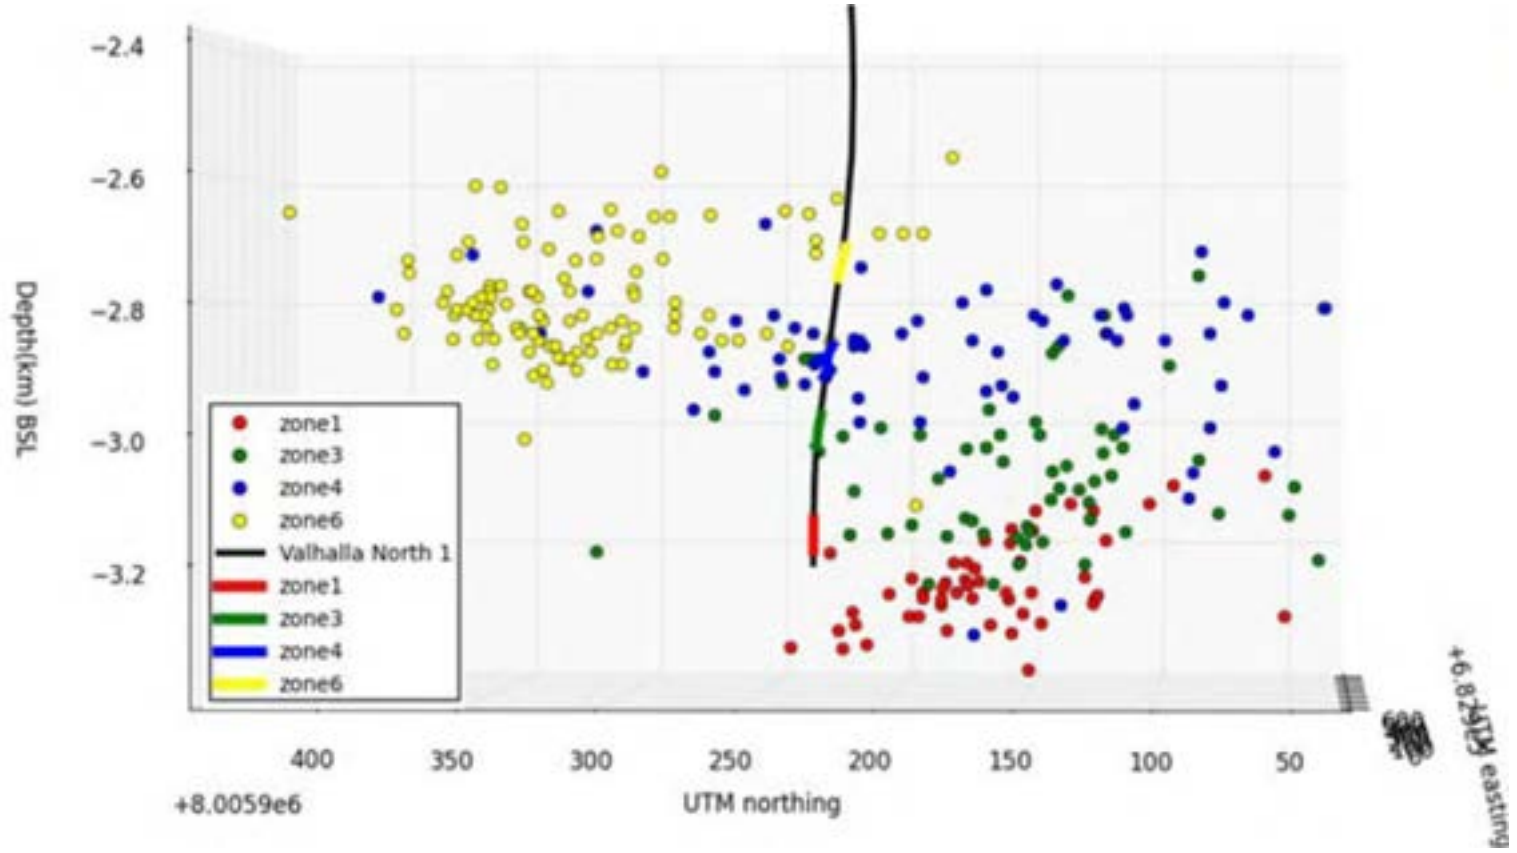

Figure 10: Warpinski 2011: True Vertical Depth in (ft) vs. Aquifer Depth

- 1,000's of feet separate all recorded microseisms and aquifer depths
